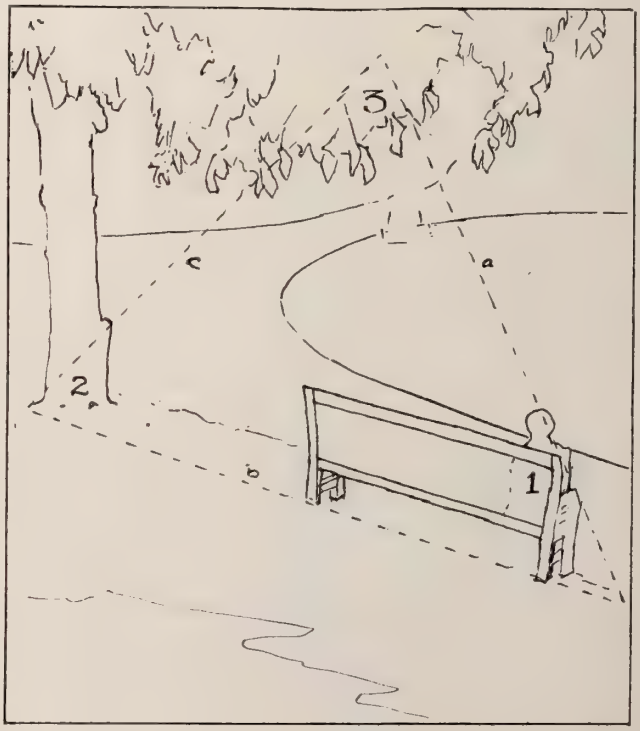
"My plates are desensitised in a Pinacryptol dye and developed, by the aid of a green safelight, in M.Q. developer. They are thoroughly fixed and washed. Any small blemishes on the negative are now touched up with retouching medium and an H pencil.

"For exhibition purposes I make a selection from my negatives taken during the past year. An examination of the proofs will reveal to me if the whole negative should be printed or, as often happens, only a portion. Enlargements are then made on 15×12 paper. I prefer white Kodak Royal for portraits, and for most other subjects I use a fast Chloro-bromide.

"If necessary, parts of the print are shaded during the accurate exposure which is given, and the print developed just to the full in M.Q. developer. This ensures a full range of rich tones. The usual fixing and washing is carried out. After-treatment of the print merely consists of spotting and slightly darkening any obtrusive high-light. The prints are mounted on large white mounts, finished off with a crayon line, and later sent off to the selection committee. My thoughts then turn to next year's pictures and 'things to come'."

CAUGHT IN THE ACT. *A. H. Durrant.*

(A further example of Mr. Durrant's work is reproduced on one of the centre Art pages.)



Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"WAITING," *by H. W. Lambert.*

REFERENCE has often been made in these columns to the desirability of placing the principal item or centre of interest well "in" the picture. The rule, in the ordinary run of cases, is to place the centre of interest on or as near as possible to one of the points of intersection formed by divisions of thirds vertically and horizontally.

But it has also been remarked that there is nothing arbitrary about it, and, upon occasion and if it is justified by the nature of the subject, it is possible to make a very considerable departure from one of the positions in question without impairing the success of the arrangement. Even so, it is extremely rare to find a centre of interest placed so near the edge as in this instance. The function is served by the figure of the girl (1), and, as will be seen, she is in a position virtually on the margin of the print. If there were no accents of importance elsewhere, or if the setting were unrelieved, such a placing would be definitely unacceptable. It would look wrong, and would actually be wrong. Even if the factor of human interest were strong enough to confer principality, it would still fail to achieve that sense of completeness that we are entitled to expect a finished picture to display, and the failure to adhere to the rule would involve a self-evident weakness in the arrangement.

Here, however, justification for the unusual nature of the placing is to be found in the fact that there are two points of lesser attraction which are so disposed as to afford a reasonable balance to the point (1). These are the base of the tree trunk (2) and the group of points of light in the foliage at (3).

(2) is somewhat nearer to the left-hand edge than (1) is to the right. Its presence tends to draw the attention momentarily to the left, and, in so doing, to create something in the nature of an illusion that (1) is more "in" the picture than it is. Its pull, however, is slight in comparison with the figure, and, by itself, it is not sufficient to create an adequate balance. The attraction at (3) is a bit more forceful, but, alone, it would be little more effective than (2). The two points (2 and 3), together, manage to offset and balance the placing of (1), partly because they both pull away from the right-hand side along the respective directions of (b) and (a) and partly because, in conjunction with (c), they seem to suggest a triangular formation which encloses, and therefore unites, the three points of interest.

The unification of these three points, especially having regard to the suggested triangle, entitles them to be viewed as a group, and, compositionally, it might be said that it is the group that counts and not so much the individual elements of which it is composed. If this assumption be agreed, the group could be taken as being suitably placed in the picture space, for it is somewhat more to one side than the other and one of the aforesaid points of intersection, and one only, is enclosed. That one is nearest to the figure (1) and it would seem legitimate to take it that it lends the required accentuation.

As it happens, there is some support for the idea of the triangular formation in the direction assumed by the bench, which lies along the line (b), and in the line of the edge of the path, which connects (1) and (3), but by a less direct route.

Viewed from this latter standpoint, it might be argued that the arrangement has been made to accord with the conventions of composition and there is no departure from the accepted form. The connection between the points, however, is inclined to be tenuous, and, although the impression does retain some influence, it is questionable if it is strong enough to be thoroughly maintained.

The first alternative—relying upon the balancing accents—seems the sounder on analysis, but, in practice, it is more likely that the disposition of the material was determined simply on the ground that it looked well and seemed to fill the picture space acceptably, or, put in another way, it was more a matter of instinctive judgment than conscious construction.

It is undeniably successful, and it could be wished that the rendering of the effect, on which the subject depends for its pictorial appeal, were equally well brought out. In the existing rendering, the sunshine seems to lack brightness and vigour, and the reason seems to lie in a measure of over-printing. However, this is a matter that could very easily be corrected in another edition, and, now that attention has been drawn to the fact, it will doubtless be done.

The picture has the added advantage of suggesting experiments in the direction of departing more or less from the accepted "rules" of composition. Such essays are often of great interest.

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

COWS, AND OTHER THINGS.

HAVING an intention to say something about my first experiences of hand-camera work as compared with what it is now, I made a search for one or two early negatives, few of which have escaped destruction. Fig. 1 is from a negative made with the first hand-camera I ever had.

It was made of cardboard and cloth, with a single lens, and a one-speed shutter worked with an elastic band ; and the whole outfit cost fifteen shillings. I thought it a marvel. And in many ways it certainly was, being possessed by seven devils.

I have shown the whole of the negative. Two edges were covered in the slide so as to waste as much space as the whole area of some modern negatives. The other two sides were exposed to the edges, and these frequently frilled unless we rubbed a bit of wax candle along them.

Fig. 1.

Fig. 2.

This stopped the frilling, and at the same time distributed bits of wax over the surface, and these stopped development where they lodged.

It will be seen from the illustration that the definition was good in the middle, but soon degenerated ; and that the lens did not cover the corners. The fog at the bottom was due to the leaky character of the slides. It was a marvellous camera. Now in looking up this negative I unearthed several others full of nothing but cows, and I decided to postpone my remarks on early hand-camera work and ask myself the question, " Why photograph cows ? "

I know why I took those in Fig. 1. That absurd and shoddy camera, in my estimation, worked wonders. I photographed all sorts of things just to see them " come

Fig. 3.

out." I don't know which were worse, my subjects or my negatives; but whatever the subject, the negative, if it "came out," was a thrilling and wonderful thing. I knew nothing about other people's negatives, but I am sure there were very few as dense and contrasty as mine, which often had to be printed in bright sunlight to get an image on P.O.P. Of course cows were worth photographing, and everything else as well.

Long after I had become more fastidious about subjects I must have taken the cows in Figs. 2 and 3. At that time I was using my first long-focus lens on a reflex. Even cows looked fine on the screen—and so did everything else. In Fig. 2, the four principal cows are not bad, but there are bits of three others. Fig. 3 is worse.

Fig. 4 is easily the best of the bunch, but I cannot think of any valid excuse for taking it.

To the farmer and stockbreeder, or to a dairyman, photographs of cows, as single specimens or in herds, may well be not only interesting but valuable. In that case, by all means let us photograph them to the best of our ability. We may also take them just for practice, as it were, or because we are still in the stage where it is wonderful and exciting to photograph anything. But the mistake beginners make is to suppose that their cow portraits, just because they have "come out," are fit and proper subjects for pictorial competition purposes.

Cows are often valuable subsidiary objects in landscape pictures. A recent striking example was Stuart Black's "Cowscape" at the R.P.S. It was really a cloudscape, but the humorous title was justified, because the cows made the picture.

Fig. 4.

This does not affect my contention that such things as the four cow subjects here have no real "pictorial" significance whatever. The cows are quite nice creatures, and their surroundings are natural and pleasant, but the prints are trifling records, and not pictures.

Of course, my cows are a symbol. When I put the question, "Why photograph cows?" I could substitute scores of other nouns for "cows." In all its forms it is an important question; and it would help us to better things if we put it to ourselves before making an exposure, if we have any idea of getting a result that shall be more than a mere photographic record. When we look at a proposed subject we should consider whether, after all, it is only a "cow."

W. L. F. W.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

41. BROMIDE PAPER

THE most popular of enlargement papers, bromide is the fastest and is available in a large number of contrast grades as well as surface finishes.

Because of its speed to actinic light, all bromides must be handled in deep yellow, orange or red safelight.

The contrast grades usually available are:—

1. Soft.—For use with negatives which are either harsh in contrast or dense. It has the longest scale of tones of all the bromide range and, consequently, calls for correct exposure and development. It is also the fastest regarding printing speed.
2. Normal.—For use with normal contrast negatives, that is, negatives of correct exposure and development. About half the speed of the soft variety.
3. Medium.—For use with negatives that are not quite up to the normal standard.
4. Contrasty or Vigorous.—Suitable for negatives which are under-exposed and/or under-developed. Printing speed approximately two-thirds or half that of normal.
5. Extra Contrasty.—The most contrasty of all the grades and suitable for only very weak and under-exposed negatives. Also suitable for copying line work.

Bromide prints intended for subsequent toning should always be correctly exposed and fully developed, that is, until no further details can be seen to appear in the high-lights. This will ensure that the toning will be of good quality and consistent throughout the print.

Developers suitable for bromide papers are to be found in No. 2 (Metol-Hydroquinone) and No. 9 (Amidol) in this series.

If difficulty is found in determining the emulsion side of the bromide paper, particularly in the case of matt papers, place a corner of the bromide paper between the lips and it will be found that the emulsion side will tend to adhere to one of them.

After development, the print should be rinsed for a few seconds in clean water and then placed in the fixing-bath of 4 oz. hypo to 20 oz. water (see No. 3 of this series).

The prints should be kept moving in the fixing-bath for about ten to fifteen minutes and then washed thoroughly for about thirty for single-weight prints and about sixty minutes for double-weight prints.

Blot off superfluous moisture and hang to dry.

42. BROMOIL

BROMIDE prints or enlargements for converting into bromoils should be correctly exposed, fully developed and of a good colour with an adequate range of tones. While it is possible to make bromoils from poor bromide prints, the finest bromoils are always made from good black-and-white bromide prints. Several manufacturers make bromide papers specially for bromoil, and these should be used where possible, although bromide prints made on any good paper may be used. The bromide prints should be thoroughly washed and free from hypo and preferably dried before bleaching.

Bleachers.

10 per cent copper sulphate solution ..	6 drm.
10 per cent potassium bichromate solution	2 drm.
10 per cent potassium bromide solution	4 drm.
Pure hydrochloric acid	2 drops.
Water to	10 oz.
or	
A. Copper chloride	¼ oz.
Sodium chloride	2½ oz.
Hydrochloric acid	3 drops.
Water to	10 oz.
B. Potassium bichromate	50 grs.
Water to	10 oz.

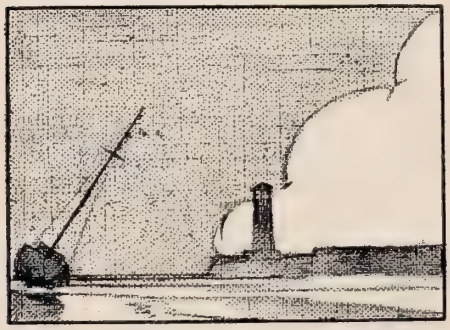
For use take A, 1 part; B, 1 part; water, 2 parts.

After bleaching in either of the above—which should be used at 65 to 75 degrees Fahr.—the print is well washed for ten minutes to remove yellow stain, and then fixed in plain hypo (1 oz. to 20 oz. water). After a final wash for half an hour the print may be dried, or pigmenting proceeded with at once.

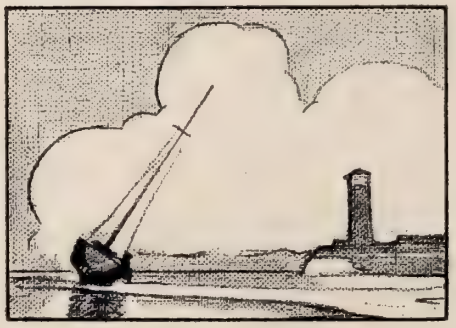
If the bleached print is dried it must be soaked in water at a temperature of about 75 degrees Fahr. for half an hour before pigmenting.

After pigmenting, drying the finished bromoil can be hastened by soaking the print in methylated spirit for five minutes and hanging up in a warm current of air.

Picture Points



No. 21 (New Series) *by RICARDO*



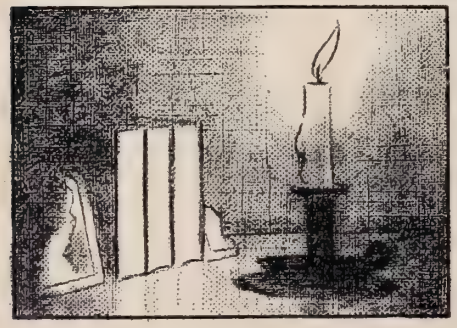
Sloping Lines.

IN last week's "Picture Points" we discussed the danger of allowing lines in the foreground to fall away at the corners of the print, thus causing a feeling of insecurity and divided interest. We have now a similar problem, that of sloping lines when they appear near the edge of the print.

In the first sketch, the eye is attracted out of the left-hand side of the picture because of the lack of space between the boat and the edge of the print. If we take a viewpoint more to the left, such as suggested in the lower sketch, and so include more space between the base of the sloping line and the edge of the print, we have a better chance of maintaining interest in the picture. Although the subject in this print is a boat, the same principle applies to any subject where a strong line or form is sloping outwards and is near the edge of the print, particularly if there are no opposing lines to restore the direction towards the middle of the picture.

Wherever a print includes one or more sloping lines, particularly if they are at varying angles, it is a great help towards preserving a sense of stability in the print, if a vertical subject, such as that suggested by the lighthouse, can be included.

Relevancy in the Subject Matter.



IT is not enough that a picture, of no matter what subject, shall consist only of good composition and good photographic technique, but that if two or more objects are included, they must be suitably related to each other in the natural order of things. This is best understood by referring to the two sketches above. Wholly unrelated subjects like the plant, decanter and glasses in the top sketch are by no means uncommon in beginners' prints. Perhaps there is a greater temptation when composing a picture such as a still-life subject to keep adding to the number of objects instead of eliminating and simplifying the group. With subjects like landscapes, where one *selects* and does not arrange the various items in the pictures, the danger of including irrelevant objects is not so great. No matter how good the composition or technique may be in such a print, the fact that the subjects are quite unrelated to each other is enough to weaken its appeal. One does not usually associate these articles together, therefore it is equally unsuitable to group them together.

Another instance of irrelevancy, although by no means so common as the top sketch, is shown in the dog study. Here it is little short of being ridiculous, as there is no reasonable chance that an animal could be associated with such articles of clothing. Although there is not the slightest doubt that it was amusing to the owner of the dog, it is not a suitable subject for a pictorial print, and constitutes only a "record" print.

Under-exposure and Inadequate Lighting.

THE immediate reaction to a print similar to that in the left-hand sketch would be to say that the negative was under-exposed, because the details in the shadows are missing. The age-old advice of exposing for the shadows is sound, but unless there is sufficient light to illuminate the shadows any amount of over-exposure will be futile. The result would be that the lightest tones would become dense and unprintable in the negative, while the shadows would remain as blank as ever and a contrasty print be inevitable.

With such a subject as illustrated on the left, where a single *point* of light was the only illuminant, it is clearly a matter of inadequate lighting, and not so much under-exposure. Some secondary source of lighting is essential, and although it is not advisable to have two lights showing in the picture, the subsidiary lighting should be to one side, the left, so that it would relieve the shadows and so provide the complete contours of the books, as well as revealing the modelling of the candlestick. This is shown in the right-hand sketch.

It is quite probable that the group illuminated by only one light looked quite attractive to the eye, but it must be remembered that as the eye wanders from the high-lights to the shadows, the iris of the eye is automatically and unknowingly adjusting itself to the light. But the lens sees everything at once, and the only way to compensate for this is to provide extra lighting so that the lens will "see" into the shadows sufficiently to register the details.

Granville PRODUCTS PRODUCE BETTER PICTURES

Whether used by the novice, the advanced worker or the professional, GRANVILLE PRODUCTS ensure the maximum results with the minimum effort. Every day we receive testimonials from new customers who are surprised and delighted—surprised at the quality obtained at such a low price—delighted with the ease in which such perfect pictures are obtained. If you are just beginning, start right with " GRANVILLE " ; if you have years of experience, change to " GRANVILLE." You will never change again !

"THE GRANVILLE GUIDE"

This new publication is a superb 16-page de luxe illustrated edition. Specially issued for users of Granville Photographic Products, it contains up-to-date working instructions, formulæ, and many useful articles specially written by our own experts. A complete list of all materials is also given, including many new lines. If you have never communicated with us before, **write to-day for your copy.** Applications should be addressed to : PUBLISHING DEPARTMENT, Granville Gulliman & Co., Ltd., P.O. Box 3, Leamington Spa.

If you have previously communicated with us, please do not apply, as a copy will be sent to you.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents, not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Opening of the Winter Ciné Season

By "ACTINOGRAPHIST."

WITH the coming of darker months, amateur ciné activities are wont to find their expression in different though still attractive outlets. Production work is ceasing to hold the field; and, in its place, renewed interest will be taken in lectures, projection and the general indoor activities of a healthy movement.

As an incentive to greater participation in all these, the unattached worker is strongly urged to link up with his local club or society. Here he will usually find a congenial atmosphere, scope for working on the more important products of co-operation and—above all—opportunities for making contact with helpful suggestions and new ideas.

It is not suggested, of course, that the new-comer should long remain a "passenger" or become a retarding influence to society activities. More than one society does, indeed, suffer from a preponderance of this class of member—which perhaps explains why the positive output of such bodies is appreciable only in the work of three or four real enthusiasts.

To overcome this, the beginner or new member should take early steps to demonstrate his enthusiasm. He should not hesitate to join in society discussions from the very outset. Nor should he be afraid to advance criticism. It is part of his job to see that his club is justifying the place it holds in the movement. It is part of his job at all times to raise his voice in furtherance of approved objects.

After all, societies thrive on keen enthusiasm; nor would it be the first time that the introduction of "new blood" has come as a spur to the flagging energies of older members.

One of the main features in which enthusiastic members can advance the welfare of their club concerns the matter of programme selection. Generally, a programme should not be too technical or exacting; nor, on the other hand, should it fail through a too-lavish attention to the demand for "entertainment."

The happy medium here implies a programme that will afford to memberships the utmost technical and filmic training without any tendency to boredom, or to that falling-off of interest which invariably follows when the training is too severe.

And, apart from the well-recognised advantages of enlivened study, it should not be forgotten that before entering the club-room most members have probably expended a good deal of energy in following the very exacting duties of vocation.

For a remedy, it is advisable as often as possible to combine instructional lectures with shows of good films. Thus the evening could open with the screening of one of the "classic" films of the movement—and this could be followed by a capable lecture-criticism.

Again, the lecturer could open the evening with a selected talk, a film or films being subsequently shown to illustrate the major points raised. Only occasionally should the show of films be omitted; and at such times its place should be taken by a general discussion (to which the lecturer should reply).

Extreme care should be used in the selection of speakers, though most of those available in the field of cinematography are good. So, too, the best lecturers will usually visit a serious society without fee; and, being busy people, they like to select from alternative dates. Incidentally, lecturers who have good films to their credit are always infinitely better than those who have no films but abundant "theories" and prejudices.

Projection-night films come to societies through the "inter-loan" method and also through the activities of display sub-committees. In the case of the first, which seldom purport to be outstanding or even good films, members show a keen interest and indulge in friendly criticism. The others, however, are selected from the whole of available output; they create actual excitement, and the date of their showing is always eagerly awaited.

In these circumstances, then, it behoves those responsible to select the films with due care. Particularly should they attend a previous showing of any doubtful production before inflicting it upon their full memberships. The knowledge that any film has secured an award is no adequate criterion, for not only is the standard of competition sometimes appallingly low, but it is also on record that some of our most outstanding productions emanate from workers who do not engage in the competitions.

Misty autumn mornings at the seaside, now that the "tripper" season is over, are often productive of striking effects, such as the above, that would provide a good action subject for the ciné worker.

A Hint When Making Ciné Sub-Titles

By D. ALDWYN JAMES.

THE average amateur cinematographer puts the letters composing the title, or sub-title, against a plain black or white background. There is no doubt that this procedure assists in making the letters show up better. But to use this method of titling thoughout a production is too monotonous, and gives an impression of lacking in imagination.

In the "silent" days, when viewing professional productions, this fact was very noticeable. Plain backgrounds were rarely used, but instead scenic or pictorial ones. This method of technique had the effect of strengthening the meaning of the title in the minds of the audience.

The professional studio has facilities denied to the amateur, but a little ingenuity can compensate, sometimes, for lack of resources available to another.

Every week *The Amateur Photographer* gives beautiful pictures in the art pages of the journal. The variety is such that practically every subject is covered by examples. Therefore, by using any one of these pictures as an appropriate background to a title, the title itself becomes something more than a collection of words.

As most amateur ciné films are produced for purely private exhibition it is not likely that objection would be raised by the owners of the copyrights for infringements. But, in any case, if permission was asked, for the purpose stated, it would in all probability be readily granted.

It will be appreciated that by utilising the art pages of *The Amateur Photographer* in the above manner an immense improvement in the technique of presenting titles and sub-titles is bound to make itself evident.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, October 14th.

Battersea Men's Inst. C.C. Demonstration of Roll Film Developing.
Birkenhead P.A. Criticism of Competitions 1 and 2.
Birmingham P.S. (Ciné Sec.). "The Applications of Cinematography." J. Fraser.
Brighton and Hove C.C. "Exposure Systems." J. Radford.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

LACE Photography *with a* Miniature Camera

A Fascinating Indoor Subject for the Amateur Photographer.

By PAUL I. SMITH.

LACE is probably one of the most difficult materials to photograph if the enlarged bromide print is to bear a very close resemblance to the original. Electric light, although convenient, is inclined to be rather hard and to exaggerate the contrast. It is, however, possible to obtain good results if the bulbs or reflectors are draped with butter muslin so as to give a softly diffused light, but it must be bright enough to add sparkle to the lace. My method of photographing lace is to pin it on to a blackboard which I place in a sunny room so that it is evenly illuminated, but it is possible to obtain different effects by altering slightly the angle of light on the subject.

Silk and Cotton Allover Lace.

Silk Lace Flouncing.

Experiments with my miniature reflex (Ikoflex II) have convinced me that excellent results may be obtained by the use of this and similar cameras when supplementary lenses are attached and a fairly small stop employed. By using one of these cameras taking twelve negatives on an eight-exposure film working costs are greatly reduced, and each exposure need only take a minute or less with small stop and filter.

A filter is necessary, and I use a coloured disc of gelatine (Gamma, Ilford), which I place between the first and second components of the lens. The exposure has to be increased six times, but this is no great inconvenience when using the fairly rapid fine-grain panchromatic films. My own favourite film is "Panatomic," which I find gives me negatives rich in detail and of sufficient contrast to give sparkling prints and enlargements on glossy paper.

The exposure has to be carefully calculated, and I always give double the exposure obtained by using an accurate meter. The reason for this strange departure from the orthodox is that the use of modern fine-grain developers necessitates an increase in exposure if moderately plucky negatives are to be produced. I use Johnson's Fine-grain Developer generally.

This little-practised branch of amateur photography is very fascinating, and, with a little care, the miniature-camera enthusiast can obtain prints of quite remarkable beauty and technical value.

Two-tone Silk Lace Flouncing.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Tripod Bushes.

Can you advise me on altering the tripod bush on my camera so that it will fit my tripod? H. E. (Brighton.)

You do not say which is the larger of the two, the camera socket or the tripod screw. We presume that although the two screw threads are different in size they are each the standard screw thread adopted for both British and Continental cameras. The larger thread is $\frac{3}{8}$-in. Whitworth, and the smaller screw thread is $\frac{1}{4}$-in. Whitworth. If your camera has the larger thread, you can obtain an adapting bush at most photographic dealers for a few pence. If it is too long, it should be sawn in half and a saw-cut be made across it for the purpose of screwing it into the camera socket with a screwdriver. The bush should then be screwed in as hard as possible to prevent it from becoming unscrewed and remaining on the tripod screw. If the tripod screw is the larger, instead, then you have no alternative but to obtain a special tripod head adapter that usually costs about 1s. or 2s.

Water-Bath Development.

What is the method of developing negatives by the water bath? What kind of developer is used? J. D. (Watford.)

The water-bath method of developing negatives is very useful where the utmost detail is required in the negative, where it is desired to flatten out the tone contrast and, to some extent, for underexposed negatives. The procedure is briefly this: the plate is first immersed in a normal strength developer for about ten seconds and is then transferred to a bath of plain water and allowed to remain there undisturbed for about two minutes. It is then given another short immersion of about 20 seconds in the developer and replaced in the water bath for a further two minutes. After this, another short development is given, this time for about 40 to 60 seconds and is followed by a third water bath of two minutes. These times are only approximate, and need to be adjusted to suit varying circumstances, but are approximate for an M.Q. developer at 65° Fahr. for a medium contrast negative. Almost any of the usual non-staining developers can be used with the exception of pyro, as the prolonged immersion causes a pronounced stain. It is essential to remember that while the negatives are in the water bath, the dish must on no account be rocked.

Hydroquinone Developers.

As I do not wish to use metol, is it possible to make up a developer with hydroquinone for bromides? T. T. V. (Dorchester.)

The following formula will make up a developer that works quite well:—

Water	.. 30 oz.
Hydroquinone ..	.. 100 grs.
Sodium sulphite ..	.. 200 grs.
Sodium carbonate ..	.. 3½ oz.
Potassium bromide	.. 3 grs.

Drying Contact Prints.

Can you suggest a practical method of drying a quantity of gaslight prints, without having to pin them up and so that they will not curl in drying? H. N. (Godstone.)

Obtain some fine muslin, large enough to accommodate all the prints that are likely to be dried at once, and after washing it to ensure absolute cleanliness, attach each of the two opposite sides to a rod or cane. This will provide a sort of horizontal net that can be suspended by cords attached to each rod. After washing, lay each print face downwards on the fabric and it will be found to dry reasonably flat, in a very short time, especially if the net is suspended near the ceiling in a warm room. The net can afterwards be rolled up, like a ciné screen, and conveniently stored away.

Firework Photography.

What exposures and materials do you suggest suitable for firework displays? F. K. S. (Southend.)

If you wish to avoid movement of the flames or sparks then it will call for an instantaneous shutter speed fast enough to suit the subject. Fortunately, there is usually very little gradation between bright light and deep shadow in a firework show, so that under-exposure is not such a bugbear as with the more usual subjects. It will, however, be found that if a time exposure is made, a very good effect can often be obtained by including several different displays of rockets, etc. Panchromatic material is ideal for this work, but the fast "chrome" films will be quite good for all subjects where orange and red do not predominate.

Lens Hoods.

What is the right length of lens hood to use for a quarter-plate camera? J. C. D. (Douglas.)

Even if you had supplied the focal length of the lens to be used on the camera and stated whether a rising lens panel was fitted, as well as giving the diameter of the lens hood (assuming that a round hood is to be used), we could only give you an approximate length of lens hood to use By far the most satisfactory way is to begin with a generous length of tube, say 2-in., and after placing it in position on the lens, point the camera to any even area of light, preferably the sky. Examine carefully the focussing screen and note if the corners are darker than the middle. If so, shorten the tube until the corners are equally as bright as the centre. As an extra check, stop down the lens, which will show any dark corners more clearly by a more pronounced line. If a rising and cross front is fitted to the camera, move the lens panel as far out of the centre as it is ever likely to be used when making exposures.

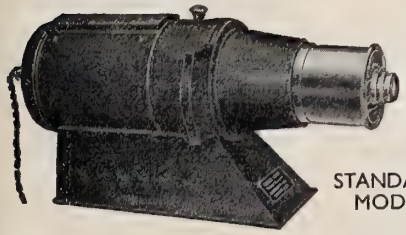
Anastigmat Lens.

What does the term "anastigmat" mean when applied to a photographic lens? L. J. (London.)

An *an*astigmat lens is one that has been corrected for astigmatism, the inability of a lens to give sharp definition of both horizontal and vertical lines at the same time, particularly when they appear near the edge of the plate or field of illumination.

Compur Shutter.

Will any harm come to a Compur shutter if the outside ring is adjusted so that the indicator comes between two markings? Would the shutter exposure be something between the two stated times? B. T. (Wolverhampton.)



We understand that it is quite in order for a Compur shutter to be set *anywhere* on the ring, up to the 1/100th, whether on a stated speed or in between any two marks, and that the speed will be in proportion to the position. That is to say, if the shutter pointer were set between ½ and 1/5th, it would be approximately 1/3rd of a second. This does not apply in any of the speeds past 1/100th, and it is not advisable to move the indicator ring after the shutter has been "set" at the fastest speed, particularly with the "Rapid Compur."

ENSIGN

HORIZONTAL MAGNAPRINT

SUPER-SPEED CONDENSER ENLARGER

THE IDEAL ENLARGER FOR THE BEGINNER

STANDARD MODEL

Designed on the standard lines of all other Magnaprint Enlargers, and at a price to enable anyone to start the very fascinating practice of enlarging with sound and efficient apparatus at a very moderate cost.

MINIATURE MODEL

Model H/0. For all miniature negatives. Fitted with Ensar F/6.3 Enlarging Anastigmat with orange cap and 3-in. condenser..... £2 : 17 : 6

STANDARD MODELS

H/1. For 3¼×2¼ and all smaller negatives. Fitted with Ensar F/6.3 Enlarging Anastigmat and 4½-in. condenser ..... £5 : 5 : 0

H/2. For ¼-plate and all smaller negatives, fitted with Ensar F/6.3 Enlarging Anastigmat and 6-in. condenser ..... £7 : 10 : 0

Lamps. (G) SILVALUX OPAL 100-watt for H/1, 3/2; 150-watt, for H/2, 4/10. State voltage when ordering.

ENSIGN ENLARGING EASELS

FOR USE WITH ALL HORIZONTAL ENLARGERS

No. 0.

Size 16×13 in. with 15×12 in. chart and paper clamps 7/6

No. 1.

Size 16×13 in. with board pivoting for vertical or horizontal on stand—with paper clamps and chart 12/6

No. 2.

Size 16×13 in. with board pivoting for vertical or horizontal on ball-and-socket head, allowing for correction of lines in all directions. With stand, paper clamps and sizes chart 17/6

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

About HALIE *Screens*

THE provision of simple means whereby a photographic image may be modified for the purpose of artistic effect considerably widens the scope of pictorial photography. It is, after all, the personal touch given by a photographer to his work which causes its value and character; the Halie screens will be found to be most useful in the search for special artistic effects. The critical worker will find that their use enables him to give a particular character to his prints, while the most ordinary of photographs can often be materially improved by using a judiciously chosen printing screen.

The names given to Halie screens must not be taken to reflect on the photographic result or the craft after which the screen is named. The various screens are called "etching," "painting," and so on merely because these names indicate the general type of result obtained, and not because by their use a photograph may be made to imitate an etching or an oil painting. However greatly a photographic image is modified, it must never be forgotten that the result is still photographic and has no bearing on other graphic arts whatever.

Photographers to-day require prints which are not hard in contrast, but which present a pleasing softness. Such results are usually produced by expensive soft-focus lenses or mechanical diffusing devices such as ruled discs, but many photographers cannot afford these luxuries. Added to this, most photographers—particularly amateurs—use small negative sizes and experience grain to some extent in enlarging, so that the ideal device for softening contrast should also be capable of producing a regular grain in the print rather than the irregular grain produced by the negative. By simply placing one of the Halie screens over the printing paper during the printing or enlarging process the image is given a character which makes it different and more pleasing to the eye than a "straight" print.

Halie Soft Grain Screens.

Three screens are available:

A. Fine grain, for slight softening.
B. Medium grain, with an effect similar to that of a printed picture.
C. Coarse grain, for strong and massive effects.

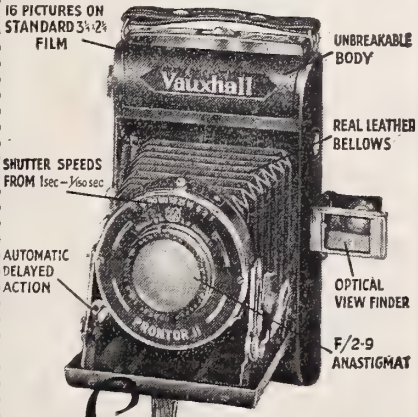
These screens render retouching unnecessary.

The Halie Etching Screen.

The size and width of the lines increase progressively with the size of the screen, so that the image character appears the same when prints of various sizes are viewed from their proper distances. All sizes up to 10×8 are provided with a black border, giving a white edge to the print.

Halie Oil Painting Screens.

This printing screen produces an image of characteristic and unique appearance: soft, irregular and very plastic. All monotonous flat areas in the negative are broken up and enlivened in a remarkable way. Supplied in two grades, Soft and Coarse.



Halie Linen Screens.

These screens give a fine linen texture effect to the print, giving the impression of being printed on linen cloth. Supplied in pairs, one each of "fine," and "coarse" texture, in a folder.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%

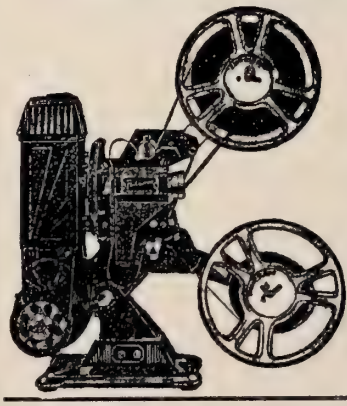
All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.



Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

This is the Leading Ciné House in the Country—

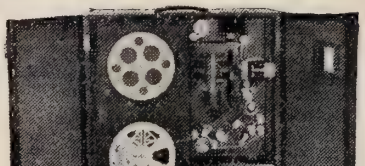
We were originally a **Professional Film House** dealing exclusively with Production of 35-mm. film and supply of theatre apparatus.

Our energies are devoted now exclusively to the needs of the *Amateur Cinematographer*, and this unrivalled experience is at your service. We supply every good make of sub-standard apparatus, and will be pleased to help you make a suitable choice.

PATHÉSCOPE 200-B

9.5-mm.

This is the finest value obtainable in a 9.5-mm. projector. Brilliant steady picture up to 9 ft. if desired, fan-cooled 200-watt lamp. Motor rewind. Takes the standard 300-ft. spools.



Price, for use on 100 volts.

£15:0:0

Or 12 payments of 26/3.

Resistance for 200/250 volts 35/-.

GEBESCOPE 16-mm. Sound Projector

The best talkie available, with an extensive library and modern films for hire, i.e., all the Tom Walls and Ralph Lynn series, "The Iron Duke," and hundreds of others.

Demonstration in any part of the country.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

NOTICE

On July 20th, 1936, at 8.50 a.m., opposite the ROYAL ACADEMY in PICCADILLY, the latest and most up-to-date Photographic Showrooms and Ciné Theatre were opened by Messrs. Precision Cameras Ltd., and in order to advertise our unique establishment still more widely we are offering each week one second-hand or soiled instrument, tested and guaranteed, at precisely the figure we paid for it. This week's bargain is a KODASCOPE D PROJECTOR, complete and barely soiled, for **£16.** The Catalogue price is £25.

Watch this space for next week's announcement.

9, PICCADILLY ARCADE, S.W.1
(Opposite the Royal Academy). Phone: Regent 5225.

Optochrom
LIGHT FILTERS

OPTOCHROM Yellow Glass Filters are for use with orthochromatic plates or films. The REFORM Filter is graduated from clear glass to deep yellow.
The U.V. Filter is for use on snow or distant mountain subjects. No extra exposure is necessary when using a Reform or U.V. Filter.
OPTOCHROM Universal Green Glass Filters, Nos. 1 and 2, are for daylight exposures on panchromatic material.
OPTOCHROM Blue Glass Filters are for artificial light exposures on panchromatic material.
OPTOCHROM Red Glass Filters are recommended when extreme contrast is required, also for Infra-red emulsions.

The NEW
"SUPRAMIN"
Finest of Fine-grain Developer.
The ONLY Non-poisonous, Non-staining Paraphenylene Diamine Developer.
NEW FEATURES—only obtainable from
"SUPRAMIN"

- Compensates for variations in exposures and produces uniform gradation.
- Can be used repeatedly. One 36-oz. carton will develop 4 to 6 Leica films.
- Requires no increase of exposure.
- Keeps perfectly in solution.
- Gives still finer grain.
- Negatives can be intensified and retain finest grain.

COMPLETE Development Chart. No increase of price.

This Book will Help you to Pass the Driving Test!

MOTOR DRIVING MADE EASY

By

R. F. BROAD

and the TECHNICAL STAFF of "THE AUTOCAR"

Fifth Edition

All aspiring motorists who have to pass the driving test will find this handbook of great practical help.

It deals with the correct manipulation of controls of every kind, and explains the handling of cars with free-wheel transmission, synchromesh gears, pre-selection gears, and fluid flywheel transmission. Advice is given on what to do in emergencies and the motorist's legal responsibilities are set forth in simple language.

Size 7½×5 inches. 158 pages. Bound in paper boards with attractive coloured jacket

PRICE: 2/6 net **By Post 2/9**

HEAR the LATEST TALKIES DEMONSTRATED at BOND ST

Our new model theatre at 127, New Bond Street is equipped for you to hear a demonstration in comfort. We have all the latest apparatus. Exchanges and Deferred Terms are arranged on any instrument.

DE VRY.—The first 16-mm. Sound Projector with the famous sprocket intermittent and silent chain drive. **No lost loops,** so frequent with the claw movement. Operates in an enclosed oil system. Has radio-type illuminated control dials. Has double sound filter to ensure even flow of all sound frequencies. 1,000-watt concentrated filament lamp. Complete in two carrying-cases.... **165 gns.**

" 138 " FILMOSOUND.—Filmosound is sold complete in one case. In use, the combined projector and amplifier unit is removed from the case, while the cover serves as the baffle for the self-contained loud-speaker. Two models are available, the 138A, with 500-watt lamp and two film speeds (for running either silent or sound films), and the 138B, with 750-watt lamp, which operates at sound speed only..... **£138 0 0**

" GEBESCOPE " MODEL B.—16-mm. portable sound equipment, composed of two carrying-cases—one containing the projector unit and the other twin moving-coil speakers. Shows remarkably clear pictures 10 ft. wide at a distance of 70 ft. Gives splendid volume, and is excellent for an audience of about 150 people..... **£135 0 0**

Any Model on Easy Terms.

FILM LIBRARIES.—All the latest sound-on-film productions can be hired at moderate rates from our extensive library. Write us now—expert unbiased advice willingly given.

...AND SEE ALL THE LATEST PROJECTORS

The AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

3D

The Journal for Everybody with a Camera

Vol. LXXXII. Wednesday, October 21st, 1936. No. 2502.

shows to what a high artistic level photography can rise when the camera is a Rolleiflex. Approaching his subject from an unusual angle this Rolleiflex owner has made a study full of atmosphere—one feels the dignity and the implicit faith of the old lady. It is a first-class piece of character portrayal—done without even showing the sitter's face. . . . Because of its unique construction and its all-round ability, the Rolleiflex can make a masterpiece out of any subject you care to tackle. You see your picture actual size, right way up on the focussing screen, a great asset in getting good composition and interesting detail. All controls can be manipulated while focussing and composing so that you can shoot at exactly the right minute. Takes 12 pictures on 3¼×2¼ roll film for 1/-. Zeiss Tessar f/3.5 lens and Compur shutter speeded to 1/500th sec., T. and B. **£25.**

This after-dark picture was taken with a "Brownie"

3 "Photoflood" Lamps in "Kodaflector" Reflectors were used, at the positions and distances shown in the diagram. Exposure: 1 sec. f.11. Camera: Six-20 "Brownie."

Plug a 'Photoflood' Lamp or two into the ordinary electric sockets, touch a switch, and a brilliant, highly actinic light is instantly at your command —at any time, in any room where electricity is available. Handy little 'Kodaflector' Reflectors enable you to use the light to the maximum advantage, direct it on the subject at exactly the right angle. And with Kodak Super Sensitive Panchromatic Film in your camera you can give very short exposures, because of this super-fast film's extremely high sensitivity to artificial light.

FREE INSURANCE of YOUR "MINICAMERA"

Only at Wallace Heaton's can you get this special concession—it does not matter where your miniature camera was purchased—as long as it cost £10 or more we will insure it *free*—send for details.

COME TO OUR EXHIBITION

OF MINIATURE PICTURES WITH CONTAX & CONTAFLEX FREE—DURING OCTOBER—IN OUR NEW GALLERIES

at 127, NEW BOND STREET, LONDON, W.1

HERE ARE SOME MORE SPECIAL FACILITIES

"Leica News" free monthly to all registered Leica owners. Free Instruction Cards for Leica users. Exposure Cards free to all Miniature Camera users. Special fine-grain developing service for miniature film. Automax (Regd.) 3½×2½ enlargements from miniature negatives, 2/- dozen. Colour films for miniature cameras. All the latest books on miniature cameras in stock. State what make your camera is and we will tell you the book which gives you the best advice on its uses.

"MICROLUX" SERVICE

Our "MICROLUX" Service of developing in Paraphenylene-Diamine and other agents ensures the best results from your film; results which have so minute a grain size that they will enlarge twenty diameters or more without the grain becoming apparent, but owing to the nature of this development it is **essential** that films for "MICROLUX" development receive at least **twice the normal exposure.** Providing this extra exposure is given, negatives developed by our "MICROLUX" process possess a quality that cannot be equalled by ordinary methods. If you are interested write for fuller details.

EASY TERMS AND EXCHANGES.—Anything on nine monthly payments—our exchanges are the fairest obtainable anywhere.

OUR GUARANTEE.—Every camera (new or second-hand) costing £10 or more is fully guaranteed by us for three years.

Can you take pictures like these?

ANY SUBJECT WITH ANY APPARATUS BY ANY AMATEUR

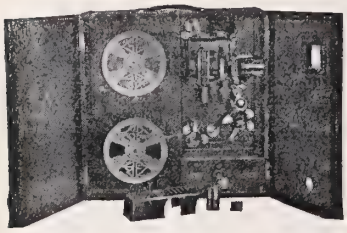
WALLACE HEATON OFFERS £25

AS FIRST PRIZE IN THIS "OPEN COMPETITION"

Here's a new competition in which the beginner stands as much chance as the experienced photographer. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement as always looking best in the eyes of the judges. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

An Exhibition of the best prints submitted will be held at the close of this competition, in our new Galleries at 127, New Bond St., W.1, prior to the return of prints to their owners.

COUPON *which must be affixed to the back of each entry.*
WALLACE HEATON LTD.
"OPEN COMPETITION"
October 21st, 1936.



21/- will be awarded for each week's best picture (in addition to the £25 first prize).

"When Bounteous AUTUMN Rears Her Head"

DRYDEN

The golden russet tints of the foliage; the mellow sunlight and the shortening days. . . . These are reasons why the alert photographer, out to catch the glory of late Autumn, loads with Ilford Special Rapid Panchromatic Plates—specially colour sensitive.

TOPICS of the Week

AGAIN the indoor "ciné" and "lantern" season is with us, and the steadily increasing number of society fixtures with lantern lectures is reflected in our page of "Week's Meetings." Home cinematography is also getting more and more popular, and each year sees a greater number of projectors as well as taking cameras available. Next week's issue of "The A.P." will be a special Ciné and Lantern Number, and in addition to many extra pages of matter devoted to these seasonable topics a very complete "Buyer's Guide" will be included, giving particulars and prices of all ciné and lantern apparatus on the market, also films and lantern plates. It is an issue that every reader should make a point of securing early and keep for reference, and societies will do well to order extra copies for their reading-rooms and files. Our readers are reminded also of the closing date of "The A.P." Lantern-Slide Competition: October 31st. The special number next week will contain some final tips for those who have not yet sent in.

Perils Aloft.

We have recently seen a number of sketches which are very popular just now in the picture postcard shops of Switzerland, illustrating the perils of "Photographie à la hauteur," or, as they are labelled in German: "Hohenphotographie." They are pictures of photographers using their cameras from perilous heights, and it is a comic expression of a very human trait among those who do photography on mountains. There is a special value in a picture, whatever its pictorial merits, which nearly cost a broken neck. Unhappily, the picture itself does not necessarily convey the fact that it was taken in circumstances of great peril. A comfortable street scene which might very well have been taken from an upper window gives no notion of the fact that actually the photographer had to get astride a girder or climb a chimney, and, on the other hand, some pictures of yawning crevasses and fearful precipices may have been taken from a vantage point as safe as one's own bed. The only recourse is for the photographer who has taken pictures in circumstances of danger to have a small inset showing himself actually making the exposure.

LONDON LANDSCAPES (No. 46).

The Green Park in October.

The Private Life of a Roll-film Spool.

The large audience which came to the last of the R.P.S. Exhibition lectures may have expected revelations, but they got only scientific ones. It is true that Dr. Harry Baines tried manfully to work up to his title, "The Private Life of a Roll-film Spool," by suggesting that the spool had a lurid and troublesome past, but really the only thing lurid about it seems to be the non-actinic light, usually red, in which the emulsification and all subsequent operations are conducted. It was, however, a very interesting description of the careful work which lies behind the little spool that is slipped so casually into place. The first stage of manufacture of photographic emulsions is the precipitation of silver bromide in gelatine, a process to be carried out under the most precise physical and chemical conditions, with concentrations, volumes and temperatures of the reacting solutions very accurately controlled. After emulsification the emulsion is insufficiently sensitive to light, and needs further treatment in order to

impart the desired photographic properties. It is maintained at a certain temperature in a thermostatically controlled water bath for a definite time—a process known as ripening—during which changes in the physical character of the silver bromide take place, whereby they increase largely in size and sensitivity, and decrease correspondingly in numbers.

Testing of Film.

Once a film is made it has to be tested. Not only is roll film subjected to a very extensive and intensive series of tests for photographic properties and mechanical defects, but every roll of backing paper, every batch of gelatine, bromide, silver nitrate—in short, every material which goes to make or comes in contact with a roll-film spool—is tested not only chemically, but for its photographic action, and not only its immediate photographic action, but, by exhaustive incubation tests, for its probable future action. Impurities may be present in such quantities as to be undetectable by chemical means and yet exert a strong photographic action. Dr. Baines, in his recent lecture to the Royal Photographic Society, pointed out that identity and reproducibility of photographic materials do not imply merely chemical identity, but physical identity of an extremely high order. The difficulties of manufacture are great, and are enhanced by the conditions of illumination—or often total darkness—under which most of the operations have to be performed. The enhanced sensitivity to light of modern roll films has introduced an undesirable sensitivity to moisture, heat, pressure, and minute traces of impurities, which has had to be overcome. And after surviving unscathed all these stringent processes and tests, the roll film is purchased by somebody who promptly exposes two views on the same portion !

Non-Stop Film.

An unusual kind of international congress has just been held in London—a congress of people from several countries to discuss oxy-acetylene welding. The session for papers and discussions which a correspondent attended was by no means crowded, but presently he discovered that there was another event in progress in a different hall of the same building, namely, the projection of film. And the output of film on this narrow subject (as it seems to the non-technical mind) was astonishing. Looking through the programme, our correspondent counted no fewer than seventy-seven separate reels of film, all dealing with welding, and, being shown, so to speak, end to end, with no diminishing of interest on the part of an eager audience. Really, if a subject like oxy-acetylene welding is film-illustrated in this thorough-going manner, what is to happen when other industrial subjects, perhaps of larger scope, more numerous variations of process, and larger application come to be adequately recorded on the film ? The dividends of our film manufacturers will, in the classic phrase, go on and on and up and up.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Fixing Prints.

Will you give me a few hints on the principles of fixing gaslight and bromide prints, so that I may be confident that the process is satisfactorily done ? *A. T. (Newcastle.)*

You are wise to be careful about the fixing of your prints, as many troubles attributed to incomplete washing are due to unsatisfactory fixing.

To begin with, it is a common mistake to suppose that the stronger the fixing bath the more quickly and thoroughly it does its work. It is possible to dissolve 10 oz. of hypo in 20 oz. of water, but such a solution would not perform its task properly at all. It would shrink the gelatine in such a way that the products that must be completely removed would be, as is were, imprisoned. A good strength is 4 oz. of hypo to the pint for a plain bath, and 5 oz. for an acid one. It may even be slightly weaker, provided it is quite fresh, and not overworked.

There is no excuse for running the risk of even approaching the exhaustion point, as the ingredients of the solution, whatever its constitution, are so cheap. Various tests for exhaustion have been suggested. One is to cut a fixed (?) print in halves, and compare the two after one has been immersed in the usual sulphide toning solution. If there is any clearly marked difference in the whites the bath is not functioning properly.

The time of immersion is important. In hot weather especially, a seriously extended time is prone to cause slight sulphurization of the image, and to render it more susceptible to the troubles that may subsequently arise from damp or from impure air.

Using plenty of active solution, gaslight prints, with their thin emulsion, require about five minutes ; chloro-bromide prints from five to ten minutes, and bromide prints from ten to fifteen minutes. Double-weight papers should have about half as long again in all cases. It is well not to let the temperature of the bath fall below 60° Fahr.

It is important that the solution should have free access to the whole surface of each print. As a print is placed in the bath it should be drawn through the solution several times, face up and face down, and left face downwards. The bottom print is always the one to be removed when sufficient time has elapsed. This brings the next print to the bottom, with its face freely exposed to the solution.

A print must never be allowed to float, even partially, above the surface, and there must be no imprisoned air between the prints.

Infra-Red Plates.

Can I treat orthochromatic or panchromatic plates so that I can get infra-red effects on them ? *M. D. (Cork.)*

You are evidently under a misapprehension. It is within the scope of some photographers to bathe a plate in a dye that will make it more sensitive to certain colours, and then to use it in an ordinary camera with or without a filter. But far more than this is necessary for infra-red work.

By various methods, plates and films can be made sensitive to infra-red rays, but no novice could produce anything as good as the materials supplied by Messrs. Ilford, Agfa, Kodak and others. Further, a proper infra-red filter must be used, and certain precautions taken with regard to apparatus.

If you wish to try this work we would strongly advise you first of all to study one of the handbooks on the subject, and so ascertain what is involved in this special branch of photography.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

USING ULTRA-RAPID PLATES *and* FILMS

This article is opportune when many photographers are using ultra-rapid plates and films for Autumn subjects. Points of importance with regard to this form of negative material are dealt with.

AT the present time of year many amateur photographers who are attempting outdoor subjects are turning their attention to ultra-rapid plates and films to compensate for the weaker light available. Many are also trying panchromatic material for the first time in view of autumn tones, and yellow lighting later in the day. For the photographer also, who will now be working indoors with artificial light, ultra-rapid plates and films, particularly the panchromatic variety, are eminently desirable.

It must not be thought, however, that these very fast plates and films are difficult to use, but there is no doubt that extra care must be exercised, particularly in dark-room manipulation, owing to their extreme sensitiveness to light.

The Camera.

When using this material it is very necessary to ensure that the camera and plate-holders are in perfect order with regard to the exclusion of light, and, in particular, that the light-traps of the slides (if plates or cut films are used) and on the camera back (if films are used) function effectively. We have recently investigated a case of fogged negatives when hypersensitive plates were used, patches of fog appearing at the margins of the negatives. No trouble had been experienced when slower plates were employed. The fault was traced to a thin place on one of the folds of the bellows.

It is a wise precaution to expose loaded plate-holders to very strong light as little as possible, and also to avoid the need for having the plate uncovered for exposure in the camera for longer than is necessary.

In the case of film cameras it is also undesirable to keep the camera fully extended and exposed to strong light while searching for subjects. Wait until the subject has been decided upon and then open, set and use the camera without delay. This, of course, applies to work in the open with very fast material at any time of year. The question of exposure is also an important one with ultra-rapid plates and films, and if colour-sensitive the calculations for filters should be ascertained accurately, as it is a fact that panchromatic material, when under-exposed, will produce negatives much harder in contrast than fast plates that are not fully colour-sensitive.

In the Dark-room.

It is very important to exercise great care in the dark-room when using these plates or films. The only safe procedure is to load slides in total darkness, for although special safelights can be used for working with this material, they are no longer safe if the plate is exposed to direct rays. Further, the visual illumination given by them is so weak that they are of very little practical service for many amateurs.

Those who have never tried to do so will be surprised to find how easy it is to load slides in the dark. Plates are generally packed in pairs, film to film, and we know that if the first plate is film side down, the next will be film side upwards. Backed plates also offer the advantage that the slightly rough surface of the backing makes it easy to tell by touch which is the film side.

When loading plate-holders in the dark the bench should be cleared of everything not wanted at the moment. The plate-holders, each with its draw-out shutter removed, and in contact with its fellow, should be placed in a pile on the right-hand side. In the centre is the box of plates. After loading, the plate-holders are put in a pile on the left.

In the case of films the camera loading can, of course, be conducted without the use of a dark-room, but here special precautions should be taken to load and unload in a shady corner, as even autumn sunlight will as readily fog a fast panchromatic film as summer sunshine, and no risks should be taken.

Speed and Latitude.

Those photographers who are not familiar with the use of the fastest plates will find that, although they are now double-coated, there is a smaller margin of latitude in exposure than is the case with those of lower speed rating. This means that more care must be exercised with regard to exposure. Over-exposure tends to produce flat negatives, with loss of tonal quality. Obviously, the best course is the careful use of a reliable exposure meter.

Development.

The use of very highly sensitive material brings problems with regard to development. Unless the plates are desensitised development by inspection is not possible. Tank development, the tank being loaded in the dark, is the best method with material of extreme speed.

If tank development is adopted, the photographer may well employ one of the fine-grain developers, if it is contemplated that the negatives will be required to furnish prints of large size. In most cases the fastest material is not of the finest grain.

If the photographer has no tank, and feels that he must watch the progress of development, the use of a desensitiser reduces the sensitiveness of the fastest plates, so that development can be carried out in a comparatively bright yellow light, but care must be taken not to expose the plates unnecessarily to the direct light.

Panchromatic or Orthochromatic ?

The photographer may be in doubt as to whether to use panchromatic or orthochromatic material at this time of year for outdoor autumn subjects. Both of these are obtainable of high speed, and to normal daylight there is little to choose between them, apart from the obvious colour-sensitiveness to the red, which is a feature of panchromatic material. If the light is yellow, the orthochromatic plate becomes a trifle faster, although not to the extent that it may be called into consideration with regard to exposure.

The pan. plate or film, through its high sensitiveness to red, is faster to artificial-light sources that possess a high red content, and is generally favoured for those subjects which are illuminated by half-watt lighting. It may also be pointed out that with the super-speed orthochromatic plate or film, fully-exposed negatives can be obtained in half-watt light with an exposure of one or two seconds with a lens aperture of f/6.3.

Variations *of the Same Subject*

A Note for the Free-Lance Photographer.

By J. C. HAYWARD.

AT some time or other every amateur photographer has felt like giving up his camera on grounds of expense—not thinking how easily money can be made with it if used in the right way.

Assuming sufficient practice has been had in the manipulation of his camera, and that the user has some idea of what is, or is not, pictorial, it only remains to choose a type of subject in which to specialise.

To have particular interest in any one subject, be it children, animals, garden or landscape, is halfway to success. For each of these branches of photography there are innumerable papers clamouring for pictures, at regular prices, but the work *must* be good, as competition is keen.

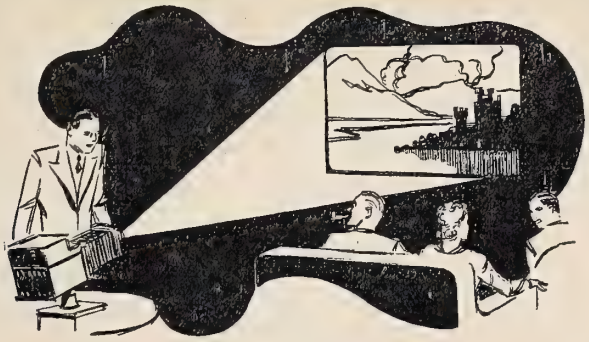
The illustrations on this page have been chosen as examples of the treatment for a simple "at home" subject, made during the past summer. The same idea can be carried out indoors by artificial light or near a large sunny window.

Tea in the Garden, No. 1.

Tea in the Garden, No. 2. Another cup for Bonzo.

Tea in the Garden, No. 3. "Who said Cake?"

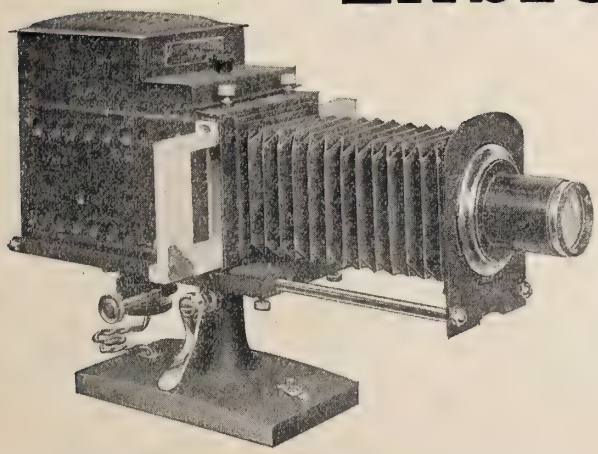
Notice that in each of the pictures the child is *doing something naturally*. Papers will not buy portraits unless they are of celebrities and topical.



When undertaking work of this character a useful rule to remember is: When you have chosen a good subject always photograph it a number of times, making half a dozen or more slightly different versions, and then, provided the negatives are technically good, you will be able to select different pictures for different papers. In the case of "Tea in the Garden" six shots were taken of this subject, each having a slightly different pose and arrangement, but each illustrating the same idea.

One, unfortunately, was a failure in the matter of pose, and one was fogged. Four successful ones are reproduced here, and it will be observed that in two cases the central portion of the picture has been enlarged, which has created a still greater difference. All four have been published, and one has secured a prize.

These examples will give an indication of what to attempt by the amateur who is aspiring to be a free-lance photographer. He should bear in mind, however, that good clean technical work is absolutely essential. The negatives must be well exposed and sharp, and the prints made on glossy paper to enable them to be easily reproduced. An attractive title or caption is generally an aid to acceptance.



Tea in the Garden, No 4. A tit-bit for Donald.

Bring out the full beauty of your pictures with Lantern Slides—Project them with an

ENSIGN OPTISCOPE

You will be surprised at the beautiful effects that are obtained by projecting your pictures with an Ensign Optiscope. Your friends will appreciate them so much more than by looking through your album. With the Ensign Lantern-slide making outfit you can make a lantern slide as easily as you can make a contact print.

ENSIGN OPTISCOPE Model 6A

Ensign Optiscope No. 6a is equally suitable for black-and-white or coloured (Dufaycolor) pictures mounted as slides. Embodies many practical features and is designed for use at home or in small halls, having a " throw " up to 30–40 feet, at which distance a brilliant 9–10 feet square picture is obtained. For home showing a smaller picture is preferable and at 15 feet it measures approximately 4–5 feet wide.

Designed to take 250 or 500 watt special projection lamp. Elevates over a wide angle and is locked in any position.

PRICES (without lamp) :

Complete outfits are contained in handsome fibre carrying-cases, and include slide carrier and all necessary leads and plugs.

No. 6A. With **ALDIS UNO** Projection Lens, 8- or 10-in. focus **£8 : 10 : 0**

With **ALDIS-BUTCHER** Projection Lens, 8-, 10- or 12-in. focus **£10 : 10 : 0**

ENSIGN LANTERN-SLIDE MAKING OUTFITS

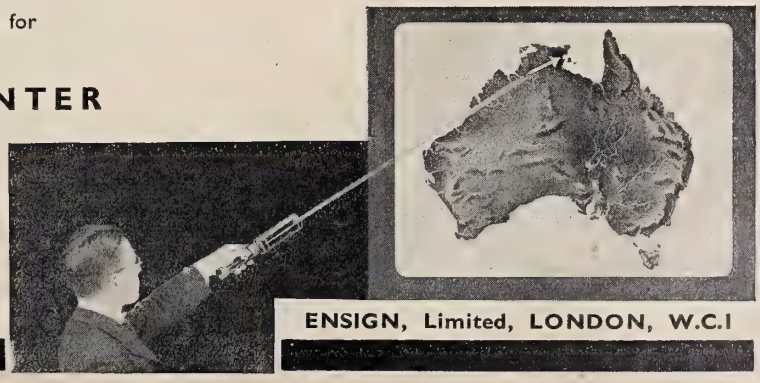
These simple outfits enable lantern slides to be produced simply and as easily as a contact print. Everything is provided in the outfit to complete the finished slide (except actual lantern plates). The outfit includes printing frame with guides for Leica or Contax Ciné negatives in strip, negative masks and glass, packet of 12 combination cover-glasses and 12 masks for either Leica—$2\frac{1}{4} \times 2\frac{1}{4}$ or $\frac{1}{2}$ "20" size. **5/6**

Masking Sets only, **2/6.**

Ask your dealer for a copy of " Optiscope Projectors for All Purposes," by Ensign.

ENSIGN JUNIOR LANTERN

A well-made lantern for junior home lectures and entertainment.



PRICE (without lamp)..... **£2 : 15 : 0**

ENSIGN ELECTRIC POINTER

This ingenious device enables a lecturer to project the image of an arrow on any desired point on his picture. He requires no stick to point with, neither need he move from his reading or lecturing position.

BATTERY model, complete with battery, **15/-**

MAINS model, with lead and plug-in transformer. For A.C. mains only, 200-250 volts, **32/6.**

ENSIGN, Limited, LONDON, W.C.1

A camera for the Serious Worker

For the serious amateur photographer who wishes to pay special attention to picture composition the Ikoflex II will make an immediate appeal.

The focussing screen of the Ikoflex, which shows the image on the same scale as it will appear in the picture, gives perfectly even and brilliant illumination over the whole of its area, due to the special construction. The Ikoflex Model II is a precision twin-lens reflex in every sense of the word, and will give every satisfaction in use.

To meet the demand that undoubtedly exists for a model giving Zeiss Ikon quality at a reasonable price we are placing upon the market Ikoflex II fitted with Zeiss Triotar f/3.5 and Compur normal shutter speeded 1 to 1/300th sec., and the cost is £15 12 6.

IKOFLEX II—

- takes 12 pictures 2¼ × 2¼ on the usual 3¼ × 2¼ roll-film spool (Zeiss Ikon film for preference).
- has a special collective lens (plano-convex) ground on the under side to form the focussing screen. This is what gives the extraordinarily brilliant image—brilliant even at the corners of the picture. Naturally, the picture seen on the screen is the right way up, and parallax has been provided for by the very simple device of masking the screen so that everything within the limits of the lens focussing must appear in the negative.
- focussing lever is of a new type and possesses a quadrant which automatically shows the aperture which must be used in order to obtain the amount of depth of focus required.
- Optical equipment, Zeiss Tessar f/3.5 or Zeiss Triotar f/3.5
- and Compur Rapid or Compur normal shutters, respectively.
- self-erecting hood is provided with a large magnifier for enlarging the image so that pictures can be focussed needle-sharp, and by one simple movement the hood can be turned into a very convenient direct-vision view-finder for use at eye-level.
- fittings are chromium-plated and the covering is also outlined in a very neat chromium-plate design, thus giving a handsome finish to an instrument fully up to the standard expected of precision cameras bearing the Zeiss Ikon trade mark.

IKOFLEX II

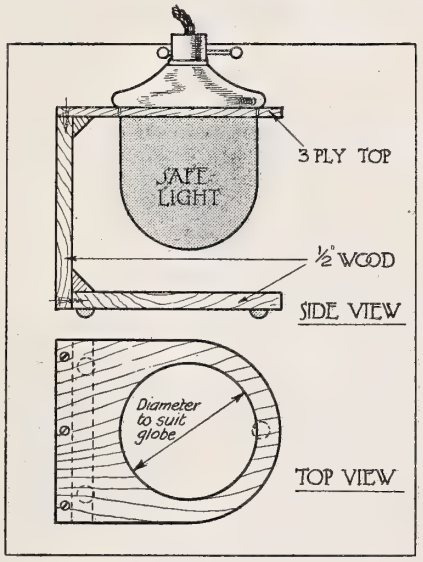
With Zeiss Tessar f/3.5, Compur Rapid shutter, carrying-strap, exposure guide engraved on hood, as above described £20 10 0

As above, but with Zeiss Triotar f/3.5 and Compur normal shutter £15 12 6

Most high-class dealers have the Ikoflex II in stock, and will be pleased to demonstrate it without any obligation. Name of your nearest stockist, together with fully illustrated prospectus, free on request.

ZEISS IKON

ZEISS IKON LTD., 11, Mortimer House, Mortimer Street, London, W.1



Readers' Hints, Tips and Gadgets

USING A SAFELIGHT GLOBE.

MANY amateurs who have not a permanent dark-room or do not possess a properly equipped safelight lamp make good use of the "safelight" globes that are obtainable from most dealers, for fitting over an ordinary electric light bulb.

I recently purchased one of these (orange for bromide work), but as I have to plug into a top light with a two-way adapter I could not use the globe as intended (suspended). I therefore made a little holder, which not only takes the globe and provides a movable safelight, but keeps it from getting knocked over or otherwise damaged. It is connected with the top-light adapter with a flex and socket plug.

The sketch will help to make the construction of this useful little dark-room accessory clear to other readers who may wish to make a similar holder. The back ($6\frac{1}{2} \times 5\frac{3}{8} \times \frac{1}{2}$ in.) and the base ($6 \times 5\frac{3}{8} \times \frac{1}{2}$ in.) are dovetailed together or screwed, according to the skill of the individual. The top is three-ply (with hole cut out with fret-saw to fit globe) and is screwed down on top of the back. The complete fitment is then glass-papered and given a coat of varnish or Chinese lacquer. Although not necessary, three caddy balls screwed into the base make ideal "feet" and prevent any rocking taking place should it be placed on an uneven surface.

Although I have only mentioned an orange lamp for bromide work, other colours for different purposes are also available. If these are required it is not necessary to make a separate stand for each one. By suitable adaptation in construction the lamp covers can be made interchangeable, and one lamp will serve for them all. Without a cover at all the lamp and stands are handy for exposing bromide or gaslight papers, or lantern slides. If the safelight covers are coated with varnish of suitable colour they should be handled carefully so that they do not get scratched or chipped.

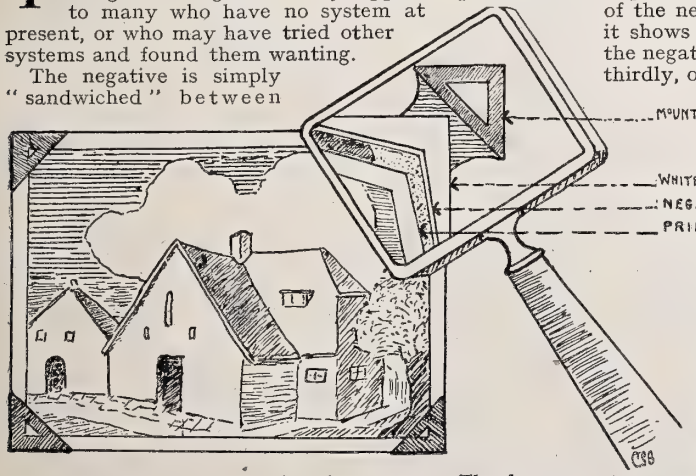
DAVID HODGHTON.

A HINT DEALING WITH DARK SLIDES.

MANUFACTURERS of plate cameras advise, in the instruction booklets that accompany their cameras, that it is bad policy to keep the "pull-out" covers in the dark slides when the camera is not in actual use. It should be obvious to every amateur that this advice is sound, but, unfortunately, very few follow it, with the result that the covers are always in the slides and frequently plates are also allowed to remain for months.

Keeping the "pull-outs" constantly in the slides causes the velvet pile which constitutes the light-trap to become flattened, and this, in turn, allows light to enter the slide each time the cover is pulled out, fogging the enclosed plates. This can be very annoying since it may happen at the least expected moment.

There is a simple remedy for this trouble, fortunately. And it takes very little time to carry out. A kettle full of water is allowed to reach the boiling-point so that the steam issues freely out through the spout. The slide, with cover removed, is held so that the steam from the spout impinges on to the velvet pile. It will be observed that the pile, instead of remaining flattened will come back to its former shape.



Should any moisture condense on any part of the slide it must be removed at once. By making use of this hint, amateurs will find it unnecessary to scrap their slides because of this fault, or to have the velvet replaced by a repairer.

D. ALDWYN JAMES.

A CONVENIENT METHOD OF STORING FILM NEGATIVES.

THIS simple and practical method of filing film negatives may appeal to many who have no system at present, or who may have tried other systems and found them wanting.

The negative is simply "sandwiched" between the print and a piece of white paper (cut a shade smaller), and the "pack" thus formed is fixed in the album by means of mounting corners.

The white paper serves a triple purpose: first, it protects the film side of the negative; secondly, it shows up the detail of the negative in good relief; thirdly, on it may be written the details of exposure and other data.

The simplest method of working is to assemble the "pack," then slip the two upper corners in place. Moisten the gummed backs and press into position in the album. The lower corners may then be affixed in the same way.

It will probably be found best to mount on one side only of the album leaf. When both sides are used there is a tendency for the mounting corners to catch against those on the next leaf.

With this system, any wanted negative is found at once by turning up the appropriate print. If the work is neatly done it is impossible to detect the presence of the negative and its protective backing. If, as frequently happens, the prints may be trimmed slightly smaller than the size of the complete negative the latter can then be placed in a thin white paper "folder" with the print on top, and the sandwich made up as before, otherwise the edges of the negative will be seen outside the borders of the print and spoil the effect.

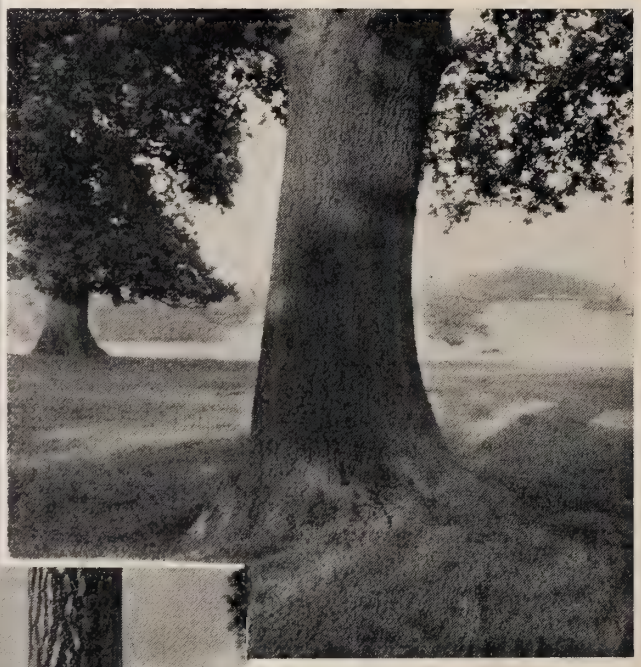
Unless it is the intention to make up an album of views for inspection by visitors this method is a good one to employ in any case in making a photographic file and print record in a convenient form, either as leaves of a book or as a file index. In the latter case numbered tabs should be added to each "sandwich" and a further index kept for reference to the whole collection.

C. STANLEY BROWN.

TREE-BOLE

By C. A. STEVENSON.

BEECH. *Evening light.* 1 *sec.*, *f*/16. *Pan. film. Green filter.*



TO portray the loveliness of trees has long been the bent of many amateur photographers, but photographic studies of tree-boles—or trunks—seem rarely to be attempted.

The chief charm of the latter work lies in the great variety of boles and their diversity of situation. Vast opportunities are open to the enterprising photographer. Yet the work is not easy. Often it is difficult to discover a sufficiently attractive bole with a suitable background. But this makes the search more intriguing and success more piquant when attained.

Tree-bole photography can be pursued at any period of the year, being quite as effective in autumn and winter as in spring and summer. It can be undertaken artistically or merely to obtain records of the different trees. In the latter case, "close-ups" of the trunks should be taken, showing, in minute detail, the characteristics of their bark. Solitary trees in valleys or on hill-sides or trees on the edges of woods and in clearings should be chosen. In these positions the lighting is usually more satisfactory and the background less confused.

Panchromatic plates and films are best for tree-bole pictures. If used with a light or medium yellow filter, this material especially excels when the trunk is photographed against a sky containing apposite clouds. A green filter, whilst likewise enhancing the beauty of cloud effects, will also give a slightly more accurate rendering of the greens in the grass and herbage surrounding the trunk. In horizontal pictures the sky is often less prominent, whilst, occasionally, it can be excluded absolutely. Films of the 'chrome type also yield excellent prints and may be used, too, with a yellow filter.

If an artistic rendering of the bole is desired, avoid photographing it at a range so short that it monopolises too much space in the picture. Never approach nearer than fifteen feet, whilst a slightly more distant viewpoint is usually advisable.

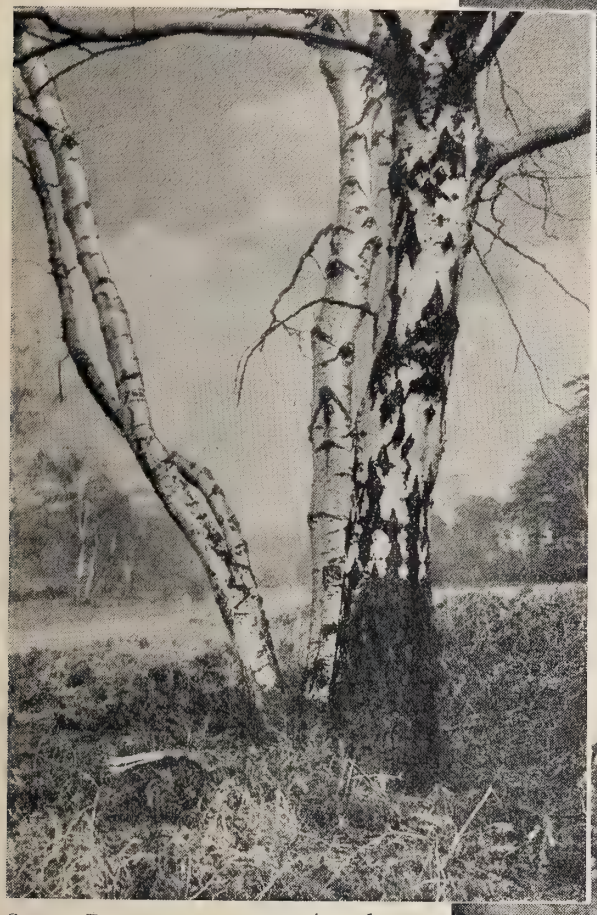
OAK. *Evening light.* 1 *sec.*, *f*/11. *Pan. film.*

BOLE OF FIR TREE. *Autumn morning.* $\frac{1}{2}$ *sec.*, *f*/16. *Selochrome.*

Morning or late afternoon when the sun is low are the most favourable times for tree-trunk photography, because the bole should be largely illuminated by sunlight. This does not necessarily mean that light and shade should be absent from these pictures. But at midday the foliage frequently prevents the sun reaching the trunk at all. A low sun, too, obviates harsh lighting and provides more effective shadows. Side-lighting is good, but *contre-jour* pictures should not be attempted. The lighting question is often far simpler when leaves are sparse or when they have fallen; for this reason autumn and winter are grand seasons for this work. Should the photographer

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Photography



AN IDEAL OUT-OF-DOORS SUBJECT FOR THE AUTUMN.

wish to impart an autumnal atmosphere to his pictures by retaining the mist in the background, he must remember not to use a filter.

A tripod must frequently be employed, especially if the lens is stopped down. Often when the sun is sufficiently low

CHESTNUT. *Evening light.* 1 *sec.*, *f*/16. *Pan. film.*

SILVER BIRCH. *Autumn morning.* ½ *sec.*, *f*/16. *Selochrome.*

to illuminate a selected bole an exposure of one or two seconds may be required at f/16. An exposure calculator or meter should always be consulted. In any case, a tripod is invariably useful, allowing a thorough scrutiny of the subject to be made on the focussing screen or through the direct finder. It is work which can be undertaken leisurely; and pains should be expended to secure the best viewpoint.

If human or animal interest is included it must be held in secondary importance by the strong placing of the tree-bole.

Apart from an exhaustive collection of prints of tree-boles being exceedingly interesting and instructive, splendid lantern slides can be made from the negatives. Whether the pictures have been artistically conceived or taken merely as records, they might form the basis of a lecture on this admirable subject. It could be treated from a variety of angles. As records depicting the peculiarities of the different trees, a series of prints might be offered to firms publishing postcards or cigarette cards.

Artistic pictures of boles may often be utilised to illustrate nature articles or books on trees. They may also be accepted readily by Christmas card or Calendar producers. Finally, tree-bole photography might be considered seriously by the expert worker seeking a new subject for his exhibition prints.

In this country the felling of the hardwood trees is proceeding so rapidly that, at some time or other, a collection of these tree-bole pictures may be highly valuable.

One other point. Scattered about the country are a few trees of special historical or personal interest. Some are notable by reason of their great age. In these cases it is the bole rather than the complete tree that gives the best idea. These come under a different category from nature studies, but are well worth adding to the collection.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A particularly attractive exhibition of photographs is now on view at the Wallace Heaton Gallery, which is a feature of the new premises of this progressive firm, at 127, New Bond Street, W.1. The pictures are all enlargements of considerable size from negatives made with the Zeiss Contax cameras, the Ikoflex, the Super Nettel and the Super Ikonta. As examples of what these miniature cameras will do in capable hands they would be hard to beat, and although in some cases the enlargements are of extreme dimensions, the absence of grain is remarkable. Our readers who visit this show, and they should certainly do so, will note several pictures by workers well known to them through our pages, such as Lancelot Vining and Harold Burdekin. Admission to the gallery is free.

A very substantial reduction in the price of "Sashalite" Photo Flashbulbs is announced by Sashalite Ltd., of 28, Victoria Street, London, S.W.1. The Baby "Sashalite" bulb, which gives sufficient light for a photograph in any room of ordinary size, and is therefore particularly suitable for the amateur photographer, now costs only 8d. The large size bulb, with a light output more than double that of the Baby, is now priced at 1s. 3d.

Messrs. Soho, Ltd., of 3, Soho Square, London, W.1, inform us that they are now sole distributors to the photographic trade of "Campro" Cameras, "Mynette" Projectors and the Peerless 916 Projector, which is made for 9.5 and also for 16 mm. films, and which will be ready for market at the end of October.

A new photographic society, to be known as the Harpenden and District Photographic and Ciné Society, has just been formed. All amateur photographers living in the district who are interested should get into touch with the Hon. Secretary, Mr. J. H. L. Adams, 12, Moreton Avenue, Harpenden.

A very successful exhibition has been held by the recently formed Windlesham Camera Club. Nearly 500 entries were sent in including 130 in the open class. This must be regarded as an excellent achievement for a club only sixteen months old. The exhibition was held at St. Anne's Hall, Bagshot, and was visited by its patron H.R.H. the Duke of Connaught, accompanied by Lady Patricia Ramsay. Great credit for the success of the show is due to the Hon. Secretary, Mr. J. C. Hayward. All workers in the district who wish to join the club should get in touch with him. His address is Hallgrove, Bagshot, Surrey.

In our recent reference to the newly-formed Poole Camera and Ciné Club, the name of the secretary to whom application for information is made should have been Mr. G. Yeatman, Browntiles, Elms Avenue, Parkstone, Dorset.

Owing to an unfortunate mistake on the advertiser's part, the Exakt Enlarger was priced at "from £8 10s." in Messrs. City Sale's advertisement in our last two issues. We are informed by Messrs. R. F. Hunter, the sole importers, that the lowest retail price is £12 15s.

A photographic society has been formed at the London School of Hygiene and Tropical Medicine (University of London). This has been brought into being by a few photographic enthusiasts on the staff who arranged—earlier in the year, a series of six lectures in the school. These proved so successful that there are now forty-four members. A full programme has been arranged for the coming winter session, and an exhibition of members' work will be held. Mr. A. T. Atkins is the Hon. Secretary, and his address is London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, London, W.C.1.

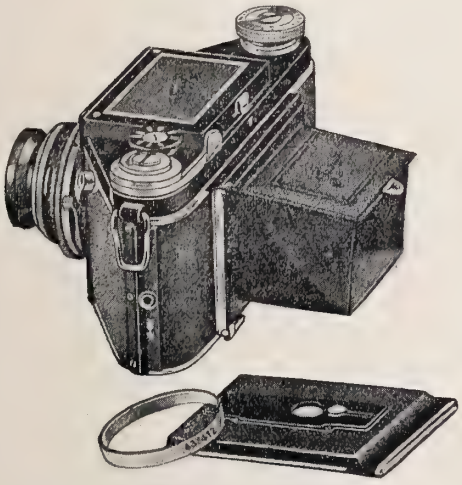
The Secretary of the Leicester and Leicestershire Photographic Society wants the exhibition secretaries of other societies to send him entry forms for their exhibitions for distribution to the members of his society. This society has a very strong exhibiting group whose acceptances totalled in the four months January to April this year, 226 prints in twenty-six salons, and in the four summer months, May to August, ninety-four prints in eight salons, a total of 320 prints in eight months. Address, Mr. Max Pethick, Staveley, 31, Clarefield Road, Leicester.

The latest winner of the Wallace Heaton Weekly Competition, full particulars of which appear regularly in our advertisement pages, was Miss I. Mercer, 11, Richborough Road, Cricklewood, N.W.2, to whom an award of 21s. has been sent.

Summer competitions were run monthly by the new Photographic Group of the Camping Club of Great Britain and Ireland. Several hundred prints were received, some of which reached a very high standard. These will be on view at club headquarters, 38, Grosvenor Gardens, S.W.1, until Thursday, October 22nd. The first Annual General Meeting of the Group will be held at club headquarters on 26th November, at 7.30 p.m. Prints to be hung for exhibition during the meeting are asked for from members. The club is running two winter photographic rambles. First on Sunday, November 1st. Meet Mr. Cohen at Epsom Downs Station, 11 a.m. Second on Sunday, December 6th. Meet Mr. Brimble at 11 a.m. at Chingford Station for ramble in Epping Forest. Particulars of lecture fixtures and all details of the club will be sent on request to the Secretary, Mr. J. Brimble, 23, Beresford Road, Chingford, E.4.

A new booklet dealing with the Welta "Weltur" Camera has just been issued by Messrs. Peeling & Van Neck, Ltd., 4/6, Holborn Circus, E.C.1. This little camera, for pictures 4.5×6 cm., has many outstanding features of interest, notably a range-finder coupled to the camera and view-finder. There are several other attractive points about this camera to which we hope to refer in a future notice. In the meantime readers should apply for the booklet, which will be sent free on application.

"THE AMATEUR PHOTOGRAPHER" DIARY, 1937



A NEW annual production from the offices of *The Amateur Photographer* has just appeared in the shape of a neat little Diary and Handbook. It is of convenient shape and size for the pocket and the contents are just what every amateur photographer wants to know presented in the most attractive form. The centre portion of the book is the Diary—one week to a page—giving ample space for engagements and notes. The end portion of it is devoted to an exposure guide—founded on the well-known and popular monthly exposure tables of "The A.P.", but presented in a compact form for ready reference and with a new and reliable grouping of the best-known plates and films on the market. Accompanying this is a series of pages for records of exposures made, with spaces for all necessary data.

The first part of the book will appeal to a great majority of readers, as it contains a very complete series of useful formulæ for photographers, including lens facts and tables, information regarding films, plates and filters, enlarging, developers—with selected formulæ, intensifiers, reducers, toning and other processes, bromoil, Carbro and lantern slides, etc., notes for the tourist and copyright information. Altogether forty pages are devoted to these matters. The little book contains 128 pages in all, and is well printed on good thin paper, leather bound, complete with pencil. The price is 1s. 6d. "The A.P." Diary for 1937 is now obtainable at all booksellers, bookstalls, and photographic dealers, or direct from the publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1, post free 1s. 7d.

WIDE APERTURES FOR THE WINTER

The wide-aperture lenses available with modern miniature cameras have quite revolutionized the scope of modern photography. Using an f/2 lens and a fast panchromatic film (such as Agfa ISS, or even F), street snapshots at night by ordinary artificial lighting are well exposed at one-tenth sec., with the camera held in the hand. In the same way, stage and cabaret shots need 1/25th—1/50th sec., while the brilliant flood-lighting employed at many boxing and wrestling rings often permits of so short an exposure as 1/100th sec.

For night photography and general winter work, several excellent cameras suggest themselves to us. There is the Contax range, where even an amazing f/1.5 lens is available ; the Leica, with its f/2 Summar or f/1.9 Hektor ; the Exakta, with the f/1.9 Primoplan ; and the very reasonably priced Dollina, fitted with an f/2 Xenon lens. We have all these precision cameras in stock. We ourselves have thoroughly tested their potentialities in the circumstances above described, and shall be delighted to place our experience at the service of customers who are considering taking up night photography. To customers living in the provinces we shall be pleased, on request, to send very complete literature on the subject. We suggest that those living in London call, where possible, for a demonstration and comparative discussion of the various models.

The illustration is one of our best sellers, the Model C Exakta. The Exakta is a true reflex taking 8 exposures on the standard V.P. film or single plates. The Exakta has the widest potentialities. It has interchangeable lenses and a number of telephotos and wide-angle lenses are available. The range of shutter speeds is from 1/1,000th sec. to 12 secs. The camera is quickly adapted for copying or for micro. work. It is provided with three slides and a focussing screen—a unique miniature camera. Prices : With f/3.5 Tessar, £26 10s. ; with f/2.8 Tessar, £30 10s. Please write for booklet.

MINIATURE ENLARGERS

As miniature specialists, we have on view at our showroom the completest selection of miniature enlargers to be seen anywhere. For Leica size negatives we recommend the Valoy, price £9 11s. 6d., or the Focomat, price £16 6s. 6d. For negatives up to 4×4 cm. we suggest the Filmarus, £9 13s. 6d., or the fully-automatic "Fam" at £14 14s. For negatives up to 6×6 cm., no better enlargers are available than the Filmarex, at £11 8s. 6d., or the bigger model of the "Fam," £18 18s. A striking innovation is represented by the Lumimax enlarger/projector, which, as its name suggests, serves the two functions. This enlarger, for 6×6 negatives, is priced, without lens, at £10 10s., or with f/4.5 lens, at £13.

PLEASE WRITE FOR DESCRIPTIVE LITERATURE OF THE VARIOUS MODELS.

The following list represents a very small selection of our guaranteed second-hand miniature cameras, all of which are subjected before resale to the most careful tests. If you are looking for a second-hand miniature camera which does not appear below, please write for our complete list—we have practically every model of miniature camera in guaranteed second-hand condition. Used miniature cameras may be purchased from us with precisely the same degree of confidence as new apparatus.

CONTAXES :

Contax Model II, f/2 Sonnar lens, ever-ready case. As new.....£39 10 0
Contax Model I, latest slow-speeds shutter, f/2.8 Tessar lens, ever-ready case. Practically as new..£19 10 0
Contax Model I, latest slow-speeds shutter, f/3.5 Tessar lens, ever-ready case. Practically as new..£17 10 0
Zeiss 13.5-cm. f/4 Sonnar Lens, for Contax. As new £15 15 0
Plate Back, for Model I Contax, £3 ; Extra Slides, 5/6 each ; Copying Arm, for use with Magniphot enlarger, £2 15 0.

LEICAS :

Leica Model IIIa, chromium, f/2 Summar lens, ever-ready case. As new.....£34 10 0
Leica Model III, chromium, f/1.9 Dallmeyer Super-Six, ever-ready case. As new.....£27 0 0
Leica Model III, chromium, f/2 Summar lens, ever-ready case. As new.....£31 10 0
Leica Model III, chromium, f/3.5 Elmar lens, ever-ready case. As new.....£24 15 0
Leica Model III, black, rigid f/2 Summar lens, ever-ready case. Practically as new.....£27 10 0
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. As new.....£23 15 0
Leica Model II, black, f/3.5 Elmar lens, ever-ready case. Excellent condition.....£18 10 0
Leica Standard Model, f/3.5 Elmar lens, ever-ready case. As new.....£11 17 6
Leitz Thambar, 9-cm. f/2.2, with special pigskin case. Cost £22 19s. As new.....£17 5 0
Leitz 9-cm. f/4 Elmar, coupled. As new.....£8 15 0
Leitz 13.5-cm. f/4.5 Elmar, coupled. Excellent condition.....£11 10 0
Leitz 13.5-cm. Hektor f/4.5, coupled. As new..£13 15 0

ROLLEIFLEXES AND ACCESSORIES :

Latest Automatic Rolleiflex, 6×6 cm., f/3.5 Tessar, Rapid Compur, ever-ready case. As new..£19 17 6
Automatic Rolleiflex, 6×6, f/3.8 Tessar, ever-ready case. Excellent condition.....£15 15 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar lens, Rapid Compur shutter, ever-ready case. As new £20 10 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar, case. Slightly earlier model.....£14 15 0
Rolleiflex Plate Adapter, 18s. 6d. ; Extra Slides, 11s. each ; Angle Mirror, in purse, 25s. ; Iris Stop, 17s. 6d. ; Stereo Attachment, 18s. 6d. ; Panorama Head, 15s. ; Focussing Screen, 11s. ; Proxars, 1 and 2, 27s. 6d. per set ; Rolleipars, 1 and 2, 15s. each ; Duto Filters, 0 and 1, 15s. 6d. each ; New Sunshade, 11s. 6d. each ; Green and Yellow Filters, new type, 11s. 6d. each, old type, 8s. 6d. each ; Ever-ready Cases for 6×6, as new £1 ; De Luxe Cases, as new, £1.

MISCELLANEOUS :

Voigtlander Super Bessa, fitted f/3.5 Helomar, and case. As new.....£12 15 0
Latest Type Super Ikonta Model II (8 or 16 on 3¼×2¼), fitted Albada finder, coupled film transport and shutter release, chromiumed metal parts, with ever-ready case. As new. Cost £28 10s.....£20 0 0
Noviflex, f/2.9 Trioplan, case. Cost £15 10s. As new £9 17 6
Makina Model II, with coupled range-finder, f/2.9 Anticomar, 3 slides, roll-film holder. Practically as new.....£25 0 0

MISCELLANEOUS—contd.

Kodak 620 Duo, f/3.5 Tessar lens, Compur shutter, case. As new.....£8 17 6
Mini-Fex, fitted latest f/3.5 Pantachar lens, Compur shutter, purse (specimen of work done shown) £5 17 6

CAMERAS TAKING 16 EXPOSURES ON 3¼×2¼ FILM :

Dolly Super Sport, for films and plates, f/2.8 Tessar, Rapid Compur, set of P.O. filters, F.P. adapter, 3 slides, focussing screen, extension tube, case. Cost £22 6s. As new.....£13 10 0
520 Zeiss Ikonta, f/4.5 Tessar, Compur. As new £7 7 6
520 Zeiss Ikonta, f/3.5 Tessar, Compur. As new £8 2 6
520 Zeiss Ikonta, f/3.5 Novar, Compur. As new £5 15 0
Kodak Nagel Duo, f/4.5 Radionar, Pronto shutter. As new.....£3 17 6
Kodak Six-20 Duo, f/3.5 Kodak lens, Compur shutter. As new.....£7 7 6
Voigtlander Virtus, f/3.5 Heliar, Compur, case. Excellent condition.....£8 0 0
Baldax, f/3.5 Trioplan, Compur, case. Excellent condition.....£5 15 0

CAMERAS TAKING 16 EXPOSURES ON V.P. SIZE FILM :

Kodak Pupille, f/3.5 Leitz Elmar lens, Compur shutter. Good condition.....£9 9 0
Nagel Pupille, f/2 Xenon lens, Compur shutter. Excellent condition.....£12 12 0
Nagel Pupille, f/3.5 Elmar lens, fitted special reflex attachment.....£12 12 0
Foth-Derby, f/2.5 lens, focal-plane shutter. Excellent condition.....£5 5 0
Piccochic, f/2.9 Trioplan, Compur shutter. Excellent condition.....£5 5 0
Voigtlander Perkeo, f/3.5 Skopar, Compur shutter. Excellent condition.....£5 15 0
Baldi, f/2.9 Trioplan, Compur Rapid. As new..£6 7 6
Baldi, f/2.9 Trioplan, Normal Compur. As new £5 15 0
Baldi, f/4.5 Vidanar lens, Vario shutter. As new £3 3 0
Baby Ikonta, f/3.5 Novar, Compur shutter. Excellent condition.....£5 15 0
Baby Ikonta, f/4.5 Novar, 3-speed shutter. Good condition.....£2 17 6
Baby Ikonta, f/6.3 Novar, 3-speed shutter. Good condition.....£2 5 0
Wirgin, f/2.9 lens, Compur. Excellent condition £4 5 0
Piccochic, f/2.9 Vidanar, Compur. Good condition £4 7 6
Piccochic, f/4.5 Vidanar, Vario shutter.....£2 7 6

MINIATURE CAMERAS WITHOUT RANGE-FINDERS FOR 35-MM. FILM :

Kodak Retina, f/3.5 Xenar lens, Normal Compur, case. As new.....£6 17 6
Kodak Retina, f/3.4 Xenar lens, Rapid Compur, case. As new.....£8 8 0
Dollina, f/2.9 Radionar, Compur. As new..£6 17 6
Wirgin, the new chromium model, Leica shape, f/2.9 Radionar, Compur. As new.....£7 7 0

MINIATURE REFLEXES :

Exakta Junior, f/4.5 Trioplan, leather case. As new £8 5 0
Exakta Model A, f/3.8 Tessar. As new.....£15 15 0
Exakta Model A (latest lever-wind model), f/1.9 Dallmeyer Super-Six, leather case. As new £20 10 0
Exakta Model C, f/3.5 Tessar, 3 slides, focussing screen, case. As new.....£21 10 0
Exakta Multispeed Model B, f/3.5 Tessar, case £18 17 6
Exakta Model B, latest lever-wind model, f/2.8 Tessar lens, case. As new.....£21 15 0

R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

THREE THINGS THAT MATTER

Service, Stocks, Facilities—you will find them all in abounding measure, at the "Four Westminsters." An expert specialist staff whose knowledge and advice are readily at the disposal of Photographic and Motion Picture Amateurs at all times. Extensive and infinitely varied stocks (always Earliest with the Latest); Second-hand Bargains that speak eloquently for themselves. EXCHANGE and OUT-OF-INCOME arrangements that prompt the advice from all who have experience—"Go to the Westminster; you cannot do better."

NEW MAGAZINE CINE-KODAK

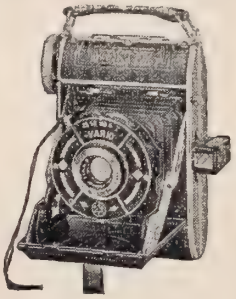
Remarkable Production!

Charger loaded in 50-ft. 16-mm. film in 3 seconds. Film instantly interchangeable, e.g., Kodacolor to black-and-white, and vice versa, without any loss of footage. F/1.9 Kodak anastigmat, option of four telephotos 2 to 6 in., universal finder. Ask for full description, or call and see. Complete in leather case.

£40:0:0

Nine monthly payments of £3 4.

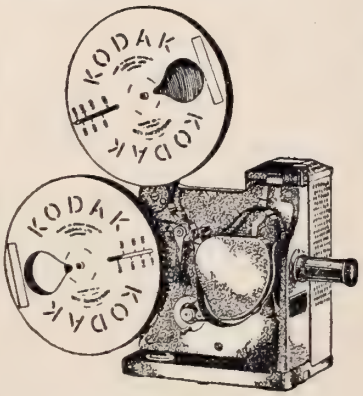
F/2.9 Lens "WESTEX" Miniature



Superb Pictures in Dull Light

The "Westex" is the lowest-priced high-precision miniature, with the famous f/2.9 Radionar lens, of world-wide reputation. It focusses to 3 ft., and will give critically sharp pictures on winter days with cloudy skies; and the shutter is the well-known Prontor II, giving 1 to 1/175th sec., T. and B. Camera takes 16 pictures 3 × 4 cm. on standard V.P. spool, and is fitted with high-class optical direct-vision finder. Easy to manipulate, and most handy to carry. **£5:12:6**

Nine monthly payments of 13/2.



Also with Vidanar anastigmat f/4.5 and Vario shutter, 1/25th, 1/50th, 1/100th sec. **£3:12:6**

Nine monthly payments of 8/7.

THE

KODASCOPE MODEL "D"

Gives a brilliant, steady picture, 40 × 30 in. at 14 ft. Takes 400 ft. of 16-mm. film, amply sufficient for fifteen minutes' continuous running. "Stills" at will, and rapid rewind. Smooth-running motor drive, just plug-in to house supply. 300-watt lamp, fan-cooled lamphouse. With supplementary resistance, splicing and oiling outfits..... **£25:0:0**

Nine monthly payments of 58/4.

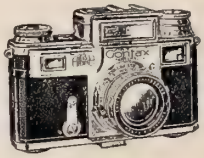
KEYSTONE 750-watt 16-mm. Projector

Greatest Value Ever!

2-in. large-aperture projection lens, motor drive, forward and reverse, Clarostat control, special still device, 750-watt lamp, super optical system for added brilliance, fan-cooled lamphouse. New improved double-claw action, screw tilting, geared rewind, simple threading. Complete with resistance, splicer and carrying-case at phenomenally low price of

£36:10:0

Nine monthly payments of 85/1.



(Other models, 200 watts and up, from £12 12 0.)

ZEISS IKON CONTAX III

With Built-in Electric Exposure Meter

Also exclusive Zeiss Ikon coupled wedge-type distance meter, combined with view-finder. Metal focal-plane self-capping shutter gives speeds ½ to 1/1,250th sec., speeds easily adjusted and visible, with delayed-action movement. Bright parts in chromium.

F 3.5 Tessar..... **£53:0:0**

Nine monthly payments of 123 8.

F/2 Sonnar..... **£63:0:0**

Nine monthly payments of 147/-.

F/1.5 Sonnar **£78:5:0**

Nine monthly payments of 182/7.

ENSIGN Magnaprint

Midget size. F/6.3 Ensar enlarging lens, specially designed condenser for enlargements up to 15 × 12 in., chart giving various sizes. Takes Leica, Contax and all miniature negatives, also half-V.P. and others. Complete with electric fitting, less lamp. Also special model for Standard Leica lenses.

Either model

£4:15:0

Nine monthly payments of 11/1.

Automatic Focussing Model, with f/4.5 Dallmeyer lens

£8:10:0

Nine monthly payments of 19/10.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

BINDING "The Amateur Photographer"

By STANLEY PULSFORD.

THERE must be many readers of "The A.P." who cannot afford, or do not care to go to, the expense of having each volume bound, and yet wish to keep back numbers for reference.

A pile of back numbers becomes bulky, and may also be very untidy if referred to often. The following method of binding, if somewhat unorthodox, will be found to answer well and to have the advantage that any matter—such as advertisement pages—which may not be required can be discarded.

Take a complete volume of "The A.P." and remove the wire binders that hold the leaves together. Discard the covers and the first double leaves containing advertisements. With a sharp knife slit down the centre fold of the leaves and remove the advertisements at the end and any others there may be in the middle.

Place the remaining pages, in their correct order, on a flat level surface and arrange them as neatly as possible. The edges will not coincide exactly, and in a professional job, of course, the edges are trimmed up by a guillotine. With care, however, a reasonably good arrangement can be made.

Take two pieces of wood about $\frac{3}{8}$ in. or $\frac{1}{2}$ in. in thickness and 15 or 16 in. in length. The width is not important, and may be anything from about two inches upwards. If the wood is not as wide as the paper an elastic band should be stretched round the front edges of the paper to keep the pages from flapping about.

The volume is clipped between these two pieces of wood so that the back edge projects about a quarter of an inch beyond the edges of the wood. A cramp secures the centre, and two long wood screws secure the ends (though cramps may be used here also if available).

A volume of "The A.P." held between pieces of wood with the back edges exposed for applying the backing paper.

Cut a strip of paper lengthwise, two and a quarter inches wide, from one of the discarded covers and place it aside.

Squeeze some "Seccotine" on the back edges of the volume, spreading it evenly with a wad of paper. A fair amount should be put on, but not too much. It is important that the adhesive should reach the back edge of every leaf in the book. To assure this, wipe the "Seccotine" from side to side as well as lengthwise. The surface will not, of course, be smooth, and care should be taken to see that no places are left dry owing to the roughness of the surface. A pointed match-stick will serve to introduce the "Seccotine" to awkward places.

Take the strip of paper previously cut and laid aside, run a thick streak of the adhesive down its centre and stick it on the back of the volume so that it overlaps evenly on each side. Press this well down on the binding and run the fingers along it to make it adhere firmly to the back.

Now leave to dry (all night for preference).

The covers can be made from sheets of cardboard. This need not necessarily be new, parts of old boxes or packing will serve, as the bare boards will not show in the finished job. Two sheets of a suitable size, slightly larger than the paper, are placed side by side, the thickness of the bound volume apart. A strip of fabric or thick brown paper is stuck on to form the back of the book and join the two covers together.

To fit the book into the covers take two of the discarded "A.P." covers and cut the back cover off one and the front cover off the other, with the exception of a strip one and one-eighth inches wide which is to be stuck on the back of the bound volume, thus providing it with two flaps which are used to secure it to the covers.

The book is placed in position in the cardboard covers and the outside of "The A.P." covers stuck with "Seccotine" to the inside of the cardboard.

This completes the binding, but the covers may now be themselves covered in brown paper in the way in which new books are usually covered for protection, and the backs labelled with the title and dates.

A few volumes of *The Amateur Photographer* thus bound and stored on a shelf will make what is practically a complete guide to photography, containing a wealth of formulæ, facts and information, always conveniently to hand.

If it is desired to keep the coloured covers of "The A.P.", as many of them contain attractive pictures, these can also be included in the volume, either as a complete set at the end of each book, or left in their regular positions at the beginning of each number. Alternative make-ups of the volume will also suggest themselves to the reader who may wish to keep the reading matter entirely separate from the art pages, which may be bound separately.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

THE OPTOCHROM TANK.

SIR,—On three or four occasions I have found that the film would not wind into the tank, and so long as I do not try to force the issue and thereby crack or unduly bend the film, I find that if I take the film out of the tank altogether (in darkness, of course) and reverse it, I usually succeed in getting it properly wound off. It is necessary to transfer the film, with paper, on to a spare spool and to loosen the end which is always stuck on to the paper. Not only does it make no difference in the tank, but the whole film, right to the end, is pulled into the developer.—Yours, etc., T. S. DUFFILL.

SIR,—My method of "separating" the paper from the film is to cut the paper close up to the slot with a pair of scissors. If the blades of the scissors are inserted in the aperture at the bottom, it is possible to get a clean cut through the paper, *right up against the slot.* The funnel is then turned to the left, and back again, three or four times. I have never experienced any difficulty in getting the whole of the film inside by this method. I hope that this tip will solve Mr. P. G. Woodland's difficulty.—Yours, etc., ERIC GREENLAND.

SIR,—In your issue dated September 9th—the latest to hand—there is a letter from Mr. J. C. Jenkin on the "Optochrom" daylight developing tank.

I also have used one of these tanks for the last eighteen months, but with rather indifferent success; perhaps Mr. Jenkin would—if he should notice this letter—be good enough to reply to the following questions. (I always use Agfa films.)

(1) Can he extract all the backing paper from the tank, if so, how? If I try to do this the film itself is pulled back out of the scroll round the knife towards the outlet slit, due to the tenacious way the film is held to the backing paper. To overcome this when the film is completely wound into the scroll, I tear the backing paper off at the slit, this of course, leaves a good deal still wound on the spool in the tank, resulting in the tropical hardener becoming a deeper red each time it is used.

(2) I have had to give up using the tank as a daylight one as I cannot get even development. To quote from Mr. Jenkin's letter, "The main point I find for successful operation is to keep the developer agitated. . . ." Agreed, but how? The tank cannot be turned upside down or shaken about, as the developer spills. Again, if the filling funnel of the tank is moved up and down the fanlike support for the scroll causes a pumping action, which only agitates the developer in the vicinity of the top and bottom of the film; this causes increased contrast by over-development, showing in the form of mountains along the edges of the film and having their peaks towards the centre.

Many and various are the experiments that I have tried, and a few films spoilt in an endeavour to overcome this trouble. I now use the tank in the dark-room without the lid on, and completely remove the film from the developer once every two minutes. Though this is perfectly satisfactory it defeats the object of the tank.—Yours, etc., A. R. C. MATTINGLEY.

(Egypt.)

NUMBERING FILMS.

SIR,—After reading W. R. B.'s letter on "Numbering Films" I set to work to find a method of getting 16 exposures on a $2\frac{1}{4} \times 3\frac{1}{4}$ film without extra numbering. In about five minutes I found this solution.

On most $2\frac{1}{4} \times 3\frac{1}{4}$ films there are two sets of numbering: at the top and bottom—both for eight exposures. The lower, however, is slightly behind the upper. It happens that the first lower warning dot before each number is almost exactly mid-way between the two upper numbers above it. This fact is used in this method of "economy."

After the mask has been fitted, the film is threaded, exposed and removed from the camera just as if there were no mask in at all. On the film are alternately areas of exposed and unexposed emulsion. The half-exposed film is now unwound and the paper tab stuck down as for tank development and then rethreaded as before.

The film is now carefully wound on until "8" appears in the window and then turned carefully until the fourth of the dots is in the middle of the window; the film is now ready for taking, an unexposed piece of film opposite the opening in the mask. The "8" comes before the dots instead of after them because the film is in backwards. After the exposure the film is wound on till the fourth dot after "7," and so on until the fourth dot after "1," when sixteen exposures will have been made.

Hoping that this hint may be of interest and use to some of the many readers of "The A.P."—Yours, etc.,

WM. A. ROSS-SMITH.

A MINIATURE CAMERA DANGER.

SIR.—Judging from his letter on "A Miniature Camera Danger," in a recent issue of *The Amateur Photographer*, C. H. W. K. seems to be under the impression that the shorter the focal length the nearer the viewpoint to adequately fill the picture space.

This, of course, is wrong; the real criterion being angle of view.

When using a 2-in. lens on a Leica film, one stands the same distance from the subject as when using a $5\frac{1}{2}$-in. lens on a quarter-plate.

Another point is that the size of the view-finder is not necessarily large in a large camera and small in a small one.

My experience is that people are afraid to work proportionately as near the edge in a small view-finder as, say, they would with the full-size finder of a reflex camera.

This means, generally, that they stand farther from the subject when using a small finder.—Yours, etc.,

PERCY B. ASHWORTH.

FAIR PLAY FOR THE VERTICAL LINES.

SIR,—Your contributor Herbert Mills, in his article "Fair Play for the Vertical Lines," has put forward a very ingenious explanation which only serves to increase the muddle in which this phenomenon is shrouded.

Let us consider a section of street only 20 yards long (the length equivalent to the height of a fairly high house). If Mr. Mills will bring his eyes to within three feet of the ground the convergence shown by the kerbs of this section will be marked, but if, now, he raises his eyes to 50 feet above the centre of the street, the convergence of those 20 yards will be negligible, but nevertheless present, as he can verify by looking beyond his 20-yard limit towards the horizon.

Transferring this argument to the vertical plane he will see that I have agreed with him that a medium-sized building seen from a reasonable distance appears to have parallel verticals, but I don't think he will deny that a New York skyscraper seen from the street below has converging verticals.

But seen from a distance I agree that it appears to have parallel verticals, even as a section of street 100 yards long seen from an aeroplane vertically above it would appear to have parallel horizontals.

The question is therefore seen to be basically a function of the ratio of the length of the object viewed compared to the distance from which it is viewed, and the position of the eyes in the head is of doubtful and academic value as an argument.—Yours etc., G. B. STANFORD.

CAN THE MINIATURE CAMERA LIE?

SIR,—In reply to Mr. Johnston's uncomplimentary remarks about a certain picture of mine, I would like to ask him if he was a disappointed competitor? It sounds like a case of "sour grapes" to me.

Furthermore, his remarks are not very flattering to the judges in the competition in which the picture was awarded first prize. I am prepared to place Mr. Marcus Adams' opinion before that of Mr. Johnston. Perhaps this super portraitist has so many negatives capable of winning cheques for £100 that such a trifling award would accompany the negative to the waste box—also *tout de suite.*—Yours, etc.,

H. D. H. VALLIS.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLVI.

Mr. L. A. B. EDENBOROUGH

From information communicated to our Special Representative.

"MY wish to make pictures by using a camera is, I think, due to the fact that certain moods of nature, or certain objects, natural or artificial, because of their arrangement and lighting, excite so pleasurably that I feel compelled to try and pass on the same pleasure to others. When nature under certain conditions, or objects lit and arranged in a certain way, fail to give this feeling of exhilaration (for pictures should gladden), then, for me, there is no picture. My interest may be aroused, but that is not enough.

NEWARK ABBEY, PYRFORD. *L. A. B. Edenborough.*

"It so happens, probably owing to early environment, that I receive a keener thrill from effects of light and shade, and certain moods of nature, than I do from arrangements and effects to be got indoors; for me, the sun, rather than the lamp. Thus I am chiefly interested in landscape. The kind of country I prefer is open, with roads running hedgeless to a low horizon. I find it difficult in localities richer in incident to prevent interest in the picture-content from dominating the effect.

"The difficulty I find with landscape, or any other outdoor work, is that the various factors for a successful result—viewpoint, time, lighting—so rarely coincide. In some measure to overcome this I recommend that an accessible locality (which well may be within the daily round), be thoroughly known in respect of the most promising viewpoints, and the time and weather conditions noted that appear most suitable for their use. Thus one of the factors becomes fixed as it were.

"I was brought up on a half-plate stand camera, and would still use it but for the cost of material. I carry now a ¼-plate folding pocket camera with normal lens and 'Distar.' My colour filters are ×1½, ×1½ and ×3. I have an extinction type meter, whose findings I temper with my own judgment, for I like negatives very fully exposed.

"Plates are desensitised, and developed by inspection to a degree suitable for condenser enlarging. I use Amidol for plates and paper, liking the very transparent image it gives. I prefer to be able to use a medium contrast bromide paper. Granville Gulliman's I find excellent. If I want a brown I use sulphide toning *before* and after bleaching, finishing with a tartaric acid bath in case of stain. The methods of control I use are: local reduction of negatives (friction), shading and diffusion during exposure of paper, local reduction of print (ferricyanide).

"I do not use 'oil reinforcement,' as I have a feeling that the image forming the picture should be homogeneous; but I do not carry this objection so far as to exclude 'dope.'

"I am particular about such things as temperature, safelight, dust, etc.; in fact about anything that can adversely affect the quality of the final print.

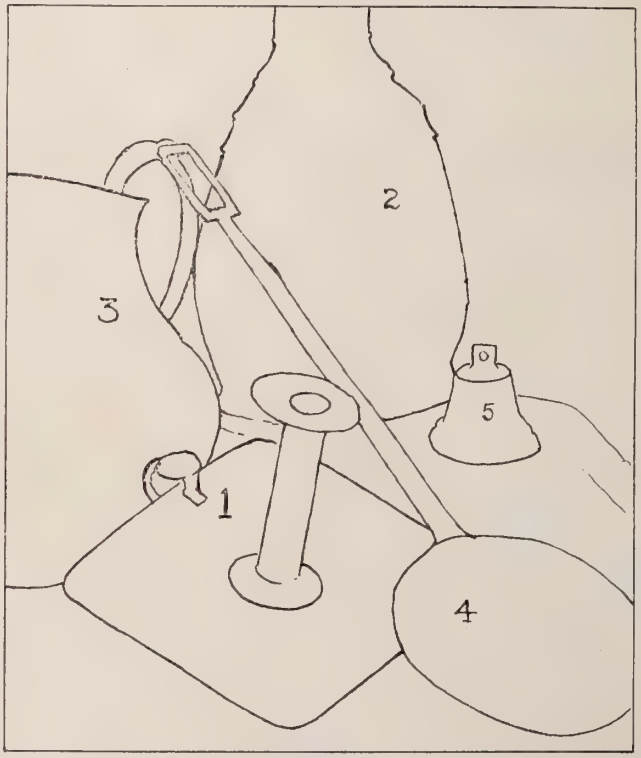
"Finally, if you already feel attracted to the picture-making side of photography, which, after all, one must remember is only one branch of our hobby, don't be discouraged if at first your efforts fail to find response in those who judge, and make certain that failure is not through faulty technique. The best way to learn that and all things relevant to the hobby in any of its branches is naturally through association with minds of like interests. Therefore, if possible, join a society, but in any case do not deliberately handicap yourself by neglecting the regular reading of this paper, which I certainly have enjoyed and benefited by since the days before it combined with 'Focus' and 'Photography'."

(A further example of Mr. Edenborough's work is reproduced on one of the centre Art pages.)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"OLD BRASS," *by James C. Gilchrist.*



AN interesting point that arises in connection with this picture is its suggestion of spontaneity. This is a feeling which seldom occurs in work of the still-life class, and it seems to have its origin in the ordered disorder in which the material is arranged. It seems to convey the impression that the subject was not deliberately placed in position or built up into a preconceived composition, but that the disposition of the various objects happened by chance; that the possibilities of the subject were seen and appreciated; and that, upon the inspiration of the moment, it was taken there and then.

If this were actually the case, a measure of congratulation is deserved for the seizing of the opportunity, but if not, and the subject has been consciously constructed, an equal degree of praise is due on account of the foresight that has enabled the impression to be suggested. It is something of a novelty, and the picture gains in attractiveness because of its inclusion. The unusual nature of the material itself, again, tends to heighten the feeling, and the impression of originality and freshness of outlook is pronounced.

It may have been with the idea of stressing this impression that the subject matter was so severely trimmed, or, on the other hand, the restriction may have been imposed by possible intrusions of an undesirable character.

In the first case, it is difficult to believe that any real advantage has resulted from the closeness of the trim, and, failing a very definite reason, it is far more likely that the composition would appear more finished and complete if none of the subject elements were truncated, but included in their entirety with an adequate proportion of setting. In the second event, it can only be suggested that it would have been wiser to have arranged for the removal of the intrusions before the exposure was made.

Apart from this rather serious drawback, the composition happens to fall together very well. The candlestick (1), as the nearest complete element, assumes priority and forms the centre of interest. It has strength of position, too, its most prominent light falling on or near one of the points formed by intersections of divisions of thirds, vertically and horizontally, and the light itself, as the largest mass of brilliant tone, has an innate power of attraction. The portion of the lamp (2) lends it support by force of opposition, but its introduction involves a question of balance.

Two elements on the same diagonal might possibly balance one another, provided they were of unequal pull and not equidistant from each corner, but where they are on the same straight line, the one almost directly behind the other, and the diagonal connection does not exist, something in the nature of a horizontal balance must be provided. This is afforded by the jug (3) on the left, and the ladle (4) and bell (5) jointly on the right. With (3) where it is, a single object, not so big as the ladle, would be sufficient to complete the scheme, assuming it were placed between (4) and (5), but with (4) so low in the picture space the introduction of (5) becomes a necessity, because, in effect, the pull of the two lies, as far as (3) is concerned, in a direction passing midway between them. It is the direction of the pull that provides the balance, and, with the horizontal connection thereby suggested, the up and down direction of (1) and (2) is adequately countered.

In these respects the arrangement seems exceedingly well contrived, and, indeed, is very successful. It is a pity about the trim, for the sense of restriction *is* a defect in an otherwise pleasing design, but, from the technical aspect, the work achieves a very high standard. Naturally, a true conception of its quality could only be gathered from the original, but the reproduction does give an admirable impression of the way the tone values have been recorded, even the most subtle of gradations being faithfully shown.

This, of course, is expected in a class of work, such as this, where both subject and lighting are under full control and the conditions are such as to enable the questions of exposure and time of development to be determined, almost immediately, by trial and error. Any deficiency in either respect can be adjusted at once and there is little excuse for any defect unless it be lack of sufficient technical experience.

But there are few classes of work which offer equal opportunities for its acquirement. Still life can be essayed under daylight or artificial lighting with equal prospect of success. It is, therefore, a branch of work that is pre-eminently suitable for the winter months when conditions outdoors are not inviting, while the knowledge so gained will be found invaluable when spring and summer come again and the open air is calling. "MENTOR."

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IN dealing with a subject of the nature of No. 1 of the prints reproduced on the opposite page—"The Bridesmaid," by C. C. John—so many things tend to defeat the aim of the photographer to produce a decent piece of work that it is surprising when any result worthy of the name is turned out.

Preparation and Production.

He is usually called upon, on the spur of the moment, to lead the girl up the garden path and "snap" (!) her at once. A masterpiece is expected, naturally, for the subject is usually charming, and her attractions are enhanced by the freshness and daintiness of the dress appropriate for the occasion.

There is no time whatever for previous preparation; it is rare indeed that a suitable background can be found, nor is it likely that the time required to improvise one could be allowed; the lighting has to depend upon chance; and spectators and would-be helpers get in the way and are nothing but a nuisance. Conditions are such that it is a wonder if none of the many manipulations is overlooked, yet, when the print is produced, it is unmercifully criticised if, for any reason, it is thought to fall short of anything else that has been done upon the same or a similar occasion, notwithstanding the fact that the other example may be a professional effort and have years of experience—to say nothing of the resources of a well-equipped studio—behind it.

Nevertheless, the average amateur effort does, as a rule, beat the professional in one respect. He gets, as has been done in this instance, a more spontaneous and therefore more natural representation of his sitter, while the expression, also, is generally more pleasing.

Subject and Setting.

The background, in this case, is probably as good as could be found at short notice. At least, it is subdued in tone, and, except for the blossoms on the right, does not show any violent contrast of tone to detract from the attention that should be devoted to the figure. The flowers in question, however, are not very assertive and do not make a great deal of difference. They do not force themselves upon the attention in the way that foliage often does, and the figure, being in a much lighter tone, tells quite effectively against the darker setting.

The window just above the head is a bit of an oversight which a little dodging about could have avoided, but, taking it all round, the print is good for what it is, and shows the model to advantage.

It does, at any rate, compare favourably with No. 6, "Jane," by Allen Temple, where quite a well-posed figure is shown against a setting that is about as badly chosen as it could be. It is spotty and unrestful, and, at a little distance, it is difficult to distinguish between figure and background.

Lighting and Arrangement.

There may be occasions—where a sitter is scarcely favoured by nature—when a certain amount of camouflage may not be unkind, and a setting such as this might be only merciful, but here there is obviously no need for any such treatment, and a quieter setting and one that would be inclined to reveal the subject more fully is definitely needed.

A background lower and more even in tone is indicated. The probability is that the direction of the lighting is at fault, and, if the line of sight were altered so that the face of the sitter was fully illumined and the setting was in shadow, much of the disability of the present rendering would be avoided. But whether such an adjustment is possible or not could only be determined on the spot. Portraiture in a woodland setting is a tricky thing at best; but, if it must be done, a well-lit space for the figure should first be found and then circled until a background in shadow comes into view.

The chances are that a method such as this would avoid the incorporation of so uncompromising a setting. It would also have been found of service in a case like No. 4, "Resting," by J. W. Clements, which, if not so assertive, does show a defective choice of background and one in which one of the figures is disfigured by the apparent springing of a tree from its head. It is always unwise to show the features against a similar depth of tone behind, particularly when, as here, a more upright position on the part of the models would have brought them against a darker portion.

Contrasting Elements.

Features and setting should, as a rule, be regarded as contrasting elements. If the face is light in tone, the setting should be darker, and if the face is in dark tones, the background should be the lighter.

The contrast, of course, should not be carried to excess, but No. 2, "Vera," by A. S. Bellinger, gives an idea of what is desirable if the lighter corners—which form a serious drawback—are disregarded. The features, in this instance, are badly defined, the cause, apparently, being incorrect focussing. A similar defect occurs, again, in No. 8, "Winifred," by S. A. Brown, although, perhaps, it is not quite so marked. The background, however, is devoid of tone and scarcely serves its function.

On the other hand, the opposite extreme is shown in No. 3, "Look!" by H. P. Coltee, and the setting offers too great a contrast with the figure. Not only is the figure too light, but the setting is too dark, and neither shows the gradations it should.

Direction and Proximity.

The prime cause, in all probability, is that the source of light is too near the figure, consequently it is overlit in comparison with the setting. It also seems too directly frontal, and moving it to a greater distance and more to one side would offer an improved rendering.

With the present negative, however, it might be found advisable to substitute a softer grade of printing paper for that now employed. It would, at all events, reduce the contrast appreciably, and enable the lights to be more fully printed without overprinting the darks. A similar tendency is evident, again, in No. 5, "Studying Song," by H. P. Willis, and similar treatment is indicated. A greater viewing distance would also have been beneficial, for it would have enabled the truncation of the head to be avoided. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

REMOVING UNWANTED DETAILS.

IN referring to a print some time ago I casually mentioned that I had removed an obtrusive and unwanted figure, and if I am to expect any more peace the only way is to say how this sort of thing can be done. But the beginner must understand clearly that there are limits to what he can fairly expect to do in this direction at first. The expert can do wonders, but his ability is the result of long practice.

It may be assumed that the beginner will have a negative not much smaller than 3¼ × 2¼ in., that he will work on a matt print about half-plate as a minimum, and that the object to be removed shall come against a rather varied background. If he tries to remove a telegraph pole standing out against a sky, and works on a miniature negative and a glossy print, he cannot say that it was I who encouraged him to try it.

Many years ago I was photographing at Dunstable Priory church with my old friend H. W. Bennett, who was using a 12 × 10 camera and included in his subjects the fine Norman doorway seen in the illustrations. At that time someone had enriched the Norman mouldings of the arch by putting in the middle a large and ugly gas lamp. Bennett could not stand this, and when he exhibited his print the lamp had vanished, and the mouldings were restored.

To do this he adopted the usual method of the period. With retouching medium and pencil he worked on the lamp, bringing the clearer parts such as the iron framework into tone with the stonework. Then he made a 12 × 10 positive, and in a similar way toned down the light parts, such as the glass, and further modified the stonework. Finally, he made a 12 × 10 contact negative, retouched this and produced a carbon print which hardly needed retouching at all.

Fig. 2.

Fig. 1.

When I revisited Dunstable recently the lamp had gone, but close to the door stood a large dark notice-board, and a black perambulator with chromium handles. I thought I would try to eliminate both, as Bennett had done with the lamp, but not in the same way. I did not take the subject with a 12 × 10 camera on a stand, but on a 3¼ × 2¼ film with the camera held in the hand.

Fig. 1 is on contrasty paper to show the offending objects quite plainly, and I will describe the steps I took to remove them, so that in the complete print, from which Fig. 3 is reproduced, no one who has seen it has had the slightest suspicion that any faking has been done. About all the means I used I have given information in previous articles.

The negative having been dried (so that I could print Fig. 1) I soaked it in clean water for an hour, laid it face down on a half-plate glass, wiped the back with moist chamois leather, turned it over and wiped the film side. The glass was then put in a retouching desk with the negative clinging to it, the film being still water-logged but free from surface moisture.

I then set to work with Johnson's retouching dye, which I described some weeks back. It is a concentrated

liquid of the colour of Payne's grey. I diluted a spot or two to a light grey, and with a small brush carried a wash of it over the door on the left (Fig. 3) and the closed half of the door on the right. They would then print rather lighter, and with better detail.

Work was then done on the clear film which marked the board and the pram. The exact outlines were not followed, and the dye was put on irregularly in touches of various depths, even the neat dye being used here and there. The main idea is to leave no part so transparent that it will print darker than the tone finally required, as it is easier and better to darken tones on the print than to lighten them. When sufficient dye has been applied it is well to leave the negative lying flat on the glass for a time before pinning it up to dry.

Fig. 2 is from the negative so treated. It will be seen that I have left the front part of the pram rather too dark, and the back half untouched. This was to show that parts too dark on the print can be lightened with a retouching knife.

My favourite kind is a lancet like a letter V with slightly curved sides. It must be razor-sharp. If it is held nearly at right-angles to the print, and drawn very lightly over a dark patch it scrapes off some of the silver.

Fig. 3.

But it is better to work on the negative first than to rely too much on the scraper.

Having appropriately scraped both parts of the pram, I proceeded to touch out the handles, and even up other parts with a No. 1 sable and lamp-black water-colour. When this was dry the print might have been steamed, but, as usual, I prefer to apply the familiar "dope."

All the work done was comparatively easy, and took a surprisingly short time. Certainly it was a simple case, but much more elaborate ones could be done efficiently with a little thought and patience.

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

Twenty-ninth Scottish National Salon.—Open, February 20–March 13; entries, January 23. (J. J. Robertson, Hon. Salon Secretary, Art Gallery and Museum, Perth.)

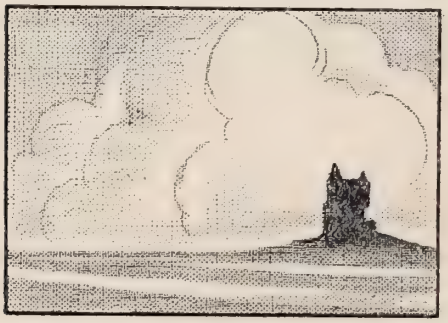
Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

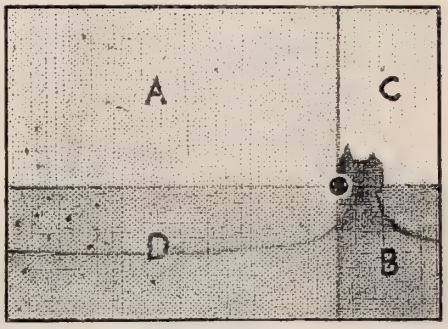
L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

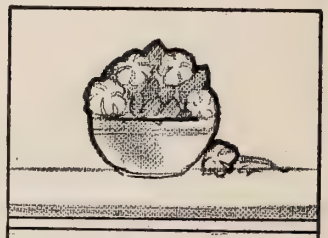


Picture Points

No. 22 (New Series) *by RICARDO*

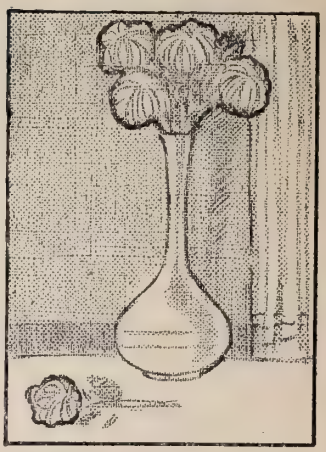


A Point on Balance.



THIS is a subject which seems to possess many difficulties for the beginner, because no rule can be laid down for assuring a perfect balance of all the various items in different pictures.

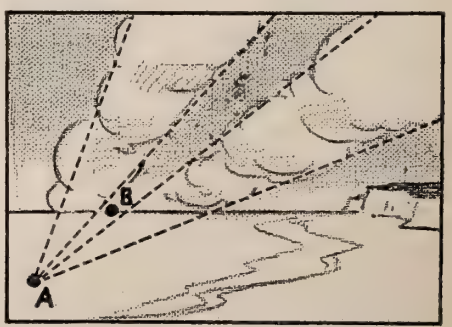
In assessing the balance of a picture one has to "weigh up," mentally, the relation between each mass of light and shade within the four edges, and it is only with constant practice can one decide with any certainty whether good balance is present or not. There are various methods which one can apply to a print for this purpose and one of these is illustrated here. The main point of interest is obviously the castle, and this should be the balancing point for the whole picture with the various masses of light and shade balancing horizontally as well as vertically.



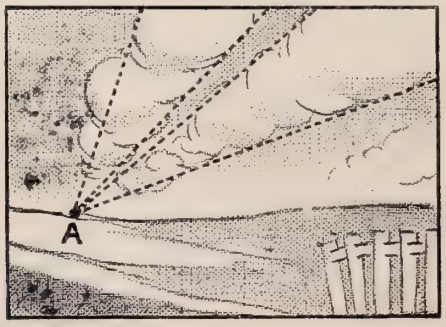
If we analyse this arrangement in the form as shown in the lower sketch, it will simplify matters considerably. For horizontal balance the two larger masses "A" and "D" seem to balance "C" and "B," while the vertical balance is again shown by comparing "A" and "C" against "D" and "B," remembering that a larger mass of grey will balance a smaller mass of a proportionately darker tone.

Points on Grouping.

WHILE flowers are always popular for still-life groups because they have a universal appeal and lend themselves to decorative treatment, they must, in common with all other subjects, be treated as an arrangement of so much light and shade as well as for contours, etc.



If we study the top illustration we are not at all convinced that the flowers are the main object of interest. The fault lies largely with the selection and position of the vase. It is not of sufficient "strength" to hold the flowers, and gives a feeling of weakness. The vase should be of a more simple shape, and, for this type of subject, not too decorative in itself. Another common practice with flower groups is to place one bloom on the ground near the vase. Although this is rather hackneyed, it has its good points in providing variety of placing and repetition, but it must be placed so that it is part of the group and not detached like that in the top sketch.



In contrast to the first group, the second sketch shows an arrangement where the flowers and bowl form a mass that suggests too much solidity and not enough variety in outline. In the first instance, the contour of the flowers and the bowl form a rather monotonous circle and is, consequently, uninteresting. If we take the same bowl and re-arrange the flowers after the manner shown underneath, we can quite easily make an attractive picture of it. Not only is the contour more varied but the arrangement of the blossoms themselves is also less regular.

Cloud Perspective and Double Printing.

THIS hint is concerned only when a separate cloud negative is being employed for filling up a blank sky on another landscape or seascape.

Although it is not commonly known, clouds have a "vanishing point" in their perspective, just as much as any other object on the ground or on one side. The term "vanishing point," when used in perspective, means the point on the horizon to which all lines of a given object tend to converge. With any object supported on or parallel with the ground the vanishing point of their principal lines will be on our visual horizon. In this way, lines on the ground, such as tram lines, pavements, etc., on one side, such as railings, roofs, etc., as well as those above us, i.e., the clouds, all converge to one particular point somewhere along the horizon. This vanishing point is also always immediately in front of the eyes. So we see that this fact must always be borne in mind when we wish to print the clouds from another negative on to another picture.

Let us imagine that we want to print the clouds as in the sketch on the left, which has an uninteresting foreground, on to a more interesting landscape like that in the right-hand sketch. The natural vanishing point for the clouds is at A, and if, for some reason or other, we printed it so that the vanishing point were lower than the horizon, we should introduce an unnatural occurrence, which would not only reveal a double printing but would look entirely false. The true vanishing point would be anywhere along the horizon, as at B.

"Snap" this opportunity!

THE PROJECTOR YOU HAVE BEEN WAITING FOR

CORONET MODEL II 9.5 MM. PROJECTOR
BUILT TO THE PUBLIC'S SPECIFICATION

1. Sprocket drive, no claws, making damage to films impossible.
2. Absolutely self-contained, no extra resistances lying around to trip over in the dark.
3. Flickerless pictures, achieved by the use of accelerated intermittent movement.
4. Brilliantly illuminated screen.
5. Silent running.
6. Geared rewinds 5-1 ratio, rewinding in a flash.
7. Combined lamp and wall plug, no searching for an adaptor.
8. 30, 60, or 400 ft. reels without adjustment.
9. 1" Anastigmat projecting lens, giving a brilliant picture approximately 40" × 30" at a 10' throw.
10. Any voltage 100—250. Any current A.C. or D.C. No supplementary resistances required.

Obtainable from all good Photographic Dealers.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents, not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Autumn Studio Work

By S. E. L. MOIR.

AMATEURS contemptuously familiar with studio work have encountered numerous (though avoidable) difficulties in the past; those who are about to commence such work do not expect to "get away with it"—as the saying goes—on a bed of roses.

It is not that the difficulties are merely avoidable, for, properly regarded, studio work presents many opportunities that may be exploited actually to simplify film technique. It offers, for example, all the facilities which lend themselves to faultless "tracks," swings and the various travel shots; it offers scope for adequate rehearsal—away from the disturbing influence of strange crowds, and there is the tremendous advantage which comes from being able to control every detail of the lighting.

Ever it has been the very simplicity of it all which has led to confusion. Regard the studio as a workshop for the creation of *filmic* effects, and all will be well; try to imitate the stagy settings of the professionals—those deplorably uncinematic arrangements—and you will encounter all the difficulties without making more than a mediocre film.

Illumination.

Now, lighting is a very painful subject with many amateurs. I can remember one capable society actually concentrating upon the acquisition of enough illuminant to flood the Albert Hall—and then doing nothing of note with it. Ironically enough, that same society knows well enough how those effective films "Gaiety of Nations" and "Retrospect" were made with about as much light as one would expect to find on a coffee-stall at midnight!

Most amateurs, indeed, can verify from their own experiences that the abundant possession of floods, spots and banking has seldom helped them on the way to better productions. It has merely given rise to those unfamiliar problems; and the result has been distressing in at least the few first films made under such "advantageous" conditions.

From this it may rightly be inferred that amateurs about to embark upon studio activities need not be unduly perturbed over the fact that full-scale lighting is frightfully expensive or very difficult to install. Their very efforts to economise will tend, by the nature of this, to help forward rather than to restrict their activities.

Skill.

It is obvious to all intelligent makers of films that cinematic treatment is most easily applied in terms of *effect*. And I do not hesitate to say that practically the whole of known effects can be presented more convincingly by one skilled amateur using ordinary lighting than they can by a careless producer equipped with a whole power-house of illumination.

Of course, not all of us come to the hobby highly polished in expert skill. It simply doesn't happen. But we are able to acquire much of that skill merely by not dissipating our energies through aimless and undirected work.

Rather should we get into a good society. (So ardent is the atmosphere in a healthy club-room that even the "old hands" of cinematography are able to find inspiration and encouragement.)

Not-so-good tendencies are occasionally still to be encountered. They may be found as a primary concentration of interest upon "gadgets" or upon the *photography* of film—nor do they persist long after the coming of the member who places film first and the various accessory factors after.

Further skill of the kind under discussion can be acquired by analysing those good films which have been made under conditions of humble lighting. In addition to the productions already referred to, interested readers are advised to see "Fall of the House of Usher," "Staff of Life," "Night Scenes," and "Fight." Then some of the greatest films in the whole world of cinema, e.g., "General Line" and "The New Babylon," were made with a deliberate economy of illumination; these and parts of the commercial productions "Steel," (Capelli), "Masquerade," "*Letzte Rose*" and "*Sans Famille*" (Allegret) also should be seen.

On the Set.

In order to minimise the effects of working within a restricted space, it is

Although accompanied by a certain amount of risk, very striking action pictures are to be obtained at the various "demonstrations" in the parks and elsewhere at the present time. This work, in any case, is good training for securing "news reel" subjects.

important in all studio work to avoid crowding the set with idle members and spectators. Always the film should come first, and the task of teaching people outside the actual unit should be undertaken only on occasions when their presence is not likely to affect the making of an important film.

In the studio, too, it is essential for each member to understand his duly allocated tasks and to stick to them. Punctuality also assumes a significant importance, for the absence of one member can easily hold up the work of the entire unit. I remember one occasion on which a well-known and able amateur camera-man turned up over an hour late on a famous film of Rudolph Messel's. Rudolph took charge of the camera and got on with the job—much to the ultimate concern of the unpunctual camera-man, who has never been late since !

There must further be free co-operation between the various departments concerned in the making of a studio film. Shooting depends upon the lighting and the cameras. These depend upon the presence of *freshly* made-up actors—and the make-up man will not finish his work until the sets have been erected. And this, in turn, depends upon the arrival of the entire unit (since all are expected to help the carpenter-props in his difficult task).

Finally, there must be no discussions framed to revise the adopted scenario. It may truly be said that the success of the studio film is in jeopardy with the making of the first alteration—and no degree of technical efficiency can compensate for a loss of smooth continuity.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, October 21st.

Battersea Men's Inst. C.C. Annual General Meeting.
Bayswater and Paddington P.S. "People I have Shot." James Jarché.
Birkenhead P.A. Demonstration—Bromoil. Dr. R. L. Okell.
Birmingham P.S. (Ciné Sec.). "Designs for Titles." Neville Smith.
Brighton and Hove C.C. A Bromoil Demonstration. H. G. Martlew.
Coventry P.C. "How to Obtain Suitable Negatives for Extreme Enlargements up to 50×." J. N. Cockin.
Croydon C.C. "The Kodachrome Process." S. T. Ternouth.
Ealing P.S. First Pictorial Competitions and Criticisms.
Edinburgh P.S. "The Negative." A. H. MacLucas.
G.E. Mechanics' Inst. P.S. Practical Portraiture—Members' Evening.
Hinckley and D.P.S. Demonstration on Enlarging. T. H. Houghton.
Howard de Walden P.C. Whist Drive.
Leigh Lit. S. Whist Drive.
L.M.S. (London) P.S. "Quips, Oddities and Ramblings." T. D. Nunn.
London School of Hygiene P.S. Gevaluxe Demonstration. R. S. Beck.
Northallerton and D.P. and C.S. Isle of Man Competition Slides, 1935.
Shropshire C.C. Members' Query Night.
S. Suburban and Catford P.S. "Some Pictorial Views." E. C. Butcher.
Watford C.C. "Paper Negatives." Harold Ranson.
Worcestershire C.C. Members' Evening.
York P.S. Portraiture—Lecture and Demonstration. W. Richardson.

Thursday, October 22nd.

Accrington C.C. "The Evolution of Photographic Lens." T. C. Egan.
Armley and Wortley P.S. Prints and Lantern Slides by Transferotype Process. W. H. Hammond.
Ashton-under-Lyne P.S. Members' Slide Night.
Bolton C.C. "Around France with Car and Camera." Capt. J. C. O. Dickson.
Brighouse C.C. "The Negative." G. Prothero.
Bury P.S. "Peopling an Old-world Mansion by Flashlight." F. Sellers.
Camberwell C.C. Lecture.
Camping Club of G.B. (Photographic Section). "With Camera in America." L. E. Cohen.
Derby Rly. Inst. P.S. Federation Portfolio and Slides.
Gateshead and D.C.C. "Here, There and About." T. Charlton and M. Young.
Greenock C.C. S.P.F. Monochrome Lantern Slides.
Hammersmith House P.S. "The Kodak Research Laboratories, Harrow." E. W. H. Selwyn.
Hull P.S. Portraiture Evening—Practical Work.
Keighley and D.P.A. Y.P.U. "Historic Homes of Yorkshire." S. Greenwood.
Liverpool A.P.A. President's Evening—Whist Drive.
Loughborough P.S. Ciné Exhibition. Messrs. F. Monk and W. Winters.
N. Middlesex P.S. "Colour Slides." V. H. Cohen.
Oldham P.S. Lecture and Demonstration on Chloro-Bromide. J. Hector Woods.
Padiham and D.P.S. "Lantern-Slide Making." R. Watson.
Stourbridge Inst. P.S. Competition—Civilisation.
Urmston and D.P.S. Bromide Printing and Slide-Making Demonstration.
Wimbledon C.C. "Gevaluxe Velours." R. L. Beck.

Friday, October 23rd.

Royal Photographic Society of Great Britain. Informal Meeting of Kinematographic Group.
Derby P.S. "5,000 Days at the Zoo." J. E. Saunders.
Harrogate P.S. "Highways into Spain." D. W. Shaw.
King's Heath and D.P.S. "Cameras, and How to Get the Best out of Them."
Leigh Lit. S. (Photographic Section). L. and C.P.U. Slides.
P.S. of Ireland. "Photographic Process Work." J. B. Aikin.
Southend-on-Sea and D.P.S. "Combination Enlarging." W. E. Ginger.
Walkden and D.P.S. "Beauty Spots of Great Britain." T. Woods.

Saturday, October 24th.

Blackburn and D.P.S. "Summer Months in the Outer Hebrides." G. B. Keary.
Hammersmith House P.S. Criticism of Monthly Print Competition. A. J. Milne.
Howard de Walden P.C. Criticism of Members' Prints.

Monday, October 26th.

Bexley Heath P.S. "This Pictorialism." Debate. R. S. Rudland and F. H. B. Smith.
Blackpool and Fylde P.S. "Enlarging." T. Howarth.
Bournemouth C.C. "Method for Eliminating Guess-work in Making Bromide Enlargements." J. Reid.
Bradford P.S. Slide Night. J. C. Holmes.

Monday, October 26th (*contd.*).

Brighton and Hove C.C. Beginners' Evening. Lantern-Slide Making.
Camera Club (Leica Section). "Processing the Leica Film." First Day of Annual Exhibition.
City of London and Cripplegate P.S. "Exposure and Development." N. F. Horne.
Edinburgh P.S. Exhibition of Photographs by Members of P.P.A.
Kidderminster and D.P.S. "A Chat on Colour Filters." S. Bridgen.
Kingston C.C. "Romance of Old English Inns." H. W. C. Carmen.
Lancaster P.S. "Modern Aids to Indoor Portraiture." S. Schofield.
L.C.C. Staff C.C. "Agfacolor Process." L. Penwarden.
Leeds C.C. Portraiture by Floodlight." H. B. Thomson.
Liverpool A.P.A. "Soltaz." A. v. R. Van Oudtshoorn.
Newcastle (Staffs) and D.C.C. "Set of Prints on Press Photography." Allied Newspapers, Ltd.
Padiham and D.P.S. "A Choice of Printing Papers." J. Y. Brown.
Shropshire P.S. "With a Ciné Camera in Spain and Morocco." Dr. G. W. Morey.
Southampton C.C. "Bird's-nesting with a Camera." W. A. Chaplin.
Southport P.S. "Flower Photography." F. W. Banks.
S. London P.S. "Portraiture." R. M. Barr.
Wallasey A.P.S. Alliance Lecture: "Sunny Italy." H. O. Fenton.
Walsall P.S. Lantern Slide Postal Club 1936–7 Exhibition Slides.
Walthamstow and D.P.S. "Still Life." By Members.

Tuesday, October 27th.

Royal Photographic Society of Great Britain. Meeting arranged by Scientific and Technical Group.
Armstrong Whitworth C.C. "The Art of Lantern-Slide Making." W. J. Brown.
Birmingham P.S. "The River Cole." Canon E. L. Cochrane.
Bridge of Allan P.S. "Eastern Life and Customs." Rev. T. C. Gordon.
Doncaster C.C. Y.P.U. Demonstration—Bromoil. W. E. Gundill.
Erdington and D.P.S. "A Chat about Colour Filters." S. Bridgen.
Exeter C.C. Photographic Alliance 1935 Competition Slides.
Grimsby P.S. "Cleethorpes Carnival, 1936." R. Haig and L. Sleigh.
Guildford and D.C.C. "After-treatment of Prints." Mr. Linney.
Hackney P.S. "Some Slides and How they were Made." P. A. Belcher.
Halifax P.S. "Lantern-Slide Making." H. G. Grainger.
Harrow C.C. Demonstration on Enlarging. J. Ainger Hall.
Leeds P.S. "The Kodachrome Process." S. T. Ternouth.
Leicester P.S. "Contax, Contaflex and other Miniature Cameras." Zeiss Ikon, Ltd.
Manchester A.P.S. L. and C.P. Union Print Folio, 1936. Dr. G. Jessel.
Monklands P.S. S.P.F. Portfolio.
Morecambe, Heysham and D.P.S. "The Amateur Photographer" Prize Slides, 1935.
Newcastle and Tyneside P.S. "The Charm of Wales." T. Charleton.
Newport and Mon. P.S. Members' Print Competition.
Nottingham and Notts P.S. "African Travel" (Ciné). Miss S. M. Mellors.
Palmer's Green Ciné S. Discussion—Stills.
Portsmouth Camera and Ciné C. "Enlarging."
Rugby and D.P.S. "The Coasts of France and Italy." Rev. H. O. Fenton.
Sheffield P.S. "The Leica Camera." Messrs. Leitz, London.

York P.S. Lantern Lecture. Y.P.U. Shield Lantern Slides.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Stand by for Annual General Meeting

By M. A. LOVELL-BURGESS.

THIS is the time when most ciné clubs hold their annual general meeting. And this meeting is more than an occasion for electing officials and collecting subscriptions. It is the club's barometer. One glance at it can tell you how the club stands.

What sort of an annual meeting do you have at your club? Do you trouble to go? Are the same officials re-elected automatically? Are members who are not officials welcomed and encouraged to speak? Is there any new matter up for discussion on the agenda?

The annual general meeting marks the beginning of a new year for the ciné club and, like all new years, it should have its good resolutions. If you are fortunate enough to enrol new members at the meeting see that each new member gets a definite assignment in a specific department. If you have so many members that this is no longer feasible announce the formation of groups or units.

How many speakers have you had from other ciné clubs during the year? How many amateur films from other clubs have been shown in your studio? Have you sent films or speakers to other clubs, or done anything to link ciné amateurs together nationally or internationally?

Here is an idea for the winter season. Set one night aside—preferably Saturday—for a Saturday Magazine, or "In Town To-night," feature in your studio. Members could take it in turn to act as compère and bring to the real, or imaginary, "mike" the property man, with his troubles and demands, the cameraman, the film editor, the script girl, the various players with some such reminiscences as the most-difficult-part-I-ever-played. If some members are at a loss as to what to say they can be "interviewed." A gong or "Go–Stop" traffic lights—easily rigged up—would amusingly co-ordinate and control the various items. And you can always "fall back" on a film as a fill-up. Such an evening would be a pleasant change from the usual lecture and would give new members a more all-round insight.

Every keen ciné club should have its own monthly circular or notes, even if they are merely typed. Many a member who is out of touch with his club through missing a couple of meetings is kindled to new enthusiasm by reading of what has been done and, more important still, what is going to be done in the coming month.

Every club should have a purpose—an aim to be realised in a few months' time. Christmas, for instance, or the New Year, should have its own film and its own projection night.

What are your club's plans for the Coronation Year? A unit should certainly be authorised to make the most of the Club's facilities in this respect, both locally and in town. Ask, at the general meeting, which of your members hope to be in town for the celebrations next May, and, if they haven't a ciné camera, promise to lend them one—always provided they know how to use it. Some of the best film records have been made from a number of individual shots, carefully and imaginatively edited.

The Bognor Regis Ciné Society, by careful editing, made some worthwhile records of the Royal Naval Review by our late King in Jubilee Year.

An excellent example of a really keen ciné club is to be found in the Finchley Amateur Ciné Society, whose annual meeting took place on October 19th. This society does not believe in "keeping itself to itself." During October members have visited, or will visit, the Bognor Regis Club, projected films by Sutton and District Movie Makers, sent representatives to the Blackheath Film Society's Gala, projected films by the Austrian State Travel Bureau and Burnley Film Productions, and attended a Rotary supper.

If you make your annual general meeting an occasion for promoting fresh contacts with members, and with other ciné clubs, your own organisation will be the first to benefit.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5 × 3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½ × 3½ × 3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

43. PYRO DEVELOPERS

PYRO-SODA.

THE following is a reliable formula for those workers who prefer this well-tried developer for negatives. The mixed developer (A and B) will not keep and fresh solution should be made up for each batch of plates or films.

A.	Pyro	1 oz. (100 grm.)
	Sodium sulphite (cryst.)	4 oz. (400 grm.)
	Citric acid	40 grs. (10 grm.)
	Water to make	20 oz. (1,000 c.c.)
B.	Sodium carbonate (cryst.)	4 oz. (400 grm.)
	Water to make	20 oz. (1,000 c.c.)

The citric acid may be replaced by 1 oz. (100 grm.) of potassium metabisulphite if stain-free negatives are required.

For use take of A one to two drachms (3 to 6 grs. pyro) of B two drachms (24 grs. carbonate), water 1 oz. Add a few drops of 10 per cent bromide of potassium solution for over-exposure. Dilute with double the quantity of water and reduce the pyro for under-exposure.

This developer (with metabisulphite) diluted with equal parts of water and extra bromide added serves as a developer for bromide papers, giving warm black tones.

It can also be used as above, or with metabisulphite, for developing lantern slides, and produces brown tones.

PYRO-METOL.

A quick-acting developer giving detail in the shadows and suitable for under-exposure.

A.	Pyro	80 grs. (8.32 grm.)
	Metol	70 grs. (7.28 grm.)
	Potassium metabisulphite	180 grs. (18.7 grm.)
	Potassium bromide	30 grs. (3.12 grm.)
	Water to make	20 oz. (1,000 c.c.)
B.	Sodium carbonate (cryst.)	3 oz. (136 grm.)
	Water to make	20 oz. (1,000 c.c.)

Use equal parts of each for correct exposures.

For over-exposure decrease the proportion of B, for under-exposure increase the proportion of B, and add an equal quantity of water.

This developer, with extra bromide, can also be used for bromide papers.

44. STAINS AND MARKINGS ON NEGATIVES

VARIOUS defects occur in the production of photographic negatives; some of these are due to chemical and some to physical action. Under the former heading are stains and markings produced during development, fixing or drying.

The general yellow stain produced by the use of pyro developer can be removed by clearing the negative in:—

Alum	1 oz.
Water	20 oz.
Citric acid	½ oz.

Hydroquinone stains are more irregular and are more difficult to remove. They can, however, if not too intense, be cleared by the application of dilute hypo-ferricyanide reducer, but the action must be watched carefully and stopped at once if the image itself is attacked.

Intensification stains, particularly after the use of mercury, can generally be modified or overcome by rebleaching and redeveloping.

Iridescent surface markings of a bluish or greenish tinge occur sometimes with stale plates or films, or occur on negatives that have been kept in an impure atmosphere. They are usually to be seen round the edges of the negative, and can be removed by rubbing the dry film with a wad of cotton-wool moistened with methylated spirit. A quicker method is to rub the stain away with an application of Baskett's reducer. This is:—Terebene 2 oz., salad oil 2 oz., Globe metal polish 2 oz., mixed thoroughly and strained through muslin. Apply with a wad of cotton-wool.

Scum markings, which may arise from the use of stale developer or stale fixing bath or impurities in the washing water, and may occur on both sides of the film, can be removed by friction in the same manner.

Stains sometimes occur on negatives after the use of permanganate of potash, due to minute particles of permanganate remaining undissolved. The following bath has been tried successfully for this trouble:—

Water	10 oz.
Sodium sulphite	2 drs.
Acetic acid	1 dr.

Ink stains on negatives can generally be removed by bathing the plate or film in a dilute solution of oxalic acid. Markings caused by aniline ink, such as is in use for copying pencils and pads, etc., are removable by bathing in water slightly acidulated with hydrochloric acid.

Finger marks and grease spots on negatives may be cleared with a tuft of cotton-wool moistened with methylated spirit or petrol, or by Baskett's reducer as above.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1." and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Time and Temperature.

What advantage is there in using the time and temperature method of developing? I always thought that it was better to watch the negative develop so that the development contrast could be suited to the subject. J. G. (Newcastle.)

One advantage of the time and temperature method is that, according to the strength and character of developer used and its temperature, a time can be fixed to provide any desired contrast in the negative without having to inspect it from time to time. This is particularly useful in tank work, where once the film or plates are in the tank, the processes of development, fixing and washing can be carried out in bright light and the negatives need not be inspected until after they are washed. Development by inspection is useful where individual attention is to be given to each negative, but unless one is experienced in this method of developing, the results are not so consistent and so good as with the time and temperature method.

Stop-Bath for Prints.

In a recent article in "The A.P." the use of a stop-bath was mentioned for making gaslight prints. What is it for and how can I make it up?
C. D. J. (Walsall.)

The purpose of a stop-bath for prints is for stopping immediately the developing action in the emulsion after the print has been removed from the developer, prior to fixation. A suitable stop-bath for gaslight prints is made by mixing 1 oz. of acetic acid in 20 oz. of water. The print is taken from the developer and given three or four seconds' immersion in the stop-bath before placing it into the hypo. It is immaterial whether a plain or acid hypo bath is used. A stop-bath also neutralises the alkali that remains in the emulsion so that it will not be carried over into the hypo and so contaminate and colour the fixing-bath.

Copying Colours.

What plate and filter should I use to copy a machine drawing in which yellow, red, blue and black lines appear and to make all these lines to be as black as possible on the print?
C. D. F. (London.)

This is a difficult problem that will need careful handling to secure a satisfactory result. Obviously a panchromatic plate and filter—although suitable for emphasising the blue—would fail to register the yellow and red sufficiently. To make the most of all the colours the best plan will be to try a slow "ordinary" plate and no filter. This will render the yellow and red as black, and the blue, if strong, will be recorded as grey. In view of the fact that they are lines and not tones you can safely expose the plate for a shorter time than usual and over-develop it in order to give greater contrast. If the lines are not as clear as desired, immerse the negative in Farmer's reducer and this should give all the contrast desired.

Neutral Density Filter.

What is a neutral density filter and what function does it serve? D. C. A. (Barnet.)

In appearance, a neutral density filter looks like a piece of lightly-smoked glass and, as its name implies, its function is not to absorb particular colour rays, but to absorb *all* colours to a certain extent and, as far as possible, each with the same degree of absorption. This filter is used mostly in cinematography on lenses where the smallest stop is about f/11 and its purpose is to cut down the strength of all the incoming rays to prevent over-exposure; in other words, it has the same light-reducing effect of a smaller stop. There are other occasions where a small stop would be unsuitable, such as giving too great a depth of focus and here a density filter would allow a larger stop to be used and give the desired selection of focus and without altering the running film speed to ensure accurate exposure. These density filters can be obtained in various depths of densities.

Baskett's Reducer.

The Globe metal polish paste for Baskett's Reducer is not obtainable in this district and I was wondering if the liquid variety would do instead? F. L. K. (Ilford.)

It is quite in order to use a liquid polish as a substitute for the paste, but it is essential to filter the mixture several times through a fine fabric to be perfectly sure that there is no grit left that would damage the emulsion.

Ferricyanide Stain.

How can I clear away the stain on a negative caused by local reduction with Farmer's Reducer?
J. G. (Exeter.)

The stain which was caused by the potassium ferricyanide can usually be removed by immersing the negative in:

Nitric acid	.. ..	30 min.
Alum	.. ..	30 grs.
Water	.. ..	10 oz.

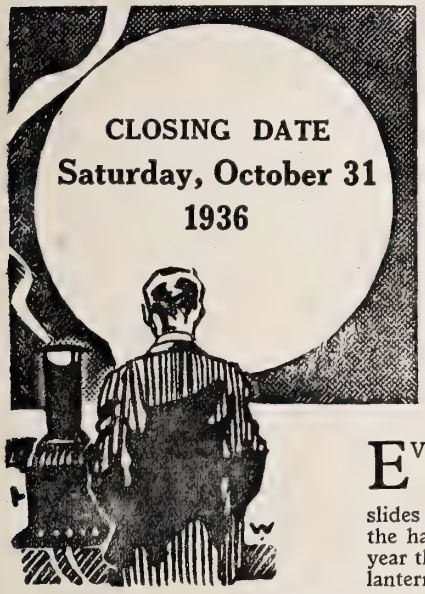
As soon as the stain has disappeared, remove the negative and wash for twenty minutes.

Filing Negatives.

What is the best method of filing away roll-film negatives of 16 to $3\frac{1}{4} \times 2\frac{1}{4}$ roll-film size? I do not want to keep them all on one spool as is customary with miniature negatives.
O. D. (Balham.)

We would suggest that the spool be cut into eight portions so that two negatives appear on the same piece of celluloid and enclose each piece in the transparent envelopes made for $2\frac{1}{4} \times 3\frac{1}{4}$ negatives. These envelopes containing the negatives can then be filed under a card index system similar to those supplied for our "Facts and Formulæ" cards. These special envelopes can be obtained from most photographic dealers. Not only are they more convenient than ordinary correspondence envelopes by being transparent, they are chemically pure and ensure that the negatives will not be harmed in any way. Special negative filing albums are also available for this purpose in which the transparent containers are stitched together like leaves in a book and in conjunction with the serial number on each flap an index is supplied on which can be written the particulars of each negative.

Dope for Bromides.



Can you please repeat the formula for the surface dope for bromides and chloro-bromides? How long does it take to dry?
G. M. L. (Eastbourne.)

The following is the formula for the dope most commonly used:

Turpentine	.. ..	2 parts
Mastic varnish	.. ..	1 part
Linseed oil	.. ..	1 part

Each should be of artist's quality for the best results. Mix well and shake before using. If the dope is not laid on too thick, the surface should be dry enough for handling purposes in two or three days. If the turpentine is increased to 3 parts, the dope will dry out a little quicker, but the sheen is not so bright.

The Amateur Photographer & Cinematographer

ANNUAL
Lantern-Slide Competition
1936

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Saturday, October 31st.

Classes and Subjects.

CLASS I.—Landscape with or without figures, sea subjects and river scenery.

CLASS II.—Portrait and figure studies, whether indoor or outdoor pictures.

CLASS III.—Architecture, interior and exterior.

CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

CLASS V.—Natural History subjects.

CLASS VI.—Lantern slides in colour (not hand-coloured).

CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not *accompanied* by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Saturday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

PHOTOGRAPHY MADE EASY

THIRD EDITION

REVISED THROUGHOUT

By R. CHILD BAYLEY

Author of "The Complete Photographer," "Hand Cameras," "Photographic Enlarging"

Crown 8vo. 250 pp. Stout paper covers

Price **2/-** net By post **2/3**

Obtainable from all leading booksellers, or direct by post from the Publishers

AS EASY AS A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

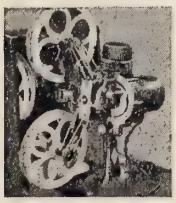
Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.



"I can hardly recognise my films on your Projector."

This is a daily remark in our ciné showrooms when showing customers' films.

A good projector makes all the difference to your films and a high-power lamp brings out all the detail.

Here is the best Silent 16-mm. Projector in the world.

BELL & HOWELL S. T. PROJECTOR

750 WATT.

Reverse, forward and still device. The "Filmo" is so well constructed you can use your personal films with it for years and they will show no signs of wear.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

Here are the first of the *new* PHOTO-GUIDES — four little books crammed from cover to cover with the information you know you need. Between them they answer every question that has ever perplexed you and put you on the real road to success in photography

1. **"A GOOD PICTURE EVERY TIME"** explains the rules that govern pictorial composition, tells you how to make every snap an "exhibition" picture.

2. **"SHARP-FOCUS/ACCURATE EXPOSURE"** gives you easily understood and *easily remembered* rules for deciding the correct setting of distance scale, lens aperture and shutter time.

3. **"130 PHOTOFAULTS"** covers every stage of photography from camera-loading to enlarging, giving the cause and cure for every fault that's ever worried you—or ever likely to.

4. **"TAKING PICTURES AT NIGHT"** will convince you that your camera is capable of incredible achievements, will show you how perfect night pictures can be secured with even the smallest, simplest camera.

Price 1s. 1d. each, or post free 1s. 3d. The four books, 4/6 post free.

BOOKS ABOUT PHOTOGRAPHY with MINIATURE CAMERAS

Pictorial Photography with the Miniature Camera. By Edwin C. Buxbaum, A.R.P.S. Shows how the miniature camera can be used for pictorial photography. 2/6, postage 2d.

'EXAKT' ENLARGER PRICES
AN APOLOGY

In the last two issues of *The Amateur Photographer*, the "Exakt" Enlargers have been mistakenly advertised in Messrs. City Sale's advertisements at prices "from £8 10 0." The lowest retail price is £12 15 0. The advertising agents responsible for this mistake apologise to Messrs. R. F. Hunter Ltd., the "A.P." readers and the photographic trade in general for any inconvenience which this unfortunate mistake has created.

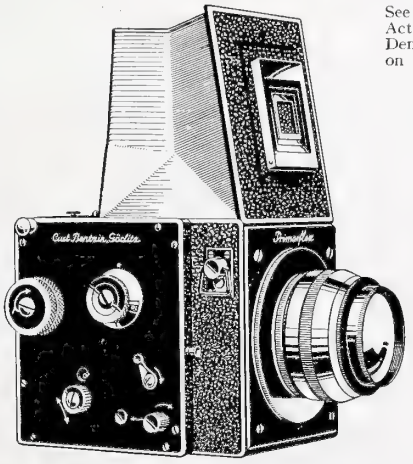
HEAR ALL THE LATEST TALKIES at BOND ST.

We have all the latest sound-on-film productions in our comprehensive library.



DE VRY.—The first 16-mm. Sound Projector with the famous sprocket intermittent and silent chain drive. **No lost loops,** so frequent with the claw movement. Operates in an enclosed oil system. Has radio-type illuminated control dials. Has double sound filter to ensure even flow of all sound frequencies. 1,000-watt concentrated filament lamp. Complete in two carrying-cases. . **165 gns.**

"138" FILMOSOUND.—Filmosound is sold complete in one case. In use the combined projector and amplifier unit is removed from the case, while the cover serves as the baffle for the self-contained loud-speaker. Two models are available, the 138A, with 500-watt lamp and two film speeds (for running either silent or sound films), and the 138B, with 750-watt lamp, which operates at sound speed only **£138 0 0**

ANY OUTFIT ON EASY TERMS.

THE NEW PRIMARFLEX

See this latest miniature camera. Actually in stock at Bond Street. Demonstration willingly given on request.

Takes 12 pictures 2¼×2¼ in. on standard 3¼×2¼ roll films; also 4½×6 cm. plates.

SPECIAL FEATURES:

One revolution of winding-knob automatically and simultaneously performs four functions—i.e., winds shutter, sets mirror, operates film counter, winds film. Self-capping focal-plane shutter, 1 to 1/1,000th sec., T. and B., deep focussing hood with magnifier, additional direct-vision finder, interchangeable lens mount.

Making "Light" of Photography at Night

More and more photographers are discovering that the advent of winter does not end the photographic season—but it is the time when new and different subjects become available.

With Selo Hypersensitive Panchromatic Roll Film or Ilford Hypersensitive Panchromatic Plates in the camera, effective outdoor night pictures and pleasing indoor studies are easily obtained.

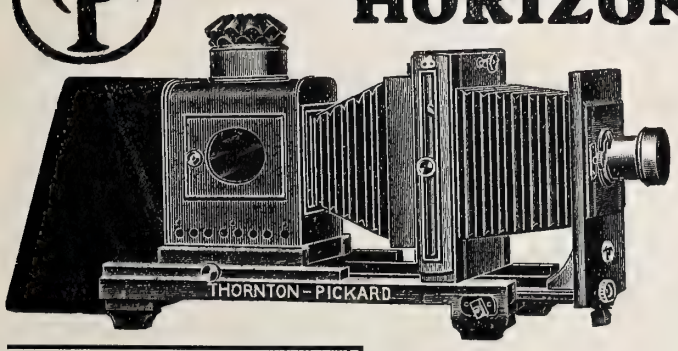
A 'New Deal'

for Amateur Photographers

How the above picture was made: 3 "Photoflood" Lamps in "Kodaflector" Reflectors were used as shown in diagram. Exposure: 1 sec. f11 on Kodak S S Pan Film.

Photography made easy at times when it used to be difficult and in places where it used to be impossible; placed on an all-through-the-year, all-round-the-clock basis; given the freedom of the home as well as of the field and beach — it is not too much to say that the introduction of Kodak Super Sensitive Panchromatic Film and the Kodak Night Photography Aids has meant a completely 'New Deal' for everyone with a camera. Have you taken advantage of them yet?



See your Kodak Dealer about the "Photoflood" Lamp (2/6); the "Kodaflector" Reflector (3/-); the "Kodaflector" Outfit, including Reflector, Stand, and 9 ft. of flex (7/6).

A CHANCE FOR EVERY AMATEUR!

Wallace Heaton's "OPEN" PHOTOGRAPHIC COMPETITION

FOR GOOD PHOTOGRAPHY—ANY SUBJECT —BY ANY AMATEUR—WITH ANY CAMERA!

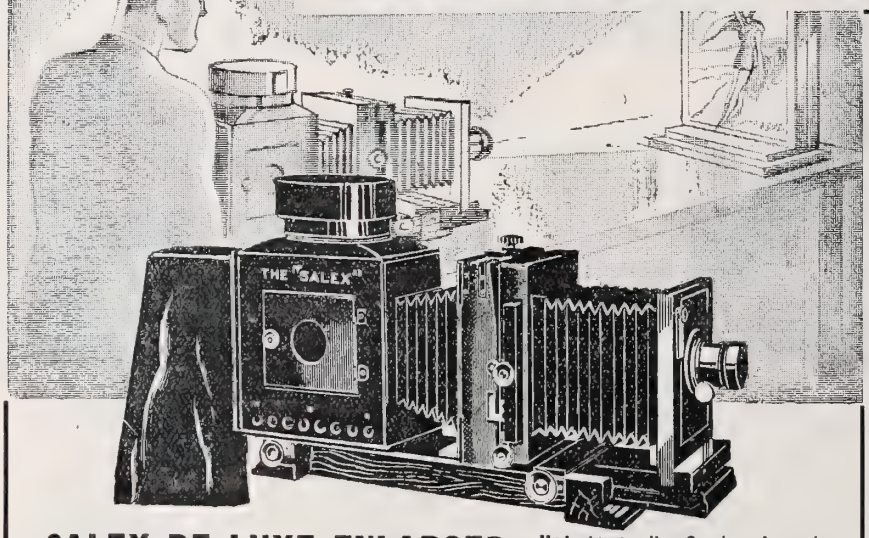
If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Enlargements, of course, are allowed—in fact, we recommend an $8\frac{1}{2} \times 6\frac{1}{2}$ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

An Exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners.

WIN £25

£25 FIRST PRIZE FOR THE BEST SNAP SUBMITTED DURING COMPETITION!

21/- also awarded for each week's best entry!



COUPON *which must be affixed to the back of each entry.*

HEAR THE LATEST HOME TALKIES AT "CITY SALE"

PATHÉSCOPE 17.5-mm.

A first-class selection of films is now available for the Pathéscope Talkie. More are in preparation and all are for hire or purchase outright at a fraction more than for silent films. The Talkie, comprising Amplifier, Loud Speaker and 17.5-mm. Projector, without stand, costs **£60** in all.

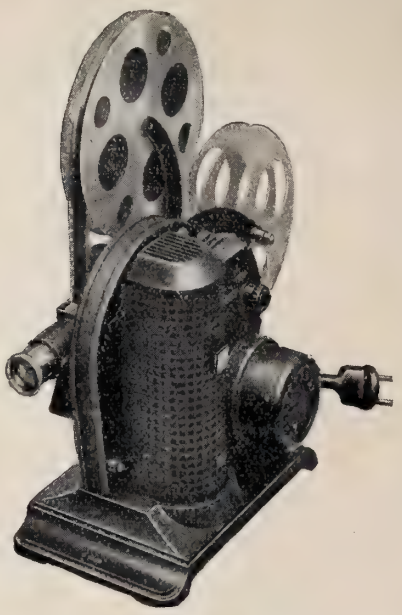
16-mm. GEBESCOPE Model A

Comprising Projector, 2 speeds (silent and sound), 2½-watt amplifier and loud speaker. Perfect tone, perfect projection. Handy and portable.

£95 : 0 : 0

Or on Easy Terms.

EASY TERMS & EXCHANGES!



Anything on 9 monthly instalments. First payment secures the goods. High allowance on your surplus apparatus in part payment for your fresh purchase.

SALE & EXCHANGE (1929) LTD.

Agfa

DOMESTINO 16-mm. PROJECTOR

A simple machine, inexpensive to purchase and run, yet giving excellent projection. Small and compact with folding spool arms that automatically lock in the extended position. 100-watt projection lamp, 35 or 50 mm. focus lens (lenses are interchangeable), takes spools up to 400 ft. Threading is very simple and the projector can be dismantled for easy cleaning. Integral resistance for 100/220 volts, motor speed control, automatic safety shutter for "stills." Motor is very rigidly built in. Supplied complete and ready for use, including rewinder, oil can and gate cleaner and reel.

AGFA PHOTO LTD.

1-4, Lawrence Street, High Street, London, W.C.2

Sole distributors of Agfa photographic products for U.K. and I.F.S.

PRICE £17 Complete

CARRYING-CASE 15/-

Send for full details of the Agfa range of 16-mm. projectors, including the Super 16 for use in large halls, etc.

LEADERSHIP IN DESIGN AND PERFORMANCE

The Paillard-Bolex Model G.3, giving Trifilm projection and a host of other ciné refinements, stands out as the most important addition to projection technique during the past year. Backed by Paillards' many years' experience in the manufacture of projectors, showing more than one film size, the G.3 is outstandingly superior both in design and performance to any other projector on the market. Compare it point by point with other machines and you will see how much more the G.3 gives in performance and value: Trifilm projection, showing 8-mm., 9.5-mm. or 16-mm. films. Greatest screen illumination of any projector on the market, *not excluding those with 750-watt lamps*, plus perfect definition. Automatic reverse action (see your films run backward). One hundred per cent gear driven, avoiding all belts. Specially designed gate and pressure pads of stainless steel assuring minimum film wear.

Possibility of using special short focal length lens, giving quite a big picture from 8-mm. at a relatively short throw. Paillards lead—others follow—but remember, only the Paillard can give the same range of refinements or perfection of performance.

G.3 Projector, with accessories, fitted 2-in. lens and 500-watt lamp **£60**

Hugo Meyer special eccentric f/20 mm. lens for projection of 8-mm. film **£4**

Model G.916, for projecting 9.5 and 16 mm. films, price with Dallmeyer 2-in. lens and 500-watt lamp... **£47**

The Success of a Lantern Slide

As with prints so with lantern slides—the vital thing is the subject—and that is for you to capture. But just look through your subjects and imagine them invested with the brilliance and warmth of MEZZOTONE (as you have so often seen in an exhibitor's winning slide), then think of the help you get from the bromide speed that enables you to produce by reduction.

The ONLY Projector

that allows you to 'view' your films!

This unique machine in its new form is indispensable to the amateur cinematographer.

In addition to being a projector, independent of mains electricity, which can be easily slipped into the pocket, it is also an ideal viewing apparatus.

In this latter form the Presenta Pocket Ciné allows one to see the film in motion without the aid of artificial light and is especially useful for "editing."

The improvements incorporated in the new model prevent the film from slipping off the winding handle and eliminate all possibility of scratching and tearing.

All users of 9.5-mm. films will find the P.P.C. ideal for showing and viewing their films, always ready for instant use and providing a constant fund of entertainment.

MAKE MONEY *with your camera*

We want all types of interesting Photographs from everywhere for publication in thousands of newspapers, magazines, etc., all over the world.

Here is a wonderful opportunity for YOU to "cash in" with your camera! Any ordinary camera will do. No particular experience or ability is required to commence this NEW profitable profession in **YOUR SPARE OR FULL TIME.**

It is an occupation with permanent MONEY-MAKING possibilities **FOR YOU.**

CONVERT A FASCINATING HOBBY INTO A WELL-PAID PROFESSION IDEALLY SUITED FOR BOTH MEN AND WOMEN.

You will enjoy the work, it is intensely interesting. You can devote just as much or as little time to it as you wish—we want indoor as well as outdoor pictures taken in rain, fog and snow as well as in sunshine—by day or night, in winter and summer—in city, town, seaside or country, on every day of the year. All suitable photographs are personally submitted to the best markets and highest prices obtained.

PERMANENT MARKETING SERVICE FOR YOUR PICTURES

We offer you the unique facilities of our special Marketing Department *—in accordance with our Marketing Agreement.*

By the J. P. D. "Personalised" Method you will be shown every branch of the profession—from the actual taking, developing and printing of saleable photographs—to advice as to the requirements of editors of newspapers, magazines, periodicals, photographic agencies, advertising companies and other commercial firms.

Also, under our supervision and guidance, successes in prize competitions—regularly conducted by numerous journals—await your best efforts.

"EXAKT"

THE ENLARGING APPARATUS THAT GIVES PROFESSIONAL RESULTS with AMATEUR EASE

Any amateur will feel self-confident when he possesses an Exakt enlarger. He will know that he has an instrument similar to that which trade workers are installing all over the country (a fact which is proof of its efficiency). The Exakt, in a very short time, has achieved such astounding success that its advantages are acknowledged everywhere. Its easy automatic focussing is absolutely foolproof—an enlarging scale and focussing scale are set at the same figure and perfect sharpness is instantly obtained. The mechanism is so rigidly constructed that the perfect focussing cannot accidentally alter, however big a batch of work you are doing. Special value is attached to the interchangeability of lenses, but a STEINHEIL-CASSAR f/4.5 is supplied as standard equipment with all models. The Exakt is supplied in four sizes, for negatives from ciné and Leica size up to 9 × 12 cm., at prices ranging from £12 15s. to £52 10s.

A User Writes:

"The solid construction, combined with the excellent lens and the faultless electrical equipment, makes this instrument a product of which the firm has every right to be proud." D. K.

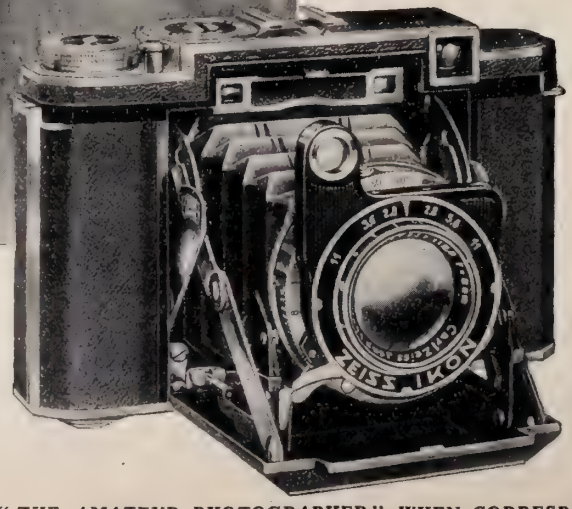
Autumn brings new subjects, both indoors and outdoors

for the keen photographer equipped with a Zeiss Ikon camera and Zeiss Ikon film. Intimate snaps at dinners and dances, pictures of carnivals, photographs of amateur theatrical shows with the usual illumination available, are all subjects which offer new and pleasant opportunities.



With the Super Ikonta $2\frac{1}{4} \times 2\frac{1}{4}$ in. and Zeiss Ikon Panchrom film such subjects fall easily within your capabilities, and the interlocking device will see that in the excitement of the moment you do not make two exposures on one section of film.

Our illustration was taken with the Super Ikonta $2\frac{1}{4} \times 2\frac{1}{4}$ in. with Zeiss Tessar f/2.8, full aperture, exposure 1/50th second, Zeiss Ikon Panchrom film ; lighting, usual gas-filled lamps, 200 watts left, 100 watts right.

Super Ikonta $2\frac{1}{4} \times 2\frac{1}{4}$ in. is equipped with either Zeiss Tessars f/3.5 or f/2.8 and Compur Rapid shutter to 1/400th second. Focussing is performed by coupled distance meter.

VOL. LXXXII. No. 2503.

Topics of the Week

LANTERN and ciné work are phases of photographic activity that are now claiming the attention of vast numbers of amateurs in all parts of the country. Even those who normally do not attempt much outdoor photography at this time of year or during the winter are usually keen enough to be interested in lantern and ciné shows and the production of slides. When these are the evidence of their own prowess with the camera there is an added zest which grows with each successful result achieved. Both beginners and advanced workers will find in the pages of this issue many matters of interest, as most of the articles, etc., deal with lantern and ciné subjects. In particular they will be attracted by the Buyer's Guide, which gives them a complete review of all the necessary apparatus, films and plates, etc., available at the present time.

A Great Revival.

In addition to the keen interest in lantern and projection work there is greater activity in all photographic matters during the present autumn months than in any previous year. This is not a mere optimistic recital, but a statement of the position among amateur photographers that is borne out by facts. We have had occasion recently to deal with a number of important competitions, in addition to those run by this paper. The entries alone in these would convince the most sceptical of this increasing activity and the enormous amount of really good work that is being done. Much of this revival—or rather continuing—of interest in photography into the autumn and winter, long after the period that in the past was marked by the camera being put on the shelf, is a direct result of the possibilities presented by modern cameras, lenses and materials. Not only has amateur photography ceased to be a seasonal hobby, but a new race of photographers has arisen who glory in overcoming the difficulties presented by darker days, longer evenings and the problems of artificial light, and they are all eager to be up and doing. The miniature camera has been largely responsible for much of the new movement. Equipped with one of these remarkable little instruments with big-aperture lenses and high-speed pan. film, scarcely any subject that presents itself by day or night is beyond portrayal. And we have the assurance of the trade that there are very many thousands in use. Some of this activity is reflected in the increased interest in lantern slides and ciné projection work. The small negatives are particularly suited for converting to transparencies, and in this Ciné and Lantern Number of "The A.P." the reader will find many points that will prove helpful in dealing with this phase of photography.

AUTUMN EVENING SHADOWS.

A "new angle" shot that suggests a good action picture for the amateur ciné worker.

For Miniature Camera Workers.

Every reader of "The A.P." who is interested in miniature camera work should make certain of getting next week's issue. A new feature, specially for miniature camera workers, will make its first appearance and will be continued regularly every week. In this way the interests of a very large and growing body of amateur photographers will be catered for. It is particularly appropriate that this new feature of "The A.P." appears at this time. There is great activity among

miniaturists on all sides; the Camera Club is holding an exhibition by members who practise this work, and the Royal Photographic Society has decided to form a miniature camera group. The Society has set up a provisional committee, including workers with the miniature in portraiture, landscape, natural history, press photography, and other lines, and there is talk of an exhibition of miniature camera work.

In press photography, that well-known Fleet Street figure, Mr. James Jarché, recently gave some telling instances of the services of the miniature camera. At the same time, he was critical of the instrument, and thinks that from the pressman's point of view it could be much improved. The shutter is a bugbear, it is too noisy even on the quietest cameras. Also he wants a turret, such as you get in the ciné, so that the lenses may be swung into position quickly to get what is wanted; if possible without need for refocussing. Mr. Jarché said that his was the only miniature camera at the lying-in-state of King George V, and in showing the pictures he took on that occasion he asked his audience to tell him whether there was anything wrong with his angles, and whether there was not more definition in his lights and more architecture in his roof than in the other photographs which were published on that occasion.

People in diverse fields of work united in praise of the miniature during the recent symposium at Russell Square. Mr. Paul Shillabeer declared that since he took up the miniature for advertising subjects his work had not only been better but more enjoyable, simply because the last thing he had to think about was the apparatus. Its use became automatic, and so he could devote his whole time to entertaining the model and watching poses and expressions. Mr. W. G. Briggs acclaimed it for portraiture. True, it did not permit of negative retouching, but that was an advantage in portraits of men and young children, for it only required a little more intelligence to photograph them so that retouching would not be necessary. He admitted that when it came to young and not-so-young ladies a very high degree of skill and selection was needed if the result was to appeal to the sitter. Finally, Mr. G. B. Macalpine spoke of its value in scientific work, where he found that miniature cameras taking negatives 24×36 mm., on standard ciné film, and having interchangeable lenses and coupled film transport and shutter winding, fulfil the requirements for varied types of recording, from the low-power photomicrograph of a finger-print to hand-cut specimens of porphyritic granite, showing zoned phenocrysts.

The new Miniature Camera section of "The A.P." will be well to the front in dealing with the work of these photographers and other matters of interest to all who use the modern tiny cameras.

PREPARING A LANTERN LECTURE

THE photographer who belongs to any sort of society, club or institution has it in his power to provide at least one interesting evening for the members' enjoyment, if not more, and that is by providing a lantern lecture.

First of all, a definite subject must be selected—we'll say old churches. You gather together the negatives you possess of these, and choose those which are good from a negative point of view, because you can't make a good slide from a bad negative. Now put aside those which you feel are only of personal interest to you, and select those of general interest, but do not reject all those of personal interest if you feel that other people will be interested in your personal reasons.

Professionally-made slide-boxes are easily the best type of apparatus in which to store your slides; they can be stood up on end ready for the operator to take hold of, working from one end of the box to the other. In order to see at a glance whether all the slides are in their correct order, it is good practice, when they have been first arranged, to draw a diagonal right across the edges of the binding strips of the slides down the whole length of the full box from corner to corner. It is possible then to see at a glance, by a break in the line, if a slide is either out of place or missing.

Fifty to sixty slides form a useful number for an ordinary lecture, and will occupy somewhere about an hour and a half. Unless it is a very special subject in which the members are very specially interested, it is not wise to exceed this time.

One of the first mistakes most lantern lecturers make is that of relying too much on the slides for the sequence of their remarks, with the consequence that the talk is delivered in a series of jerks.

Preparation is, of course, the only way to avoid this mistake. The lecture should be prepared in detail at home, and written out.

Even if the amateur intends to deliver his talk without notes it should be prepared and read carefully through a number of times in order that there shall be no gaps in the fluency of delivery. There is, of course, nothing to prevent side-tracks and notes being added during the lecture should the person delivering it be competent to do so.

A perfect understanding with the lanternist should be arrived at well before the show is due to begin. Many methods of communication with him have been devised. The main object of these should be to convey to the operator unmistakably the signal for changing the slide, without this being at all obvious to the audience.

The opening remarks and the first few slides are very important in lecture work. It is well known to expert lecturers that if they can get the audience interested right at the commencement, any little uninteresting details will pass by in the course of the talk without boring them. When uninteresting details have to be given, as frequently happens, they should be wedged in between more interesting parts, and not, as some lecturers do, delivered in one heap with the idea of getting rid of them all at once. It is a mistake to make the discourse too long, the rule here being, leave your audience wanting more, not "fed up."

The lecturer, if reading, should remember to take a quick glance at the screen from time to time, as a great deal of disconcerting merriment is often caused by the reader solemnly referring to one object believed to be portrayed on the screen, when all the time something entirely different and often incongruous is depicted there.

A sense of humour is almost a necessity in this sort of work, and there is no reason why the most solemn subject should not be relieved by a touch of humour here and there, providing it is not overdone.

Don't forget to thank the lanternist before you close your lecture, and be sure you have co-operated with him right from the start. E. A.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Points of Importance for Lantern-Slide Makers

The points dealt with in this article should have attention from all slide makers. Attention to them ensures the best effect from the projected pictures.

IT is safe to say that the making of a perfect lantern slide imposes a definite test upon the technical ability of the photographer. The lantern slide is one of the best means of showing the beauty of a good photograph, though it is very unkind to those that are technically imperfect. Even from good negatives there are made many slides which are not nearly as good as they might be solely through lack of attention to the points which are dealt with in this article.

Removing Defects.

It is almost unnecessary to point out that the negative should be free from pinholes, scratches, and all defects of a mechanical nature. This is a standard of perfection that is not always reached, in spite of the high quality of modern plates and films, and the photographer has to remove the defect as well as he can.

In the case of a contact print or an enlargement it is possible to remove these defects so that they are unseen, but it is less easy to do so in the case of a lantern slide. Not only is the work magnified upon the screen so that a minute pinhole may be two inches or more in diameter, but the mistake is often made of doing the spotting with an opaque medium upon a transparent surface.

The ideal is to spot the negative with such care and so well that little or no spotting is called for upon the slide. This can be done, though it must be admitted that considerable practice is required.

It may be better to leave the slide alone, especially if the defect is in one of the more transparent parts of the subject. In the case of a pinhole in the shadows, care must be taken to spot the defect only, and not to touch surrounding parts of the subject. Actually, most photographers use too much pigment, and apply the brush too many times. All that is necessary is one or two, or at the most three, light touches with a nearly dry spotting-brush, so that the pigment matches in depth the silver image at that part of the slide.

For those photographers who are not very handy with the spotting-brush, excellent results may be obtained with a mapping-pen and diluted indian ink.

Light Corners.

A defect that is very prevalent in what are otherwise excellent slides, is allowing the edges of the slide to be lighter in depth than the surrounding image. In the case of slides made by reduction, this is the result of faulty adjustment of the illuminant. For the best pictorial effect it is preferable to have the corners slightly darker than the centre.

If only a part of the lantern plate is to be used, the picture should be central on the slide. In the case of a series of slides an unpleasing effect is produced if one picture appears on one side of the screen, and the next nearer the top, or at the bottom. This is a point that those who are making sets of lantern slides for a lecture, or for any other purpose where the pictures have to be shown in sequence, will do well to note.

Colour and Density.

The modern chloro-bromide lantern plate allows of slides being made in a pleasant warm-black tone, and these are very popular. There are also other plates that allow the production of a variety of colours ranging from warm black to purple or red, by increasing the exposure and developing in a solution restrained by bromide, or otherwise modified. This is a valuable power in the hands of the photographer who wishes to convey an effect of colour, such as red for a sunset scene.

At the same time, it is only fair to point out that these colours are sometimes obtained at the expense of photographic quality. Sepia or brown tones are inclined to be unpleasantly hot. In the matter of colour the only test is the appearance of the slide when projected. When introducing colour into a slide the photographer should aim at a delicate effect. Intense greens, blues or reds, however obtained, are often far from pleasing.

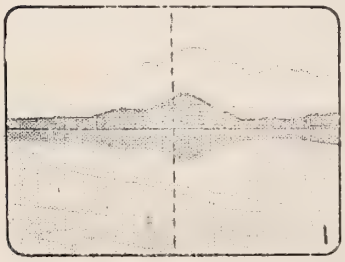
There are many slides that, while they are obviously from good negatives, fail either because they are too weak in contrast, or because they are too dense. Slides that have been over-exposed and are in consequence rushed out of the developer and into the fixing-bath in the hope of saving them will be both poor in colour and weak in contrast. Excessive density is almost as bad a fault.

The perfect lantern slide, in the case of a subject of normal contrasts, must have a very long scale of gradation. There must be a trace of silver image in the highest lights, but the shadow detail must remain transparent.

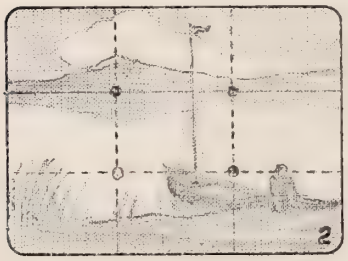
It is very difficult to convey in words the exact appearance of a well-made slide. If he can borrow a slide of really good quality the beginner will have the best possible guide to perfection. For a finished slide there is only one real test—that of projection through a lantern to see how it looks on the screen. But it is helpful to know that any slide that looks well in the hand will project successfully. Many of the best slide-makers, in fact, derive as much pleasure from viewing their slides in the hand as upon the screen.

Some Minor Points.

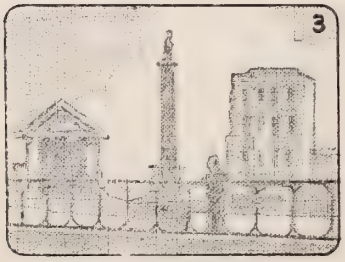
Care must be taken that the slide is clean. By this is meant that it must not only be free from particles of dust and other such obvious dirt, but that it must not have on it any deposit from the washing water. This, if allowed to dry upon the film, gives it an appearance of fine ground glass, especially noticeable in transparent parts of the subject. Gentle swabbing with cotton-wool after washing will remove the deposit, or in extreme cases the slides may be given thirty seconds in a solution of acetic acid of 2 per cent strength, followed by a final rinse.



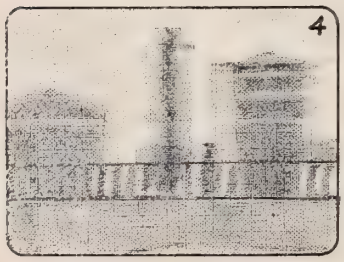
Care should also be taken to see that the cover-glasses are clean.



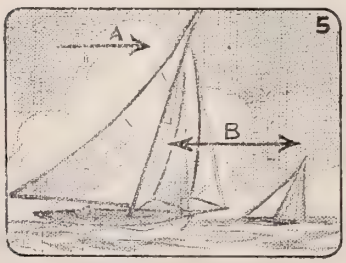
Masking the picture is important. The mask should suit the subject, and exercise the same function as the trimming knife on the print. Domes, circles, rounded corners, and all "fancy" openings should be avoided. All corners should be truly rectangular, careless masking detracts from the good effect of an otherwise satisfactory picture.



Picture Points for the Amateur Cinematographer



The beginner in ciné work will find that while it has much in common with the "still" camera as far as pictorial composition is concerned, there are several other points to be borne in mind. Some of these are indicated in the following notes.



by RICARDO

ONE of the first things that the beginner will learn about ciné camera technique is that the film frames or pictures cannot be trimmed like a "still" camera print.

If the camera is not held strictly vertical, and that means both the lens panel front and the side of the camera, everything that should be vertical, such as buildings, etc., and all horizontal objects, will be ultimately seen on the screen in sloping positions.

For this reason most ciné camera manufacturers engrave a horizontal and vertical line somewhere on the view-finder so that the view seen can be checked off square with the camera.

Avoid as much as possible filming distant views like that in Fig. 1. The horizon runs across the centre of the frame and the main object of interest is also in the centre. As with still camera practice, try and place the point of interest on *one* of the "thirds" as suggested by the black spots in Fig. 2. Notice, too, the great improvement made by including a foreground.

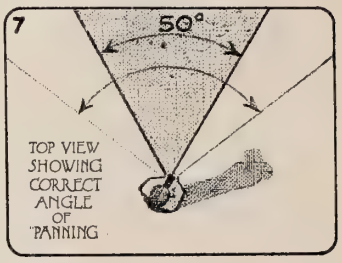
The alternative for such still scenes is to move the *camera* in a horizontal direction, otherwise known as "panning." In doing this, observe that the camera must be moved very slowly. Where there are many vertical objects in the field of view, like those in Fig. 3, the panning movement must be very slow, otherwise something like the fuzziness in Fig. 4 will be seen instead of a sharp contour to each.

The film transport speed must be quicker for quick "pans." It is sometimes better to make several still shots than to "pan" the camera for such subjects.

Another fault that the beginner is prone to make when "panning," and that is swinging the camera to and fro, i.e., from left to right, too many times.

Once or twice is enough for most subjects, and if this is exceeded the ultimate effect will be to make everybody in the audience jerk their heads from side to side in order to follow the subject.

With moving subjects like those in Fig. 5 it is much better to position them for a three-quarter front view and then follow them in one direction, "A," until a back three-quarter view is seen. Don't reciprocate, like "B," from one to the other. If one is also on a moving object such as a boat, every effort must be made to keep the camera as near as possible horizontal.



When shooting a moving subject like the player in Fig. 6 it is a wise plan to keep him a little to one side of the centre as shown, as this will give him plenty of "space" in front and look better. Follow the figure and not the ball, and again, move in one direction, and should a return shot be required, allow a pause in the camera before returning.

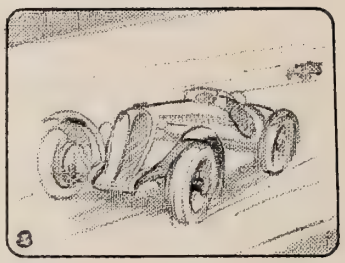


Fig. 7 shows the angle of a "pan" shot. If an arc of 50 degrees or so is exceeded, not only does the perspective look odd, but the entire shot looks rather monotonous. When filming fast objects such as Fig. 8, take up a three-quarter front view position when in the distance and hold them until they are gone again and should they appear like Fig. 4 while broadside on, cut this portion out of the film before projection.

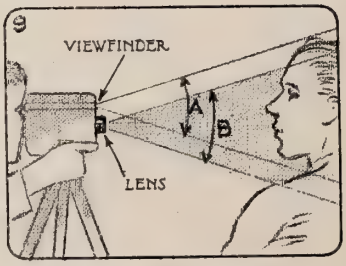

Fig. 9 explains the meaning of parallax. With some of the older types of cameras where the view-finder is some distance away from the lens, there is the danger of missing the top margin when filming close subjects.

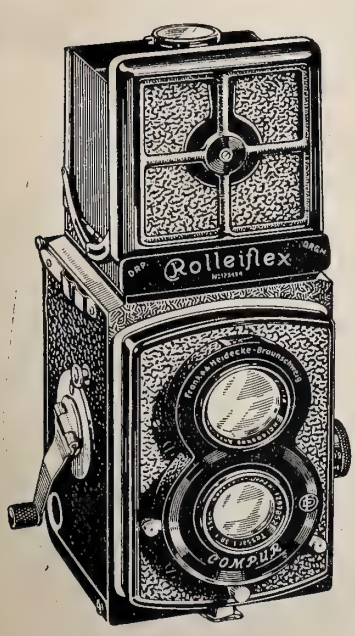
Figs. 10 and 11 illustrate how near objects, especially when they can be placed near two or more edges of the picture, provide an interesting support or frame.

Rolleiflex does it again



By permission of the "Daily Herald."

THIS ROLLEIFLEX SNAPSHOT **WINS £3,000**

The 1st prize winning picture taken by Mr. Fred H. Done, of Northwich, Cheshire, with his ROLLEIFLEX camera

FOR THE SECOND YEAR RUNNING A ROLLEIFLEX USER WINS THE "DAILY HERALD" BIG PRIZE

THIS YEAR £3,000 (£2,500 with an additional £500 for being a Registered *Daily Herald* reader). **LAST YEAR, £2,500** first prize won by Mr. R. Jenkins with his Rolleiflex. The competition was open to any amateur, no matter what his camera, so the Rolleiflex beats all comers. To carry off the biggest prize in photographic competitions two years in succession is surely a record unparalleled in photographic history. No wonder the photographic trade is agog with this astounding news.

There is no doubt that the unique design and the marvellous versatility of the Rolleiflex enabled both Mr. Done, this year, and Mr. Jenkins, last year, to pull off these big prizes. They watched their subjects right way up in actual size on the focussing screen, and snapped at exactly the right moment. Focussing, lens stop, shutter speed can all be instantly adjusted while watching the picture.

And yet the Rolleiflex is only a medium-priced camera. It has a one-lever Compur shutter speeded to 1/500th sec., T. and B., a Zeiss Tessar f/3.5 lens and takes 12 pictures on 3¼×2¼ 8-exposure roll film for a 1/-. As equally suited to winter photography as summer snapshots. And it costs **£25.** A large range of accessories include plate adapter, ciné. film attachment, stereo attachment, Proxar lenses, etc.

TELEPHONE: VICTORIA 5482 AND 5483 TELEPHONE: CITY 5482

An Electric Signalling Device for the Lecturer

WHEN delivering a lantern lecture it is essential for the lecturer to keep in touch with the lanternist so that he may know when to change the slides. An audible signal of any kind is liable to be distracting; this leaves us with no alternative but the electric "flasher."

The device shown in the sketch is quite suitable for this purpose, and very efficient when in use. It consists of a box, A; battery, B; terminals, C; battery tester or terminal strip, D; flashlamp bulb, E; switch, F; cover for bulb, G; a length of flex and pieces of thin covered wire.

The box to hold the battery is made of plywood, and all the necessary wood may be cut from an empty tea-chest. An Every Ready battery No. 126 was used, because of its large capacity, which enables it to last for several lectures before requiring replacement. Also it is fitted with terminals, which simplifies the wiring. The ordinary flashlamp battery can, of course, be used if desired, but in this case the holes will have to be made in the brass strips or the connections soldered.

The battery tester is a small gadget used by the electrician, and costs about twopence to buy. The bulb is 3.5 volts, and green in colour. A pear-shaped push switch is the best type for this purpose. The small cover is also of thin plywood, and is merely for the purpose of keeping the signal in the required direction.

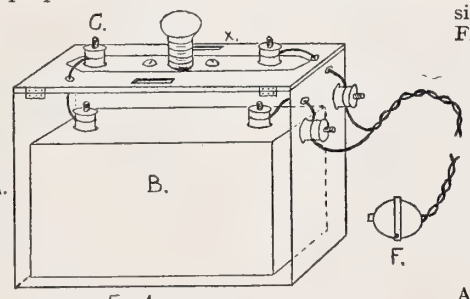

Fig. 1.

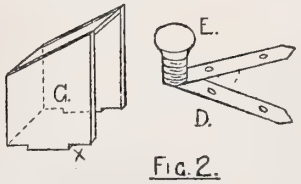

Fig. 2.

A glance at the sketch A, Fig. 1, will show how the box is constructed; it is convenient to hinge the top to the side. The cover G, shown in detail at Fig. 2, fits in the slots X, in the top.

Holes are made where shown in the battery tester, and terminals secured to this, which in turn is screwed to the top. Terminals are fastened to the front of the box and the battery inserted in position.

The wiring is shown by the thick black lines from the battery to the various terminals. Small holes will have to be made in the top and front to take the wires through. A length of flex is attached to the terminals in front, the cover fitted in position, and the device is complete.

The box is placed on the table near the lantern and the flex run along any convenient path to the lecturer. When the switch is pressed the small green light gives a pleasing signal, not brilliant, yet just sufficient to catch the eye of the lanternist.

J. STOBBS.

The Amateur Photographer and Cinematographer

Annual Lantern-Slide Competition, 1936

Readers are reminded that the latest date for receiving entries is Saturday, October 31st, 1936

Classes and Subjects.

CLASS I.—Landscape, with or without figures, sea subjects and river scenery.
CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.
CLASS III.—Architecture, interior and exterior.
CLASS IV.—Flowers, fruit and other "Still-Life" subjects.
CLASS V.—Natural History subjects.
CLASS VI.—Lantern slides in colour (not hand-coloured).
CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* Lantern-Slide Competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure 3¼ × 3¼ in., and must be properly spotted for showing in the lantern.

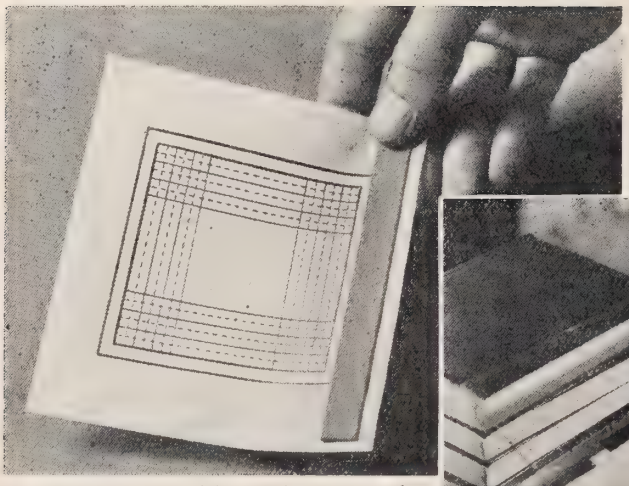
(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

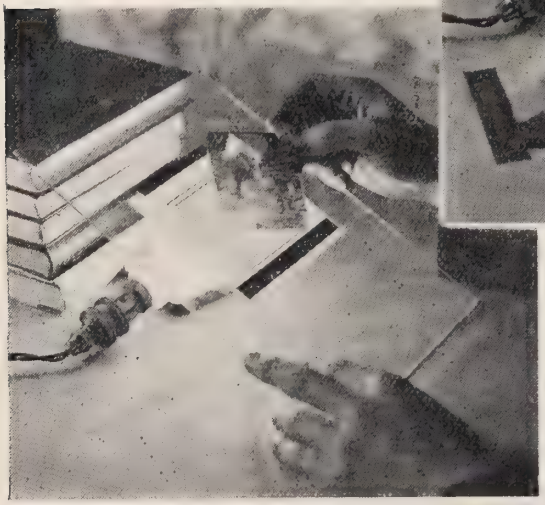


(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Saturday, October 31st. The slides must be well packed, and addressed "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

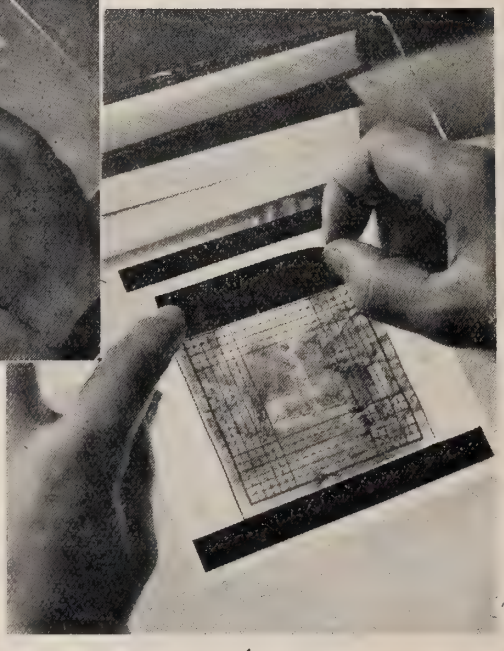
(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

FINISHING LAN



Masking, Spotting and Bindin

1.—*A gauge is a great help towards accuracy and neatness in slide-making. This one is quite simple to draw on a piece of tracing-paper. A strip of cardboard, on which to rest the slide while being masked, is gummed on as shown. Keep this quite parallel with the edge of the gauge.*



4.—*These spots of gum are sufficient to hold the first masking-strip securely when adjusted in position and gently rubbed down. The other three sides are then masked in rapid succession. The value of the gauge will be appreciated during this operation as it enables the exact amount of picture that is required to be seen. It also serves as a guide for straightness of the masking strips and for ensuring right-angled corners. This method of masking enables one to complete the composition of the actual picture to a nicety. At the same time, the back of the slide looks neat as well as the front, because the spots of gum are hidden in the final binding.*

2.—*By attaching the gauge temporarily to a sheet of glass we have an ideal masking desk. The lines on the gauge ensure regular and perfect masking, and both hands are free for the work. The glass is supported at an angle over an opal electric light bulb, as shown.*

3.—*For masking lantern slides cut up some thin black paper into strips $3\frac{1}{4}$ in. wide, and these again, in an ordinary print-trimmer, into smaller strips of various widths, each of which is then $3\frac{1}{8}$ in. long. A mask of any rectangular shape can be built up with these strips and is better than using cut-out masks of stock sizes. Three tiny spots of gum are dabbed along the top edge of the slide, before applying the masking strips.*

4.

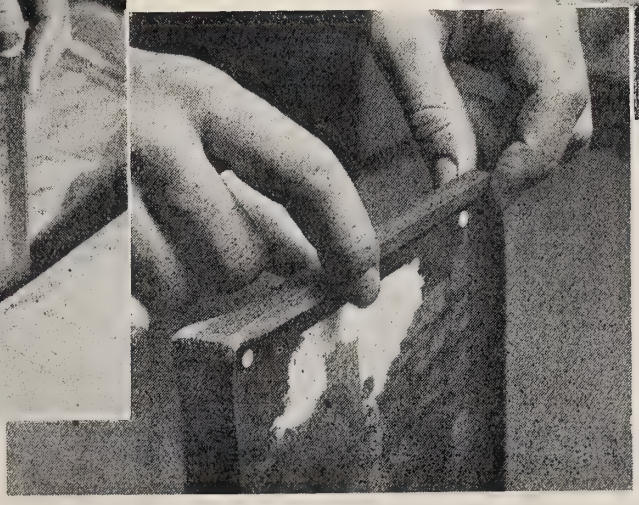
5.—*When all the slides are masked, the gummed places will be dry, and the surplus masking can be trimmed off with a sharp knife, on laying each slide face down on a clean piece of stiff flat cardboard.*

6.—*Then comes "Spotting." Two white spots are gummed and put on the mask, at the top of the picture. These are to indicate to the lanternist which way up the slide is to be put into the lantern carrier, without his having to examine each one as he takes it out of the box. A plentiful supply of spots can be made in a few seconds with an office letter-punch.*

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

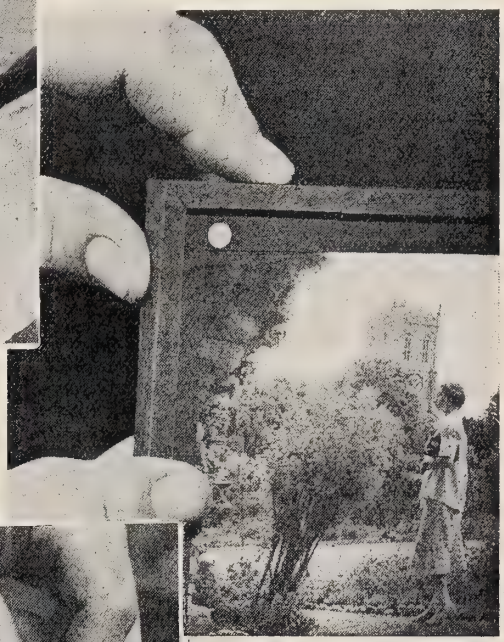
TERN SLIDES

By DAVID CHARLES.



7.—*Whether you prefer long or short binders, moisten them on a thin towel, or on blotting-paper. For this purpose apply gently either a soft damp sponge to the gummed side, as shown in the picture, or use a broad camel-hair brush that has been dipped in water. If there is any doubt about the binder sticking, a good plan is to apply thin gum instead of water to moisten it. Wetting the back of the binder first makes it nice and limp, and therefore easier to handle.*

8.—*Upon the moistened binder, gum side up, start the slide like this. Of course you have laid a cleaned cover-glass over the mask, and have dusted both inside surfaces with a dusting-brush! Have the slide parallel with the binder, and in its middle.*



9.—*Press the slide firmly, so that the binder commences to stick, and turn the slide on its corner, until the next side rests in the middle of the binding-strip. Then run a finger up the side, which has already begun to stick, to make it adhere firmly.*

10.—*Continue turning the slide, rubbing each edge in succession in good contact, and take care to make a neat overlap of the ends of the binder. Then squeeze down the projecting edges of binder along one side, like this.*

11.—*Next squeeze down the binder similarly on the* opposite side *of the slide. This operation forms "dog's ears" as you can see here. Pinch these to form neat mitres. A spot of gum can be applied to these little triangular corners to enable them to stick down better and make a good job of it.*

12.—*Then the remaining two sides are folded over and rubbed down. Notice the neatness of the corners produced by this method. The slide is now finished. It should be placed under a flat weight, and each successive slide put squarely beneath the pile. This helps to compress the corners. The glass on both sides should be thoroughly cleaned when the binders are quite dry. They will then neither move nor become fluffy from rubbing with a slightly damp rag. If the slides are to be given titles, these should be written legibly in white ink, either on the top part of the black mask, between the spots, before the cover glass is bound on, or they can be written on the top binding after the slide is completed. An alternative method is to write this title in black ink on a small strip of thin white paper and either stick it on the mask before bindir g or on the outside of the slide when finished. If a set of slides is being made for a lecture, they should be numbered consecutively after the order has been decided.*

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Three years ago we announced the formation of a new camera club at Norwood. It is now firmly established and decidedly flourishing. There are comfortable headquarters conveniently situated opposite the omnibus garage on Knight's Hill, West Norwood, and an interesting and comprehensive programme for the coming season has been arranged. There are vacancies for new members, and we are informed that "A.P." readers will receive a specially warm welcome. Full particulars and a copy of the syllabus can be obtained by sending an addressed envelope to Mr. A. W. Ketteridge, 10, Dodbrooke Road, S.E.27.

We have been advised of a change in Secretaryship of the Bournemouth Camera Club, which meets at the Town Hall, Bournemouth, every Monday. The new Secretary is Mr. John Reid, Westminster Hall, Beacon Road, Bournemouth, who will be pleased to hear from all keen amateur photographers in the district who are not members of a photographic society.

The Willesden Photographic Society has now commenced its winter session and extends a hearty welcome to all keen amateur photographers in the N.W. district of London, who should get into touch with the Secretary, Mr. E. E. Telfer, 14, Robson Avenue, Willesden, N.W.10.

Erdington is a thriving suburb of Birmingham, with over 10,000 inhabitants, and the Erdington and District Photographic Society invites the amateur photographers among them to join. Novices, as well as advanced workers, are welcome, and the society provides, free of charge, the use of a dark-room. Those who are interested should send for a programme to the Hon. Sec., Mr. H. C. Chamberlin, 36, Grange Road, Erdington, Birmingham, or attend for a "sample evening" on any Monday at 8 p.m. at the Church House rooms, High Street, Erdington.

On Saturday afternoon next, October 31st, the Southern Railway is organising a special ramble in the Bearstead district, and a photographic party, under the leadership of Mr. A. E. Daly, will be included. The train leaves Charing Cross at 1.45 p.m., and arrives back at 10.37 p.m. The return fare is 3s. After tea, a dance will be held at the Tudor House, but an alternative evening ramble will be arranged.

The October issue of the "Pathéscope Monthly" announces the new "Motocamera H," superseding the older Model "B." It is fitted with a fixed-focus T.T. & H. anastigmat of aperture f/2.5, and has a single-picture device. The October releases of 9.5-mm. film include two Charlie Chaplin comedies and two Mickey Mouse cartoons.

We have been asked to draw the attention of our readers to the "E.M.I. Camera Club," which has recently been inaugurated and is open to all employees of Electric and Musical Industries, Ltd., Hayes, Middlesex. Meetings are held fortnightly during the winter and monthly during the summer, and an interesting and comprehensive syllabus is being arranged.

The Bethnal Green Camera Club, which meets on Wednesdays and Fridays from 8 p.m. to 10 pm. at The Bethnal Green Men's Institute, 229, Bethnal Green Road, E.2, has now commenced its winter session. All readers of this paper living in the Bethnal Green district who are interested in the technical and artistic side of photography should get in touch with the Hon. Secretary, Mr. Frank W. Young, at the above address.

A Photographic Club has now been formed by the students and lecturers of the Camborne School of Metalliferous Mining. This Club proposes to hold its first exhibition in December, and a full programme for the session is being arranged. Amateur photographers living in the district who are interested should get in touch with the Hon. Secretary, Mr. Norman B. Connell, School of Mines, Camborne, Cornwall.

The latest winner of the Wallace Heaton Weekly Competition is Mr. L. Tyler, 92, Bishops Tachbrook, Leamington Spa, to whom an award of 21s. has been made. Readers will find full particulars regarding this competition in our advertisement pages.

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

MINIATURE CAMERA OUTFITS FOR SERIOUS MINIATURE PHOTOGRAPHERS

Most serious miniature photographers come to us to change their outfits. This is why we always have on hand a very large selection of used miniature cameras and accessories. In nine cases out of ten these second-hand cameras are indistinguishable from new, but by very reason of our large and quick turnover for miniature apparatus, we are able to offer them in every case at prices lower than those of similar outfits offered elsewhere. We invite prospective buyers to confirm the justice of this claim themselves by the simple process of comparison.

This week we have decided once more to increase the value for money of our second-hand miniature outfits so far as serious miniature enthusiasts are concerned. With the exception of Leicas, Contaxes and Rolleiflexes, we are including with practically every camera advertised a set of extra accessories, such as Filters and Proxars. That no charge whatever is being made for this may be ascertained by reference to our prices for similar cameras in our past advertisements. We merely wish to prove once more to the photographic public that in the case of miniature cameras, whether it is a question of buying, selling or exchanging, better service and better value is always obtainable by going to a specialist.

MINIATURE ENLARGERS

As miniature camera specialists, we have on view at our showroom the most complete selection of miniature enlargers to be seen anywhere. The accompanying illustration this week shows the fully automatic "FAM" enlarger, which is especially designed to enlarge all negatives up to 6×6 cm. in size. The "FAM" is adjusted to various heights merely by turning a porcelain wheel located on the side of the enlarger. It gives a maximum enlargement of 10 diameters on the 24×20 in. baseboard with which it is provided, and an absolutely unlimited enlargement merely by reversing the lamphouse and using the floor as an easel. It is provided with an extremely ingenious negative holder, permitting the negatives to be used in strip form without removal from the enlarger between each exposure. The optical system consists of a single condenser in conjunction with an f/4.5 anastigmat lens with iris diaphragm. An orange swing filter is provided and a complete set of masks for all negatives from Leica size up to 6×6 cm. A very similar non-automatic enlarger is available. This is the **Filmarex,** which apart from the necessity of focussing by hand, corresponds to the "FAM" in all other details. Prices:—

"FAM," 4×4.....£14 14 0
"FAM," 6×6.....£18 18 0
Filmarex, 4×4.....£9 13 6
Filmarex, 6×6.....£11 8 6

Another very interesting instrument we have just received is the Duplex Lumimax enlarger-projector. The Lumimax was primarily intended to take the lens of the Exakta camera. It is provided with a double condenser and takes negatives up to 6×6 cm. The most unusual feature of this enlarger is that the lamphouse may be swivelled round into a horizontal position, thus converting the instrument into a projector. Price, without lens, £10 10s. With f/4.5 lens, £13.

A GUARANTEE OF MECHANICAL AND OPTICAL PERFECTION ACCOMPANIES EACH OF THE FOLLOWING CAMERAS. IN SOME CASES SETS OF FILTERS OR PROXARS ARE INCLUDED WITH THE APPARATUS. NO EXTRA CHARGE HAS BEEN MADE FOR THIS AND NO DEDUCTION CAN THEREFORE BE MADE FROM THE PRICE OF THE CAMERA IF THESE ACCESSORIES ARE NOT REQUIRED. Please write for our new list of second-hand cameras and accessories, now ready.

CONTAXES:

Contax Model II, f/1.5 Sonnar lens. As new £52 10 0
Contax Model I, this year's camera, in new condition, f/2 Sonnar lens, wedge type range-finder £30 10 0
Contax Model I, latest slow-speeds shutter, f/2.8 Tessar. Practically as new.....£19 10 0
Contax Model I, latest slow-speeds shutter, f/3.5 Tessar. Practically as new.....£17 10 0
Zeiss 13.5-cm. f/4 Sonnar for Contax. As new £15 15 0
Zeiss 30-cm. f/8 Tele-Tessar for Contax, special filter, and case. Cost £48. As new.....£27 10 0
Megoflex Attachment for Contax, any model, £3 10 0
Plate Back for Model I Contax.....£2 10 0
Extra Slides, each.....5s. 6d.
Contax Magniphot Enlarger, latest improved type, fitted orange swing filter. Cost £11. As new £8 10 0

LEICAS:

Leica Model III, black, f/1.9 Dallmeyer Super-Six, ever-ready case. As new.....£26 10 0
Leica Model III, black, f/2 Summar lens, ever-ready case. Practically as new.....£29 17 6
Leica Model III, black, rigid f/2 Summar lens, ever-ready case. Practically as new.....£26 17 6
Leica Model III, black, f/3.5 Elmar lens, ever-ready case. Practically as new.....£23 15 0
Leica Model II, black, f/3.5 Elmar lens, ever-ready case. Excellent condition £18 10 0
Leica Model I, non-interchangeable, f/3.5 Elmar, case. Practically as new.....£8 17 6
Another as above, in good average condition £7 15 0
Leitz 5-cm. f/2 Summar, non-collapsible. New condition £10 10 0
Leitz 9-cm. f/2.2 Thambar, with special pigskin case. Cost £22 19s. As new.....£16 18 6
Leitz 9-cm. f/4 Elmar, coupled. As new....£8 15 0
Leitz 13.5-cm. f/4.5 Elmar, coupled. Excellent condition £11 10 0
Leitz 13.5-cm. f/4.5 Hektor, coupled. As new £13 15 0
18-cm. f/5.5 Tele-Megor, coupled for Leica. As new £17 10 0
Leica Stereo Viewer, as new, £4 15s. Leica Slow Speeds Attachment. As new.....£2 0 0
Orange Swing Filter for Valoy, 25s.; Waist-level Finder, 25s.; Angular Finder, chromium, latest type, 25s.; Soomp Lens Hood, 7s. 6d.; Front Lens, Elpro, 15s.; Elpet, 17s. 6d.
Leitz "Fylad" Enlarger, to take the Leica lens. Excellent condition £6 10 0

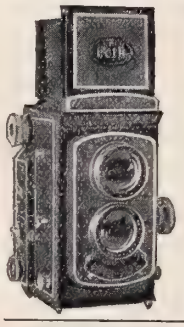
ROLLEIFLEXES:

Latest Automatic Rolleiflex, 6×6, f/3.5 Tessar, Rapid Compur, ever-ready case. As new....£19 17 6
Automatic Rolleiflex, 6×6, f/3.8 Tessar, ever-ready case. Practically new condition £15 15 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar lens, Rapid Compur, ever-ready case. As new....£20 10 0
Automatic Rolleiflex, 4×4, f/2.8 Tessar, case. As new £15 15 0
Rolleicord Model II, f/3.5 Triotar, case. As new £14 10 0
Rolleicord Model I, f/3.8 Triotar, case. As new £11 15 0

MISCELLANEOUS:

Latest type Super Ikonta Model II (8 or 16 on 3¼×2¼), f/3.8 Tessar lens, coupled film transport and shutter release, with green and red filters and ever-ready case. As new. Cost over £30.....£20 0 0

MISCELLANEOUS—contd.



Voigtlander Prominent (8 or 16 on 3¼×2¼), f/4.5 Heliar lens, coupled range-finder, built-in exposure meter, Focar lens, yellow filter, pigskin case. Cost over £21. As new.....£13 10 0
Voigtlander Superb, f/3.5 Heliar lens, set of Focars, green and yellow filters, ever-ready case. As new £14 10 0
Voigtlander Superb, f/3.5 Skopar, set of Focars, blue and green filters, case. As new.....£12 5 0
Welta Superfekta, f/2.8 Tessar, red and yellow filters. As new £18 15 0
Ikoflex I, f/4.5 Novar, Compur Rapid, yellow filter. As new £7 0 0
Miniature Marvel, f/2 Xenon lens, Rapid Compur shutter, green filter and Zeiss Proxar. As new £9 15 0
Noviflex, f/2.9 Trioplan, yellow/green filter, Proxar, case. Cost £17. As new.....£9 17 6
Mini-Fex, f/3.5 Astan lens, Compur shutter, filter, purse. As new.....£5 17 6
520 Zeiss Ikonta, f/3.5 Tessar, Rapid Compur, yellow and blue filters. As new.....£8 18 6
520 Zeiss Ikonta, f/3.5 Tessar, Compur, green and red filters £8 5 0
530 Zeiss Ikonta, f/4.5 Tessar, Compur, 2 filters. As new.....£7 7 6
520 Zeiss Ikonta, f/3.5 Novar, Compur, filter. As new £5 18 6
Kodak 620 Duo, f/3.5 Kodak lens, Compur shutter, yellow filter. As new.....£7 7 6
Baldax, f/3.5 Trioplan, Compur, Agfa sky filter. As new.....£5 15 0
Foth-Derby, f/3.5 lens, focal-plane shutter, filter. Excellent condition £3 12 6
Foth-Derby, f/2.5 lens, focal-plane shutter, filter. Excellent condition.....£5 5 0
Kodak Pupille, f/3.5 Elmar lens, Compur shutter, Proxar, filter. Good condition.....£9 9 0
Nagel Pupille, f/2 Xenon lens, Compur shutter, Proxar, green filter. Excellent condition £12 12 0
Nagel Pupille, f/3.5 Elmar lens, Compur shutter, 2 filters, special reflex attachment.....£12 12 0
Baby Ikonta, f/3.5 Tessar, Compur, set of three pan. ortho filters. As new.....£7 5 0
Zeiss Kolibri, f/3.5 Tessar, Compur, Proxar, filter, case. Excellent condition £6 17 6
Baldi, f/2.9 Trioplan, Compur shutter, filter. As new £5 15 0
Super Ikonta 530/2, f/4.5 Tessar, Compur, light red and graduated filter, ever-ready case....£13 18 6
Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, light and medium yellow filters, ever-ready case. As new.....£14 17 6
Super Ikonta 530/2, f/3.8 Tessar lens, Rapid Compur, 2 filters, ever-ready case. As new.....£18 17 6
Super Ikonta 530/16, f/2.8 Tessar, Compur shutter, 2 filters, ever-ready case.....£21 18 6
Super Nettel, f/2.8 Tessar, Proxar, filter, ever-ready case. As new.....£17 15 0
Ensign Autorange, f/4.5 Tessar, Compur, fitted specially to take plates, 3 slides and focussing screen, filter. Cost nearly £17. As new.....£10 10 0
Exakta Multispeed Model B, f/2.8 Tessar, graduated filter, Proxar, case. As new.....£21 10 0
Exakta Model B, f/1.9 Dallmeyer Super-Six, case. As new £25 15 0
Exakta Plate-back Model C, f/2.8 Tessar, 3 slides, focussing screen, filter, case. As new..£24 10 0
Exakta Lever-wind Model A, f/2.8 Tessar, filter, Proxar. As new £15 15 0
6-in. f/5.6 Dallon Telephoto for Exakta. As new £6 10 0

R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

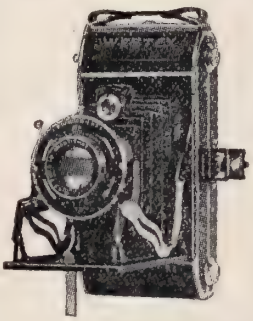
You cannot do Better—

. . and there can be no better reason for going to 'the Westminster' to buy a New or Second-hand Camera (Ciné or Still), or to EXCHANGE your present apparatus. If you desire to make your purchase on most convenient OUT-OF-INCOME terms, you will find that 'the Westminster' can offer you very special advantages.

FOTH-FLEX—with f/2.5 lens .

Marvellous Value
Splendid Offer

Twin-lens reflex taking 12 pictures 2¼×2¼ on normal 3¼×2¼ film. With f/2.5 Foth anastigmat, automatic film counter, focussing magnifier, focal-plane shutter, giving exposures 2 to 1/500th sec. and Time, with delayed-action movement.



Price only .. **£13:10:0**

Nine monthly payments of 31/6.

Also with f/3.5 Foth anastigmat, as above, at... **£10:7:6**

'WESTEX' Roll Film Cameras

Quite Unbeatable

"WESTEX Four-Five"

Takes 8 or 16 on normal 3¼×2¼ film. Very highest quality in every detail. Superb f/4.5 anastigmat, giving exceptionally fine definition, in focussing mount, delayed-action Prontor II shutter, 1 to 1/150th sec., T. and B. Sturdy all-metal body, plated edges, best leather covering and bellows. Quick self-erecting front. Optical direct-vision and brilliant waist-level finders. Hinged easy-loading back, panchromatic safety windows. Easy and delightful to handle, yet suitable for the most advanced work anywhere. By far the best all-round value offered. Obtainable only at the Westminster.

£4 : 8 : 9

Nine monthly payments of 10/5.

"The A.P." Monthly Competitions

AWARDS FOR SEPTEMBER.

THE entries in the competitions for September again showed an increase in numbers, particularly in the Beginners' class, which almost constituted a record. The quality, too, was extremely high in all sections. The awards are as follows:—

ADVANCED WORKERS' SECTION.

First Prize.—"Nature's Pattern," by Henry C. Stacy, 33, Poynders Road, Clapham Park, London, S.W.4.

Second Prize.—"The End of a Perfect Day," by William Jackson, 105, Park Grove, Hull.

Third Prize.—"The Summit Ridge," by J. F. Cutler, 52, Gibbs Green, Edgware, Middx.

Mounting Prize.—"The Morning Walk," by W. Ellison, 41, Moorhouse Road, Carlisle.

Certificates of Merit.—"Calling at Treib," by F. Annis Burrows, Enisan, Hill Rise, Chalfont St. Peter, Bucks; "Well! What's Funny About That?" by Arthur Keen, 328, Fourteenth Avenue East, Calgary, Alberta, Canada; "The Rolle Pass," by Hilda Jordan, Hildene, Tring, Herts.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3 respectively.

Those awarded Honourable Mention are as follows: Yahya Arif (Cairo); Geo. C. Backhouse (Leeds); (2) H. M. Bond (Woking); (2) G. W. Bott (S. Yardley, Birmingham); Hubert Brickwood (St. Ives, Hunts); J. H. Clark (London, S.E.); Arthur G. Dell (W. Norwood, London, S.E.); Cecil H. Diddams (Stockton-on-Tees); William Jackson (Hull); Hilda Jordan (Tring); Arthur Keen (Canada); G. E. Oakley (Acton, London, W.); (2) Mrs. K. M. Parsons (Reading); George A. Slight (Forest Hill, London, S.E.); George B. P. Sturrock (Glasgow); Denis Whitlock (Shortlands, Kent); Bingley Wilson (Rochdale).

INTERMEDIATE SECTION.

First Prize.—"Contemplation," by Lilian F. Thomas, 27, Robarts Road, Liverpool, 4.

Second Prize.—"The Castle on the Hill," by G. Warren Parrett, Corbière, Fitzmary Avenue, Margate, Kent.

Certificates of Merit.—"Water Lilies," by Major C. Banbury, Marden, Hertford, Herts; "The Old Serai, Istanbul," by Muhyeddin Arif Mardin, Türkiye Is Bankasi, Galata, Istanbul, Turkey; "Through Morning Mist," by Frank Price, South View, Chester-le-Street, Durham; "On the Leny," by Robert E Steven, 34, Cromarty Avenue, Newlands, Glasgow.

BEGINNERS' SECTION.

First Prize.—"Old Frankfurt," by E. V. Marchant, Rosedale, Iffley, Oxford.

Second Prize.—"Fair Weather," by T. M. Lennie, 9, Edenburst Avenue, Wallasey, Cheshire.

Certificates of Merit.—"Boats on the Shore," by G. Bramslev, 150, Gl. Kongevej, Copenhagen, Denmark; "Dusk at Looe," by Miss Vera Dawson, Lynton Cottage, Ilkley, Yorks; "George," by G. D. Hodkinson, 42, The Oval, Gloucester; "Suspicion," by A. J. Nasmyth, 35, West Drive, Heathfield Park, Handsworth, Birmingham, 20; "Take a Bite," by Mrs. M. Smith, 13, Market Place, Pickering, Yorks.

"My Winning Picture and How I took It"

A reader of *The Amateur Photographer* wins the *Daily Herald* £3,000 prize and describes here his methods of work.

By FRED H. DONE.

AT the age of fourteen I first became interested in pictures, but it was not until after two years' hard saving that I was able to buy myself a modest Kodak Brownie (folding camera) with R.R. lens. On the same day I purchased my first copy of "The A.P." My dark-room was the pantry, my red lamp a very unreliable oil lamp, and I still marvel at the results I obtained.

I passed through different stages, and during hard times my outfit dropped to a simple V.P.K., but it rose again to an f/4.5 outfit. This brought my first win of £10, which I invested in a reflex ($3\frac{1}{2} \times 2\frac{1}{2}$). As I won prizes I added to my outfit. For me it had to be an almost self-supporting hobby. Now I possess a Rolleiflex and a Kodak Recomar camera. With the latter I use Kodak Super Sensitive Cut Film and Kodak Super Sensitive Film for the Rolleiflex.

When processing my own negatives I use Kodak M.Q. concentrated developer, chiefly because I am used to it, but I am hoping to experiment with a fine-grain developer this winter which will eventually supersede it. In the summer I have little time and conveniences for dealing with roll films, and they are entrusted to Raines, of Ealing.

I use a Zeiss Magniphot enlarger, but unfortunately this only gives me 8×8 enlargements from the $2\frac{1}{4} \times 2\frac{1}{4}$ negatives.

My enlargements are made either on Kodak Nikko or Kodak Cream Fine Grain Royal. Apart from spotting, and shading during enlargement, my pictures are straight from the negative.

The exposure of my winning picture was 1/100th of a second at f/3.5. It was taken about four o'clock on the 29th August, on a very sunny afternoon. The negative was processed by Raines, of Ealing, and the twelve-inch square glossy enlargement they made from it showed not the slightest trace of grain. The negative is perfect. It was rather a haphazard shot, the children were thrown up and down by my friend (to his discomfort) and then the foremost child removed her hat and placed it on their father's head. This provided them with much amusement and produced their jolly expression (their winning smiles, I should say!). During this time I had to focus, keep them in the middle of the square format, and, most difficult of all, to see that the many wireless poles and chimneys didn't come into the picture. A remarkable feat, you will think. Well, you know the result.

I take my photography in an open-minded spirit. I tackle anything, but since the purchase of the Rolleiflex at the beginning of this year I have spent a lot of time on child photography. In this branch I act merely as photographer. I tell the parents what I want and then leave the stage to them whilst I am free to dodge round with the camera. In this way many unrehearsed and candid pictures are obtained.

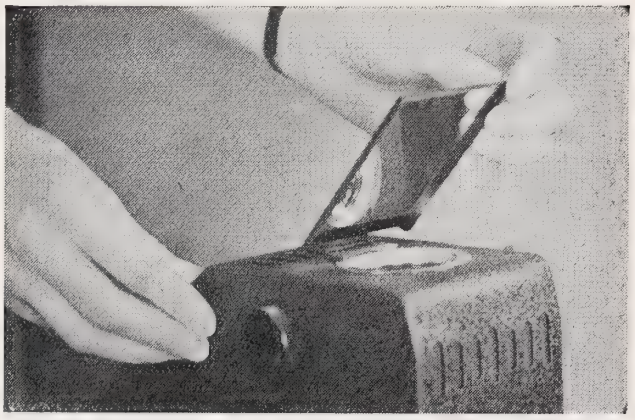
I would like to say that I have obtained a great deal of help from the pages of "The A.P.," and during the early stages of my photographic career I learned much from the free-lancing services run by Mallinson of Cambridge.

Although I feel greatly honoured with being awarded this big prize, the following telegram touched me more than anything. It was handed in at 8.14 Monday morning and runs as follows:

"Hearty congratulations beauty of picture removes persona regret. A Competitor."

This makes one proud to be a member of the camera-using fraternity.

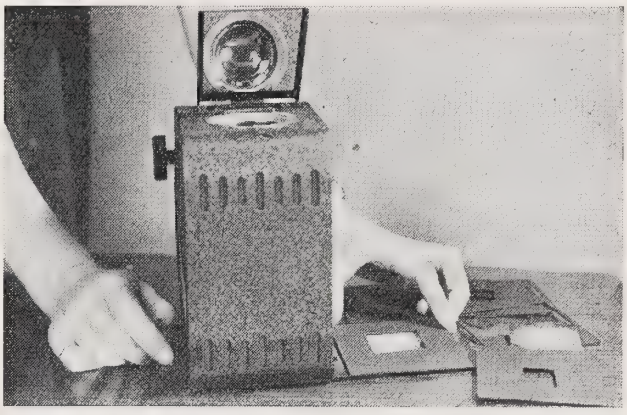
THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER



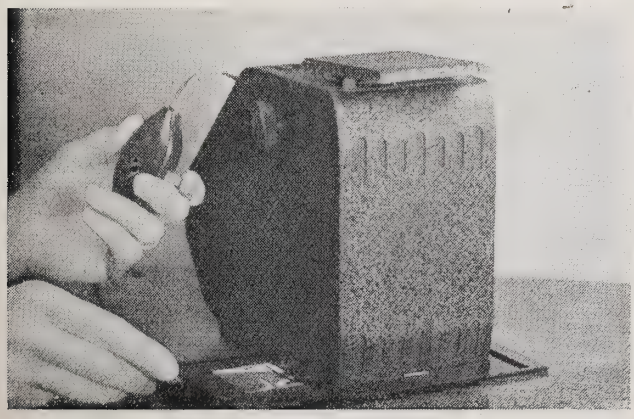
A Lantern *that* Projects Prints

By ***BERNARD ALFIERI, Jun.***

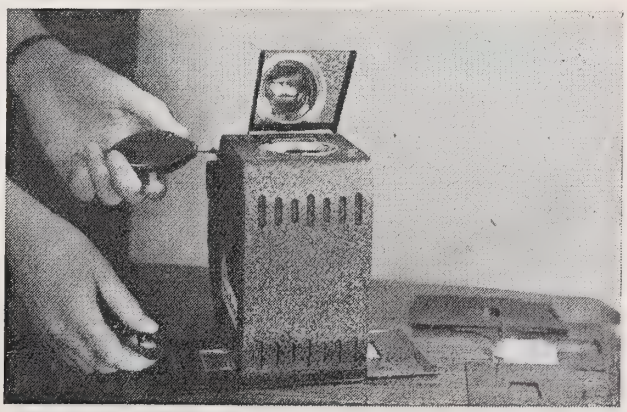
Projecting pictures on a screen during winter evenings can have an additional attraction if there are no lantern slides to prepare first, and small prints from the amateur's personal collection can be shown in a big size. The Episkop is a simple and cheap adaptation of the epidiascope, built to take prints up to 3¼ in. square. Although the brilliance of transmitted light cannot be obtained by reflection, this apparatus offers excellent projection from small prints on to a screen of about 4 to 5 feet square.



1.—*The bottom of the projector is hinged to allow the lamp to be placed in position. A 100-watt lamp with screw cap is used and can be supplied for the purpose in all voltages.*



4.—*The image of the picture is thrown forward on to the screen by means of a mirror at the top of the apparatus. This is adjusted to the correct angle to get the best result, and focussing is effected by the knob at the side.*



2.—*With the apparatus upright and pointing at the screen, a print is placed in a metal carrier, which is held down by a metal mask, and inserted in grooves provided underneath.*

5.—*The carrier pushes through to the other side, allowing the next picture to be arranged while the first is being shown. A selection of different masks allow prints of varying sizes to be projected.*

3.—*The print in the carrier is pushed into position and the light is then switched on.*

6.—*The switch is conveniently placed to allow the lamp to be controlled while the pictures are being changed.*

"The A.P." Monthly Competitions

PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.

FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon (see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the October competition is Saturday, October 31st, and for the November competition, Monday, November 30th.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection when completed will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

45. LANTERN SLIDES BY CONTACT

IN addition to lantern plates, developing and fixing solutions, and dishes of suitable size, lantern-slide making by contact requires the use of a printing frame. This should be of quarter-plate size (4¼×3¼ in.) which will enable a quarter-plate or smaller negative to be printed on the 3¼-in. square lantern plate.

If printing is to be done from a smaller negative, it is desirable to make a simple mask to hold the film or plate in the centre of the frame. In the case of a film, the mask can be cut from black paper and may have mounting corners into which the film can be slipped to prevent it from moving away from the opening.

For plate negatives a card surround is better, but care should be taken that the card is no thicker than the plate, or the lantern plate may bed down on the carrier instead of the negative, so leading to unsharp slides.

Before starting to print it is desirable to sort the negatives into groups under the classification "Thin," "Medium," "Dense," and "Very Dense," to facilitate estimation of exposure.

Lantern plates fall into three distinct classes according to their speed. These correspond roughly with bromide, chloro-bromide and gaslight papers, and are handled in the dark-room in much the same way.

When exposing the lantern plate behind the negative in the printing frame the distance of the frame from the light, preferably an opal electric bulb, should be carefully fixed so that exact duplicate exposures can be made. For fast lantern plates a 25-watt bulb may be tried at a distance of two to four feet, this distance being shortened to 2 ft., or even 18 in. for plates of chloro-bromide speed. For plates of the gaslight type, for which a dark-room is not required, exposure at 8 in. from a 60-watt bulb is suggested.

Test exposures should be made in the way familiar in printing on paper; to avoid waste a lantern plate may be cut into four test strips (in a safe light) by means of a wheel cutter.

After exposure the lantern plate is developed—preferably in a developer recommended by the makers—fixed in an acid fixing bath, washed, and dried. It must then be protected from damage by a cover-glass, which is placed over the film side and bound round the edge of the slide by ready-cut gummed binding-strips. Masking, if this is required, is done before binding by gumming strips of black paper on the surface either of slide or cover-glass.

Holding the slide so that the picture is correctly seen, a white spot is gummed to each of the two top corners to enable the lanternist to insert it correctly in the lantern.

46. DEVELOPERS FOR LANTERN SLIDES

"BLACK TONE" PLATES.

ANY full-strength M.Q. developer, as used for bromide prints, will give good black tones on these plates, or the following may be used :—

Hydroquinone	80 grs.	(9 grm.)
Sodium sulphite (cryst.)	1 oz.	(100 grm.)
Potassium hydrate	80 grs.	(9 grm.)
Potassium bromide	10 grs.	(1.5 grm.)
Water so make	20 oz.	(1,000 c.c.)

Warm tones can be obtained on "black tone" lantern plates by increasing the exposure up to five times normal and using an M.Q. developer containing a large proportion of bromide.

"WARM TONE" PLATES.

The following pyro formula, due to H. W. Bennett, is recommended :—

A. Pyro	100 grs.	(23 grm.)
Sodium sulphite (cryst.)	800 grs.	(183 grm.)
Citric acid	50 grs.	(11.5 grm.)
Water to make	10 oz.	(1,000 c.c.)
B. Sodium carbonate (cryst.)	800 grs.	(183 grm.)
Water to make	10 oz.	(1,000 c.c.)
C. Potassium bromide	100 grs.	(23 grm.)
Water to make	10 oz.	(1,000 c.c.)

For normal development take 1 part A, 1 part B, 2 parts water; for still warmer tones take 1 part A, 1 part B, 1 part C, 1 part water.

Lantern slides on development are fixed, washed and dried in the same manner as glass negatives.

Lantern slides may be toned in the sulphide toner or any other toning bath as recommended for bromide prints. A fine brown colour can also be obtained by bleaching in mercuric chloride solution as used for intensification and exposing to bright daylight.

PLEASE GIVE GENEROUSLY NOV. 11 REMEMBRANCE DAY

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLVII.

Miss MERLYN SEVERN.

From information communicated to our Special Representative.

"I AM a miniaturist born—photographically speaking—and bred. To my mind, the camera is a kind of third eye—a mechanical eye recording the impressions that the physical eye finds interesting or beautiful. It should therefore approximate as closely as possible to the eye's method of working: it must combine the utmost portability and convenience in operation with a lens of very wide aperture.

"Against these advantages must be set the care necessary in processing the tiny negatives if large prints of exhibition quality are to be produced from them; but I for one find the technique of miniature work fascinating.

"When the opportunity arose to take some photographs of the Russian Ballet I had just become possessed of a Contax II, and I found it an ideal camera for the job; the combined range-finder and view-finder, and the remarkable definition given by the f/1.5 Sonnar lens, were especially valuable.

"In work of this kind very fast panchromatic material is, of course, necessary, for exposures must be kept to the minimum and the lighting is often inadequate. I use Agfa ISS film, developed in paraphenylene-diamine and glycin—the well-known Sease III formula. I aim at a very thin negative—what a photographer of the old school would probably describe as 'a mere ghost'—with the double purpose of keeping the grain fine and reducing the time of exposure in the enlarger.

"This last point is a very important one, I think, for workers living in a large town. The vibration from passing traffic may not be consciously felt, but experiment will prove that it affects the enlarger, particularly when the head is at the top of the upright; if a prolonged exposure is given, definition is bound to suffer. The degree of enlargement involved in making a 20×16 in. print from a 1½×1 in. negative is so great that no liberties can be taken in this respect.

"For exhibition prints I generally use Kodak Royal paper, and develop it with amidol (the standard formula). Pictures taken at night nearly always have comparatively large areas of dark tone, and good rich blacks are accordingly very important. They can only be obtained by full development. Before making the final print I make sure, by means of test pieces, that the exposure contemplated will allow of *at least* three minutes in the developer. The print is then rinsed, given ten minutes in each of two acid fixing baths, and well washed. When it is dry I go over it carefully, filling in with water-colour mixed with a trace of gum any white specks due to dust on the negative; the final test is to pin it up on a wall and see how it looks.

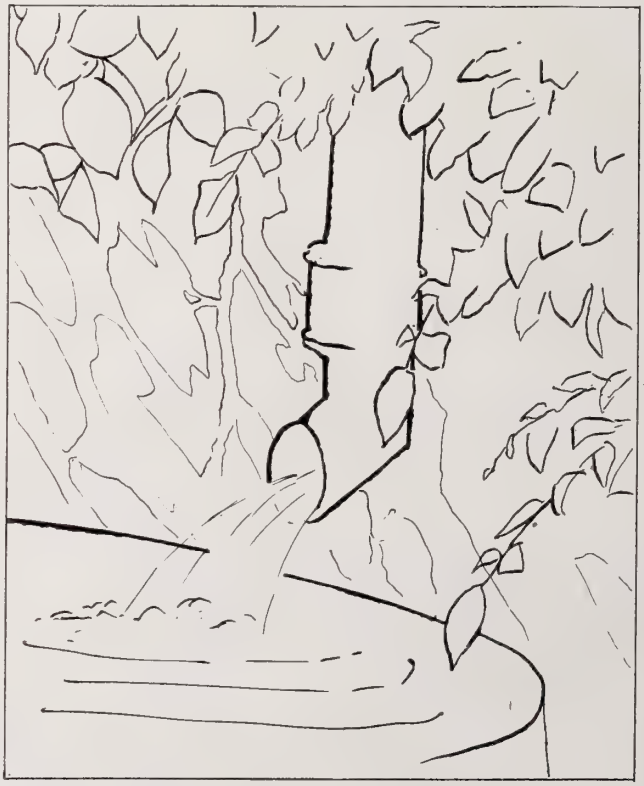
"To would-be exhibitors I should like to repeat the advice so often given in these pages: *join a club.* Photographers are the most friendly people in the world, and whenever you come up against some little difficulty you are sure to find that a more experienced member is both able and willing to help you."

(*A further example of Miss Severn's work is reproduced on one of the centre Art pages.*)

THE DARK AND THE PALE SWAN. *Merlyn Severn.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.



"WATER BUTT," *by W. G. Briggs.*

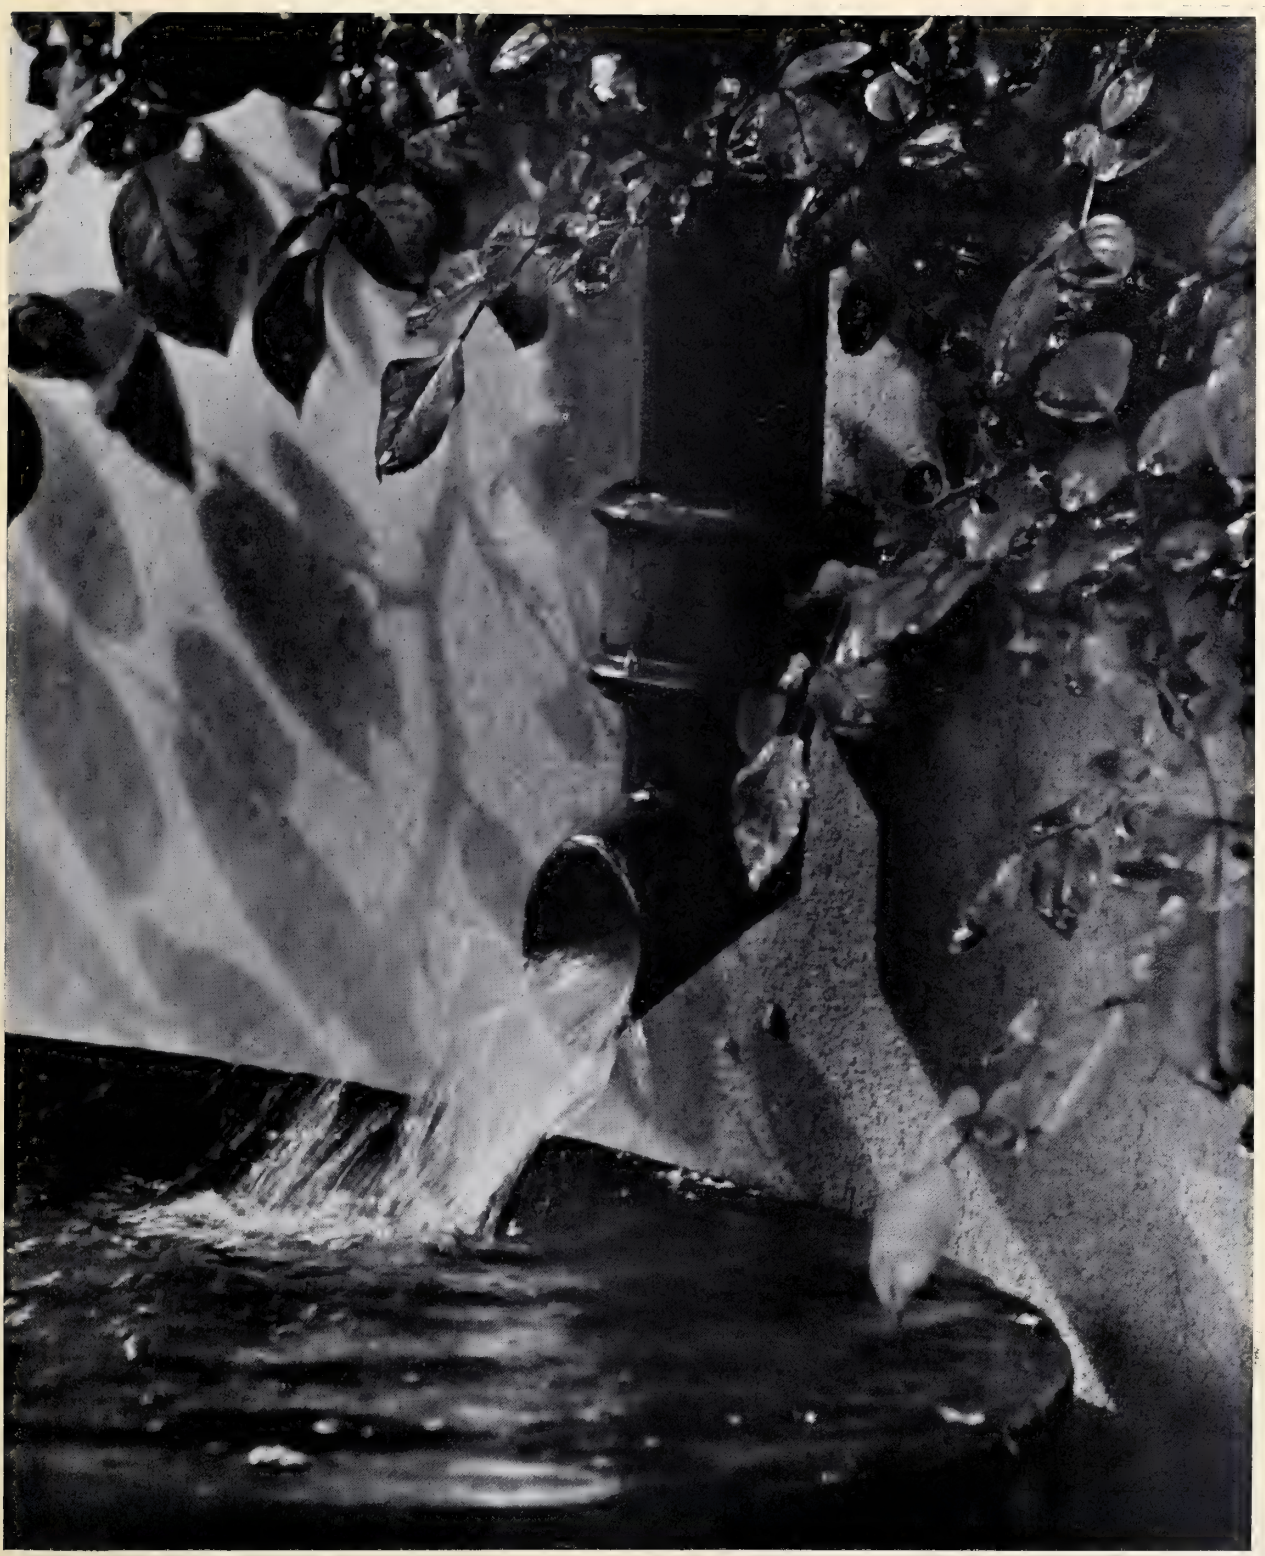
IT might be thought, perhaps, that the subject matter of this picture is somewhat slight, and, to those who habitually think in terms of landscape in the grand manner, or other types of subject of imposing scale, it would, no doubt, appear to be rather inadequate, but it must be admitted that the motive is finely expressed and the subject complete in itself, while works of more grandiose intention frequently fail to achieve their object and only succeed in attaining the commonplace.

The effect of sunshine and shadow which provides the motive is clearly in evidence; there is a further attraction in the more than a hint of decorative pattern; the feeling of light on the splashing water is beautifully conveyed; there is a nice suggestion of texture in the way the surface of the wall is rendered; and, from the technical standpoint, the quality of the print is first-rate.

In fact, judging from the print, the negative is one of that particularly excellent quality that is required for the making of a lantern slide. There is a richness and transparency in the shadows and a brilliancy and sparkle in the lights that would show up extremely well when projected upon a screen, either if the slide were developed to a warm-black tone or if the blue-grey of thiocarbamide were employed. As far as a print can do, it illustrates the qualities needed for a slide, to the production of which this number is specially devoted. It also has reference to work with the ciné camera, and, in this connection again, the subject and its presentation is suggestive of a very good "still" or "close-up" illustrative of such a theme as "Sunshine and Rain."

As far as the arrangement is concerned, it seems very well designed and complete. The centre of interest lies in the patch of light where the water splashes from the spout. It attracts the attention, in the first instance, because of its brilliance—it is the brightest note in the whole thing—and, in the second, because it is indicative of motion in a scheme that is otherwise perfectly static. Its brightness is enhanced by its proximity to the intense dark of the water spout, which is about the deepest tone in the picture, and, on account of the concentration of interest afforded by the contrast of extremes in conjunction, its priority is unquestionably established. In placing, it is true, the splash of light approaches very near the vertical centre line, but it is somewhat to the left, and the presence of the spout, from which it emerges, and its shadow, which extends right up to the right-hand edge, seem to create the illusion that it is placed more to the left than it actually is.

At all events, it is forceful enough, and the unequal treatment of the spaces on each side quite effectively prevents any suggestion of formality or symmetricality.



Along the top there is an irregular strip of foliage, the leaves of which, in the main, take up a direction falling from the right towards the left. The sense of direction so imparted is countered and opposed by the line taken by their shadows, which falls downwards from left to right. This line, again, is opposed by the direction assumed by the splash of water as well as by the vertical line of the upper portion of the spout, while, at the base, the main tendency is inclined to the horizontal. The latter impression helps to convey a feeling of stability, and the upper portion, with its line and counter line, creates a sense of pattern or design of a decorative nature.

This, viewed in conjunction with the power with which the centre of interest is put forward, endows the composition with a high sense of order, and much of the feeling of completeness that the work so strongly exhibits arises from this happy state of affairs. The feeling, incidentally, is stressed by the darkening of tone towards each of the four corners, a device which tends to throw the attraction towards the central section.

It is all very well done and brings us to the conclusion that, in choice of subject, it is better to try and deal with a scene of limited scope, in which everything can be satisfactorily adjusted, and in connection with which the camera seems peculiarly adapted for handling, than to endeavour to cope with—for example—wide expanses of landscape or town subjects embracing impressive and magnificent buildings, which rarely "make up" in a satisfactory way, and which have to be thoroughly well done if they are to be at all successful.

But it is by learning to handle the small subject successfully that the capacity to treat the big one, when it comes along, is acquired, so that the ability to deal with small subjects of this type should be carefully cultivated.

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IT is by no means easy to convey an idea of the qualities needed for a transparency or lantern slide by a print, however good it may be, for, in the first place, the print is assessed by the light it reflects and the slide by the light it passes. Still, there is one quality, common to most of the prints reproduced on the opposite page, which is essential in the making of lantern slides, and that is a clean brightness of technique.

Sparkling Brightness.

In a print, it may not matter very greatly if a portion of the heaviest shadow tone is overprinted provided there is sufficient gradation adjacent to prevent a feeling of choking up, but, in a slide, opacity is a thing that must be avoided, and even in the deepest tone it is needful that a modicum of light be passed.

The lights must, of course, be free from any suspicion of fog, and, in the brightest passages, should display an appreciable amount of tone whilst retaining all the most subtle distinctions of the negative. Tonal quality must be preserved throughout; the way in which the image is defined should be clear cut, and diffusion must be carefully avoided; pinholes and spots, because of their proneness to destroy evenness of tone, ought to be entirely removed; and the printing exposure and time of development of the slide should be so determined that the colour of the image is acceptable.

As far as its tonal qualities are concerned, No. 2 of the prints on the opposite page—"The Keep," by J. Burgess—provides a good idea of what is required in a slide. It may be that a little more tone in the upper reaches of the sky would not come amiss, for it would show up the tops of the clouds to better effect, but, apart from this, the remainder of the print shows that decision of tone and clear-cut brightness of image that goes far towards the making of a good transparency.

Decision of Tone.

Reference to the print discloses a marked distinction between the portions in sunlight and those in shadow. When thrown on a screen at the immense magnification afforded by the lantern, the feeling of brightness at present evident in the sunlit areas would be appreciably intensified and the whole thing would seem full of sparkle and brilliance.

The definition seems to be good, as it has to be to stand the considerable enlargement to which a slide is subjected, and, altogether, the technical standard reaches a very high level. It seems pretty evident that the exposure was adequate, and that the time of development of the negative was correctly calculated having regard to the paper upon which it is printed. It is quite possible to obtain a lantern plate of equivalent contrast range, and, if this be done, there does not appear to be any reason why a slide, equal in all respects to the print, should not be produced.

The composition, too, seems well designed, the keep forming a good and well-placed centre of interest, and, with a fraction—say about a quarter of an inch—removed from the left, would make up well and not need any further adjustment.

Design and Arrangement.

It is in this respect—design and arrangement—that No. 1, "Guy's Cliff," by B. Foster, does not do so well. For one thing, the picture is too nearly divided horizontally into halves, both water and sky occupying almost equal proportions, and, for another, the tree on the right scarcely fits into the scheme at all satisfactorily.

Without it, there might be some suggestion of a design on the lines of a frieze, but, even then, either the sky or the landscape should predominate—preferably the former, although, at present, a considerably greater degree of tone towards the top seems required. Assuming this could be arranged—and it could by local extra printing—the subject would make up quite well as a slide. It might be wished, however, that the tones were a little more decisive, and that the slight suggestion of irradiation that causes the outlines of the trees to be lost to some extent, were avoided.

In this connection, it may be mentioned that backed plates or films of the anti-halo variety are very helpful in enabling this defect to be counteracted.

No. 3, "From Norbreck to Cleveleys," by C. Leigh, shows a simple subject, well and simply treated. It is in a comparatively high key, a method of rendering which, in a slide, could be matched by one of the delicate ranges of tone obtainable by means of the thiocarbamide process.

Contrast in Excess.

Nos. 4 and 5, "By the River," by K. M. Douglas, and "Die Saale," by Miss E. Plimmer, err on the side of excess of contrast, the lights being too bright and the darker tones too intense.

In a print, this unfortunate state of affairs can be corrected by the substitution of a softer grade of paper for that originally employed, and, in a slide, not only is the same expedient available, but it is also possible, by an adjustment of the times of exposure and development, to obtain a moderate degree of correction, i.e., if the "slow" variety of lantern plate is in use. With an increased exposure and curtailed development, however, the tone of the slide becomes warmer in colour, and, while the contrasts are somewhat reduced, the device cannot be carried too far or the colour becomes too "foxy" to be agreeable. It is also necessary for the bromide content of the developing mixture to be increased, the amount required being regulated by the degree by which development is cut down, but fuller data should be sought in one of the many textbooks on the subject.

Comparative Values.

It is in the skies, particularly, that the excessive contrast is felt, and the effect of that sudden brilliance in conjunction with the deep blacks elsewhere, coming, perhaps, after a series of more harmonious subjects, would, on a screen, prove to be something in the nature of a disagreeable shock which, at all costs, should be avoided.

A comparison with the sky of No. 2 immediately shows the need for an adjustment; but, in the remaining print, "Autumn Trees," by R. A. Graham, the difficulty is evaded by the simple expedient of excluding the sky altogether. It is quite an effective print and would also make a good slide.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

MAKING LANTERN SLIDES BY PROJECTION.

IT has been claimed that lantern slides should always be made by projecting the negative image on to the lantern plate, and not by contact. The reason given is that the glass surfaces are never perfectly flat, and that therefore contact is not uniform and definition suffers.

I have never been impressed by this reason. I am aware that the pull of the emulsion will curve glass, and the larger the plate the greater the curvature; but in slide-making the surfaces concerned are only 3¼ in. square, and one of them is more likely than not a thin film easily pressed into perfect contact.

At the same time, there are several other reasons for preferring projection printing. One is that in contact printing it is difficult to keep a loose film negative in position, and a mask to hold it will prevent perfect contact. Another, and far more important reason, is that the negative image can be printed the same size, larger or smaller. Years ago the method was generally described as printing by reduction, because most negatives were larger than lantern plates; now it is likely that the negative image, or part of it, will be enlarged to make it of adequate size on the slide.

I propose first to describe the set-up of apparatus shown in Fig. 1, and then to show how the principles involved can be modified. In passing, I may explain that I do not use a gorgeous table-cloth. The one shown is a shabby old thing of a dingy brown colour with a raised pattern. The side lighting has emphasised the relief. I mention it because the result conveys a useful hint as to what often happens in other circumstances.

The enlarger is of the horizontal type, with a condenser, 60-watt lamp, revolving carrier, with swing and rise and fall as well as side-to-side adjustment, and long front extension. The quarter-plate camera is of the "field" variety, with all the usual movements, and again a long bellows extension.

Used for this purpose, the main function of the enlarger is to carry the negative, to illuminate it brightly and evenly by transmitted light, and to prevent light falling upon it from the front. As the negative occupies a fixed position close to the condenser it is only necessary to find once for all a position of the lamp that gives perfect illumination, and mark this position for future use. This is best done by putting a piece of ground glass instead of a negative in the carrier, and examining it through the lens opening. For this work the lens of the enlarger is not used at all.

It is the lens of the camera that does the work, and this work is simply to photograph the illuminated negative on to a lantern plate in the dark slide. As the camera is of quarter-plate size, all that is necessary is to put into one of the slides two ½-in. strips of card, between which the lantern plate will just fit.

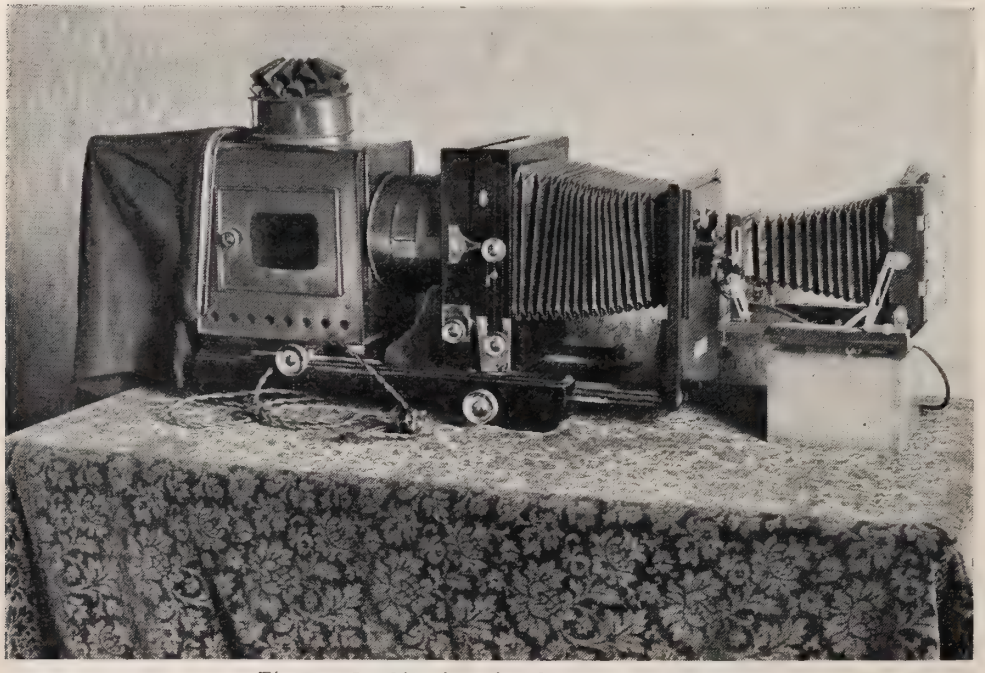

Fig. 1. Combination of Enlarger and Camera.

In the middle of the focussing screen a square of 3-in. sides is ruled on the ground glass with pencil, and in this square the image must be suitably placed and carefully focussed. This should be done at the largest aperture of the lens, which should then always be stopped down to the same aperture, so as to standardise another factor in exposure. The illumination of the negative is already standardised.

It will be seen that the camera is supported on a boxform stand, with one side missing so that the camera can be fixed by the usual tripod screw. The height of the box is such that the lens can peep through the lens opening of the enlarger, and the box and camera can be slid bodily backwards and forwards to vary the size of the image. Exposures are,

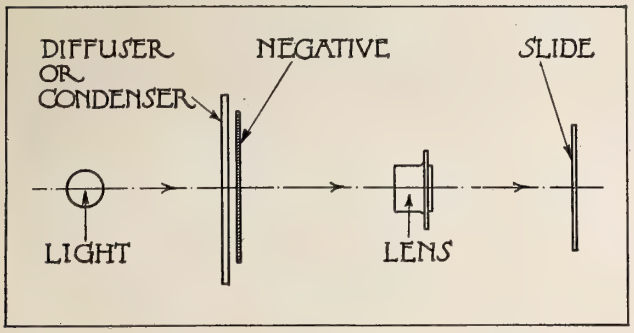

Fig. 2.

of course, made simply by switching the light on and off.

I hope I have made the general idea sufficiently clear, and will now show how the enlarger can be dispensed with, although it is obviously useful to anyone who has it. There is, in my opinion, no really satisfactory substitute for the camera. As I have often pointed out, a suitable camera of this type can be picked up at a very low price, and is of great utility also for copying or other purposes. It may be very simple in construction, but should certainly have long extension, especially if the slide is to be an enlargement of the negative. This means decreased distance from lens to negative, and increased distance from lens to lantern plate. In other cases less extension is needed.

Fig. 2, then, shows the fundamental principles. The light source may be of various kinds, electric light, gas, acetylene, spirit vapour, or even an oil lamp. Then in any convenient way the negative must be supported at such a distance from the light that bright and even illumination is assured. This may be achieved by a condenser or by a diffuser of ground or opal glass, the latter being practicable for small negatives.

The distances from negative to lens, and from lens to slide must be variable, and as I have said there is no simpler and more effective means of securing this than using a suitable camera. I do not regard a camera as suitable unless it has long bellows extension and a focussing screen.

Neither in the arrangement shown in Fig. 1 nor in any suitable modification of it is it necessary that the room shall be "dark." Focussing can be done with the aid of a focussing cloth, as in ordinary daylight work. But it *is* necessary to cover in the space between negative and lens so that no noticeable light shall fall on the front of the negative. The only light forming the image must be that passing *through* the negative.

Although I have suggested stopping the lens down to the same aperture after focussing, it may be as well to remind the beginner that its value will vary according to the extension. For example, if the slide is being made the same size as the negative, the extension will be double the focal length of the lens, so that f/11 becomes f/22, and this will increase the exposure four times. W. L. F. W.

LANTERN SLIDES by PROJECTION *with a VERTICAL ENLARGER*

In the foregoing article the production of lantern slides by projection has been dealt with for those workers who have a horizontal enlarger. A number of other workers, however, especially those who have miniature cameras, use a vertical enlarger. The following notes will help them to make use of this apparatus for the purpose.

NOT only are slides by projection generally (when well made) better in quality than slides by contact, but with the modern miniature cameras, contact slides have a picture area that is usually very small. This particularly applies to negatives made on 35-mm. film.

These negatives contain much fine detail, very suitable for lantern-slide purposes, and will enlarge to full lantern size (approximately 3 in. square). They will then give a much more pleasing and attractive picture on the screen than by projecting an image that was originally only 24 × 36 mm.

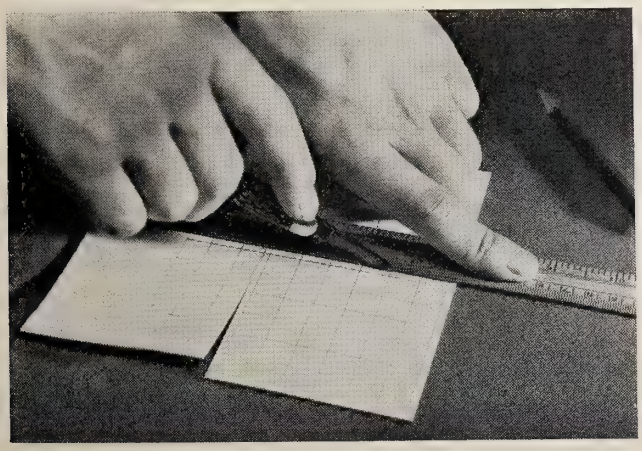

Fig. 1.

The modern vertical enlarger, particularly when constructed for use with miniature camera negatives, is ideal for the purpose, and excellent lantern slides can be produced with it if the following suggestions are carried out.

The enlarger illustrated is a typical model, but practically any other model on the market can be used equally well.

Fig. 2.

To compose the subjects with certainty (for one cannot *trim* a lantern slide) a little gadget is desirable for the purpose of registering the slide on the easel. Paste a piece of square-ruled paper (one penny from the nearest stationer's) on a piece of card. It may be as well to pencil up the inch and half-inch lines. When dry, cut this card accurately to the size of a cover-glass, namely $3\frac{1}{4}$ inches square. This is shown in Fig. 1.

Next, on another piece of cardboard, gum on two small strips of card, squarely with a cover-glass (Fig. 2). When these are dry, preparations are complete, and no slides will be spoilt by faulty centering.

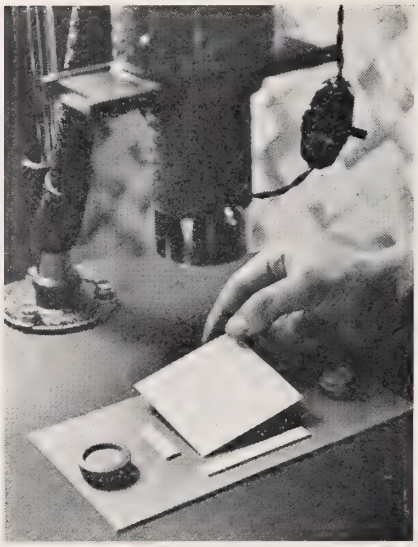

Fig. 3.

This gadget is just laid on the enlarging easel, with a "dummy" slide in place (Fig. 3). Weights on the larger card allow the whole to be slid about quite comfortably for composing and focussing the picture on the dummy, at the same time ensuring retention of correct position in subsequent operations.

To arrive at correct exposure it is not necessary to waste a number of lantern slides with trial exposures, although this is the plan frequently adopted by the beginner. The best method is to apply that used by the bromide printer and use strips for testing the exposures.

Fig. 4.

To get these strips one of the lantern plates from the box should be cut into four, as shown in Fig. 4. This is, of course, done in the orange or yellow light of the dark-room, and, if the lantern plate is laid face downwards on a firm pad, the strips can be cut quite easily by using an ordinary straight-edged ruler and a wheel cutter. Three straight, clean cuts should be given, and the plate is snapped into four pieces.

Each strip can then have two exposures made on it, as shown in Fig. 5. Cover half the strip with a piece of thin card for a short exposure. Remove the card and give "the same again." Then the first half will have double the exposure of the other half. (Note the "handle" to the card to prevent disturbing the test strip between exposures.)

After making a test exposure on one of the strips it should be developed in the developer normally used for the slides, and completely fixed and rinsed. It is then examined by transmitted light over a white surface, such as a white developing dish, or a piece of illuminated white paper, as shown in Fig. 6. The difference in the density will be clearly observed, and the correct exposure speedily arrived at.

When making the exposures in the enlarger a means of estimating seconds

Fig. 5.

is desirable. Lantern plates are slightly more rapid than many bromide papers, and it is frequently difficult to estimate accurately two or three seconds or less.

A far better way to regulate these short exposures is to hold the switch as shown in Fig. 7 and to give a succession of "snapshot" exposures by pushing the switch to and fro—click-click, click-click, click-click, and so on. Each of these movements will put on the light for about half a second. Exposures are then estimated as so many "clicks," and are easily repeated at any time.

Needless to say, when making exposures in this manner care should be taken that no vibration of any sort is

Fig. 6.

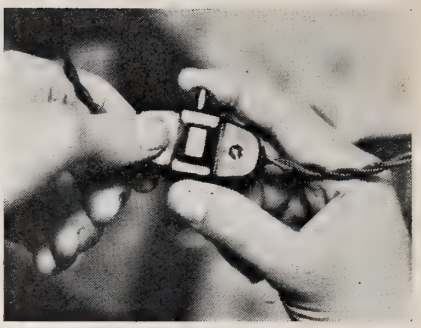

Fig. 7.

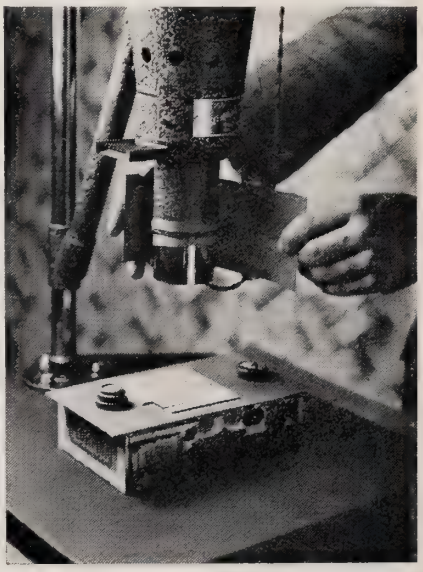
conveyed to the enlarger. The flex holding the switch should hang quite free and no strain should be put on it in any direction. If a much longer exposure is wanted for a particularly dense negative, or when using slow lantern plates, this method is not advocated. The light is, in that case, switched on and an exposure of the required duration given (which may be half a minute or more), and the light is then switched off.

Of course, there is a "catch" in making slides by projection. Many modern vertical enlargers permit of no degree of enlargement *less than* about 2 to $2\frac{1}{2}$ diameters, which is too much when enlarging from a small negative



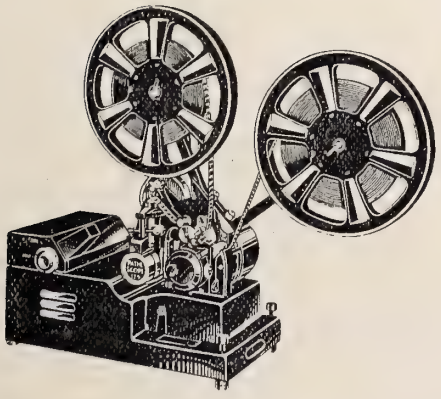


Fig. 8.

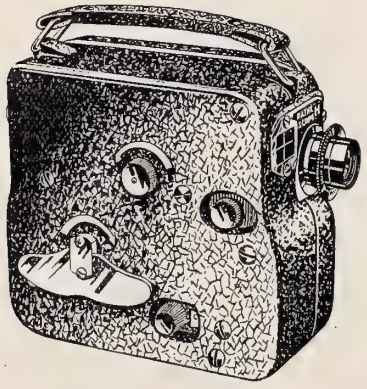
to about the $2\frac{3}{4}$ inches needed for a slide. But a little "wangling" will usually provide a solution of the problem. Note in Fig. 8 how the rubber bands are holding the lens farther from the film, how the box is raising the easel level; these are the essentials. Wrapping paper is also being placed round the extension, because the focussing-slot is open and lets light through when the lens is dropped like this. Focussing is done by moving the whole enlarger body. In any case it is essential that the entire outfit is rock-steady during the actual exposure.

D. C.

O.K. for SOUND



You simply plug into A.C. mains to obtain pictures 8 ft. wide, with marvellous sound reproduction from the full standard size width sound track of the

17.5-mm. Home Talkie — £60

Volume for the drawing-room, or, if desired, the village hall holding 500 people. A good selection of films is now available—and more in production—for hire or purchase outright at a fraction more than for silent films. Be O.K. for Sound with the finest Talkie.

O.K. for CAMERA

For making your own motion pictures with the utmost simplicity of operation, extremely low costs for continuous filming and **pin-sharp** pictures first and every time use the 9.5-mm.

Motocamera "H" — £6:6

Both Pathéscope Orthochromatic (R.O.F.) and Panchromatic (P.S.P.F.) films are now sold inclusive of the cost of processing, the former for 4s. 6d. and the latter for 5s. 6d. with the loan of the charger. There are over 1,000 single pictures in each reel of Pathéscope 9.5-mm. film.

DALLMEYER LENSES

"The Acknowledged Best the World Over"

FOR ENLARGING, SPECIFY A DALLMEYER ENLARGING LENS

F/4.5 Dallmeyer Best Quality Enlarging Lens.

Dallmeyer lenses specially designed for enlarging purposes, are manufactured in two series, covering practically all possible requirements.

Specially computed from the finest British optical glass, permitting their use for 1/1 to, say, 5/1. These lenses give definition in the enlargement comparable with that of the original small negative. This result is only possible by their unique correction for spherical aberration and colour, considering the type of material generally employed for enlarging.

The best series incorporate a hinged ruby cap, clicking iris for determining the stop to be used in the dark, and superb definition from corner to corner.

Prices and Particulars :

Code Name.	Focal Length		Plate Size.	Extra Flange.			Price.
				Price.	Diameter.		
	in.	mm.		s. d.	in.	mm.	£ s. d.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Preparing for the Projection Season

By HAROLD B. ABBOTT.

MUCH has been written on the subject of giving a home cinema show, and there can be no doubt that many amateurs fail to give sufficient attention to the details which make for the comfort and enjoyment of patrons of the drawing-room (or should I say " lounge " ?) cinema.

Most writers stress the necessity for correct placing of seats in relation to projector and screen ; the necessity for draughtless ventilation, a comfortable temperature, and so forth ; and these are undoubtedly matters which should receive attention prior to the admission of guests to the home cinema ; but there is an earlier preparation which should be undertaken : a general preparation for the " projection season."

Making Ready.

This preparation will obviously include the lubrication, cleaning up and general light overhaul of the projector ; the obtaining of spares of any parts which are liable to give out ; the insertion of a new lamp in the projector, while the deteriorated lamp is kept as a stand-by ; and the proper overhaul and organisation of all films.

Every film should be carefully examined on the rewinder so that damaged portions may be repaired and all joints tested. Any joins which are not perfectly sound should be remade to avoid breakage during projection.

Films of the amateur's own making should be edited, even if that means nothing more than cutting out unsatisfactory sections, placing the remainder in suitable order, and joining them up into reels of reasonable length. The possessor of a small 9.5-mm. projector limited to films of 60-ft. length cannot, of course, make up longer reels unless he acquires a " super " attachment (incidentally, a very worth-while investment), but even he should not be content to exhibit scrappy shots in 30-ft. containers. By careful editing and making up into 60-ft. lengths his films may be raised much above the standard of the man who simply projects his 30-ft. reels exactly as received.

As far as possible, all films should be properly titled, and in this connection the amateur who is equipped to film his own titles is at a great advantage as compared with his brother cameramen who must pay, perhaps, eighteenpence per title for a professional product. Nevertheless, even at eighteenpence per title, no film should be exhibited without having at the very least a main title and " The End." The latter is a stock " title," and can be bought in lengths sufficient for many films at a cost of a penny, or less, per film.

Having carefully overhauled the films and got them all shipshape on their respective reels, the next task is to properly label them and store them so that any desired subject can be found with precision at any time they may be wanted. There is some divergence of opinion as to whether film reels should be labelled each with the name of the film it contains. There would be much to be said in its favour were every film rewound immediately after showing ; but as this is generally agreed to be " bad cinema," most projectionists defer all rewinding until after the show is over. The result is that unless considerable orderliness is maintained in the disposition of reels during projection it becomes a tricky business to rewind each film upon its labelled reel.

Clear Labelling.

It is probably better, therefore, not to label the reels ; but in any case, the film itself should be clearly labelled *both at the beginning and at the end* with its title. If, for any reason, it becomes necessary to search through a number of reels, it is very annoying to have to unwind each leader strip until the main title appears. Also, if it is desired to project for a second time a film which has been shown earlier in the evening (and which is therefore " tail foremost " on a spool) it is a great convenience to be able to read, from the " tail " end, the title of each film. The label at the commencement should be marked : " (Title), Start," and the one at the end : " (Title), the End " ; this will instantly show whether or not a film requires rewinding.

Two easy methods of labelling films are available ; in one, a short strip of adhesive plaster (the medical variety) is stuck on the film at each end and the title written in ink on the linen surface with a quickly-moving pen ; the other method is to write or type the title on a very narrow strip of paper (say 3/16ths in. wide) and to lay this on the film with even margins, subsequently covering it with a piece of transparent adhesive tape of the full width of film and slightly longer than the paper strip. This tape is supplied by Amateur Ciné Service, Ltd.

If the amateur habitually stores his films in the special tins which accommodate a single reel each he should make a point of labelling each tin, both on the lid and on the side, so that any film can be selected whether the tins are strewn on the table or neatly piled in stacks.

By devoting an evening or two to this work of getting all films into apple-pie order the amateur projectionist will be able to make up his programmes with a minimum of delay, and will commence his shows secure in the knowledge that his films will not give trouble in the projector.

Making short films into reels of reasonable lengths for projection.

FUZZINESS *on the* SCREEN

By
CHARLES RHODE.

LACK of sharp definition on the ciné screen may be due to any one of a variety of causes, quite other than incorrect focussing of the camera when taking, or of the projector when displaying it. In actual fact there is no real sharpness; the effect of definition is really an optical illusion which is easily diminished in value by the least imperfection in the film itself.

Unsteadiness in Taking.

The most common fault which tends to reduce the crispness of a projected film is not error in focussing the camera, but unsteady holding of it. Strangely enough the subject of the film may move rapidly through a considerable space during the actual twenty-fifth of a second for which the lens is uncovered, without the eyes being annoyed by the fact that its details are not clear, yet it needs but to let the camera itself shake even a hundredth of an inch during the same brief period to make the eyes strain in search for that detail on the screen. That is because one is quite used to seeing objects moving more rapidly than one can follow them, but one is not used to seeing the whole scene vibrate. If in addition there is obvious grain in the image the result becomes most unpleasant to the eyes.

Fig. 1 is a selection of frames from a film in which the subject is moving from an out-of-focus distance, through the plane of sharp focus, to an out-of-focus closeness. On no single frame is the whole subject quite sharp, because certain details such as arms and feet move faster than 1/25th second can catch them. Yet on the screen the illusion of sharpness is satisfactory, simply because, as I said before, the eye is used to seeing the subject behave precisely in that fashion. The eye does not, and cannot, adjust its focus as the runner moves rapidly forward, any more than the camera lens can, and the eye does not look for details of fingers and of eyes in a runner.

In order to understand clearly just how grain does act, and why it is so important to do everything possible to keep it down, let us take an example of a film which is perfectly defined. Fig. 2 is from an original 16-mm. negative. In the print from which the reproduction was made the iris of the eyes, and even the pupils, can be clearly seen, although the diameter of an eyeball, in the actual film, is only a fraction over .1 mm. (about 1/200th of an inch). Even with such remarkable definition as this, when a positive is made from the negative, and is projected up to a three-foot picture, the image of that portion on the screen is like Fig. 3. Let us now suppose that the camera, in taking the film, had been " vibrated " to the minute extent of a 1/100th of an inch, those eyes would be spread out to a fuzzy blob double their size here! The same with every other point of detail.

Fig. 2.

Fig. 3.

Keep the Lens Clean.

Amongst other of the less obvious matters which may degrade the projected image, an important detail is cleanliness of the lens. One comes away from seaside spray or it happens to rain, or someone coughs or sneezes, and the damage is done to *the next* film, if the cause is not removed. The trouble is that these slight losses are often not noticed in examining the film. It is only on the screen that the fuzziness becomes an annoying mystery.

The condensation which occurs on a lens, whether a taking or projecting one, on going into a warm room from a cold place should *not* be wiped, because that act usually leaves smears. But when condensation occurs the lens should most certainly be cleaned afterwards. Repeated condensations have a way of attracting dust, and of causing it to form a greasy film, which goes a long way to help any other handicaps against good definition on the screen. It is better to look for it occasionally, and to remove it, than to wait until search for the cause of a fuzzy film eventually shows the lens to be looking like a bit of ground glass. Looking through a lens at a " clear," not a " pearl," electric bulb is often a revelation. Try it now, on yours!

Fig. 1.

BRITAIN'S FOREMOST 'MINICAMERA' EXPERTS

We have London's most up-to-date showrooms—an expert staff who know and use the Leica Camera—we have the best and most varied range of miniature cameras and all accessories, and are here to give advice on anything appertaining to miniature photography. Our service and facilities are unequalled.

WE STOCK EVERY LEICA MODEL from £16 : 19 : 0
or on easy terms from 39/7 down.

If you want the finest possible results send us your films for development by our "MICROLUX" and "INDIVIDUAL" Systems.

MICROLUX yields the finest grain of all, but requires that films be over-exposed.

Films processed in this way receive the most careful handling possible.

Price, per 36-exposure strip, **4/6**
18 exposures (35-mm.), **3/6**
Ask for descriptive MICROLUX leaflet.

NEW MINIATURE LITERATURE

All the latest books on Leica, Contax, Exakta, Rolleiflex, Rolleicord and every miniature camera are actually in stock. Get in touch with us for the one that fills your needs.

ALL THE NEW DEVELOPERS, INCLUDING :—

"W.H." Paraphenylene-Diamine. The finest fine-grain developer. Sufficient, per tin, for 20 oz. **1s. 0d.**

Tetenal Ultrafin. Non-poisonous fine-grain developer, can be used six times. **4s. 0d.**

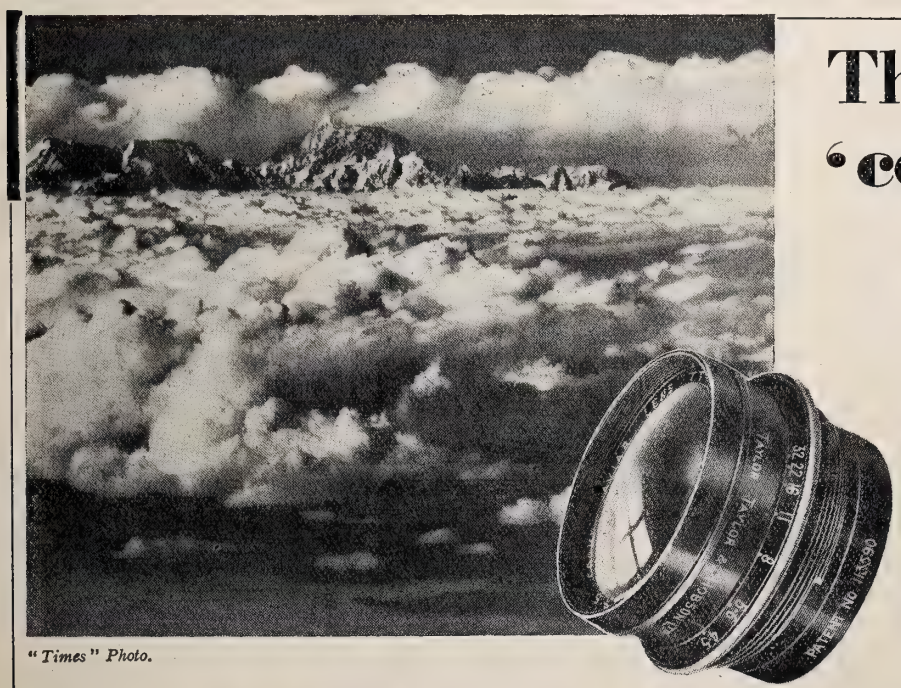
Supramin. Non-poisonous paraphenylene developer. Can be used repeatedly. **2s. 4d.**

Johnson's Fine-Grain Developer, can be used repeatedly. **1s. 0d.**

FREE CAMERA INSURANCE

We are the **only** firm who insure your miniature camera free of charge against fire, loss, theft or damage. As long as your miniature camera cost £10 or more, it is eligible. Send now for particulars.

EASY TERMS AND EXCHANGES



Anything on nine monthly payments. High allowance on your surplus apparatus in part exchange.

BARGAINS IN USED APPARATUS

SECOND-HAND GUARANTEED MINIATURE CAMERAS.

1—Zeiss Super Nettel 35-mm. Miniature Camera, f/2.8 Zeiss Tessar lens, focal-plane shutter, 1/10th to 1/1,000th sec. Cost £24 15s. £18 18 0
2—Contax Model I 35-mm. Miniature Camera, f/2 Sonnar lens, focal-plane shutter, ½ to 1/1,000th sec. Cost £41 ..... £32 10 0
3—3×4 cm. Nagel Pupille Roll Film Camera, f/2.8 Zeiss Tessar lens, Compur shutter, 1 to 1/300th sec., leather case. Cost £18 10s. £14 14 0
4—Standard Leica, Chromium, f/3.5 Elmar lens, focal-plane shutter, 1/20th to 1/500th sec. Cost £18. ..... £12 12 0
5—Leica IIIa, f/2 Summar lens, focal-plane shutter, 1 to 1/1,000th sec. Cost £43 ..... £37 10 0
6—Leica Hektor 2.8-cm. f/6.3 Wide-angle Lens for Leica, coupled, chromium. Cost £10 18s. 6d. £8 8 0
7—Zeiss Contaflex 35-mm. Twin-lens Reflex Camera, f/2 Sonnar lens, focal-plane shutter, ½ to 1/1,000th sec., delayed action, built-in photo-electric exposure meter, ever-ready case. Cost £74. ..... £57 10 0
8—Leica Model III, Black, f/2 Summar lens, focal-plane shutter, 1 to 1/500th sec. Cost £39 14s. £33 10 0
9—Six-Twenty Duo Kodak, f/4.5 anastigmat lens, delayed-action Pronto shutter. Cost £6. ..... £4 15 0
10—3×4 cm. Nagel Vollenda, f/3.5 Radionar lens, Compur shutter, 1 to 1/300th sec. List £7 10s. Cash. £6 6 0
11—Kodak Retina 35-mm. Miniature Camera, f/3.5 Xenar lens, Compur shutter, 1 to 1/300th sec., case. Cost £11 7s. 6d. £8 17 6
12—6×6 cm. Certo Super Sports, f/2.9 Meyer Trioplan lens, Compur shutter, 1 to 1/250th sec., plate back, 6 single slides, focussing screen, case. Cost £10 10s. £6 17 6
13—Rolleiflex 4×4 cm. Twin-Lens Reflex, f/2.8 Tessar lens, Compur shutter, 1 to 1/300th sec. Cost £26. ..... £18 18 0
14—Ensign Double-Eight 16-on-V.P. Roll Film Camera, f/4.5 Ensar lens. Cost £3 12s. 6d. £2 9 6
15—13.5-cm. f/4.5 Leitz Elmar Coupled Lens for Leica. Cost £14 17s. £11 11 0
16—10.5-cm. f/4.5 Ihagee Long-focus Anastigmat Lens for Exakta, interchangeable. As new Cost £5 15s. £4 7 6

The lens that 'conquered' EVEREST

A cameraman risked his life to get this photograph of Everest. And to make the hazard worth while . . . . . to make **certain** of results—only the world's best lens was considered good enough—a Taylor-Hobson Cooke lens !

"YOU SEE..WHAT YOU SAVE IN DUTY YOU GET IN TOBACCO!"

It's unusually good tobacco, too, is RHODIAN—rich, ripe leaf from Rhodesian fields. Moreover the saving in duty is passed on in full to the smoker which is why you get such a wonderful smoke at the moderate price of tenpence-halfpenny an ounce.

RHODIAN
CURLY CUT

RH 2269

RHODIAN ALL-BRITISH TOBACCO COSTS ONLY 10½D AN OZ

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing. shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

Projectors, Lanterns, Films, Plates and Accessories

A review and Buyer's Guide for all amateur ciné workers and everyone interested in projection work with the lantern. For the benefit of readers these notices have been grouped so that comparisons of apparatus can be made with a view to purchase. Each article illustrated is marked with an asterisk in the notice referring to it. The addresses of the firms supplying these goods can be ascertained by reference to our advertisement pages, and in each case we suggest that readers apply to the address given for further particulars, which will be sent free on application.

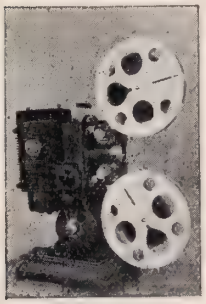
SECTION I.—PROJECTORS. (Motor-driven unless otherwise stated.)

Actina Ltd.

Eumig,* 8-mm., 9.5-mm. or 16-mm. (separate models), 250-watt, forced cooling, "still" picture device, reverse motion, pilot light, central oiler for all internal bearings. Either model, £29.

Eumig PIII, 8-mm., 9.5-mm. or 16-mm. (separate models), 250-watt, fan cooling, "stills" device, £17 17s.

Agfa Photo Ltd.



Movector Domestino, 16-mm., 400-ft. capacity, special cooling, "still" picture device, £17.

Movector "CS," 16-mm., "stills" device, £25.

Movector Super 16, 16-mm., automatic rewind, automatic regulation of resistance, 750-ft. capacity, £75.

Ampro. Importers: M. W. Dunscombe Ltd.; Edwin Gorse; Sheffield Photo Co., Ltd.

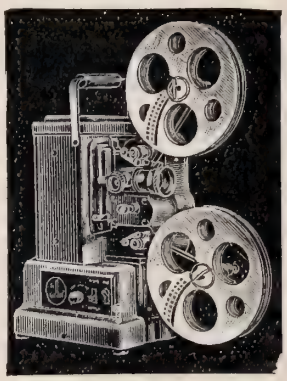
16-mm., double-acting split-phase rotary shutter, central control board, forced ventilation by Venturi tube, "still" clutch, 400-ft. capacity. 500-watt series: Model J, £39 10s.; Model JD, with aspherical condensers and automatic pilot light, £45. 750-watt series: Model K,* £44 10s.; Model KD, with aspherical condensers and automatic pilot light, £50.

"Ampro" Sound-on-Film system. Projector and amplifier form single unit, 1,600-ft. capacity, Model M, £110; Model N, £125.

British Thomson-Houston Co., Ltd.

16-mm. Sound-Film Projector, all mains operated, amplifier, 5-watts output. RK moving coil permanent magnet loud-speaker.

Cinex, Ltd.

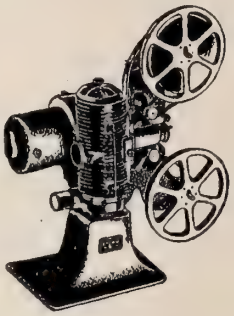


Paillard-Bolex P.A., 9.5-mm., 400-watt, "stills" and reverse mechanism, £25 10s. 400-watt resistance for high voltages, 37s. 6d. extra.

Model K8, 8-mm., 400-watt, "stills" and automatic reverse action, £25 10s. 400-watt resistance, 37s. 6d. extra.

Model C, 16-mm., 400-watt, "stills" and automatic reverse, £25 10s. 400-watt resistance, 37s. 6d. extra.

Model G16, 16-mm., entirely gear driven, 250 and 500 watt interchangeable, "still" picture and reverse mechanism, £44. 500-watt resistance for voltages 200 to 250, 50s. extra.



Model DA, for both 9.5-mm. and 16-mm., 400-watt, £37 10s. Resistance 37s. 6d. extra.

Model G916, for both 9.5-mm. and 16-mm., entirely gear driven, 250 and 500-watt interchangeable, "stills" and reverse mechanism, £47. Resistance 50s. extra.

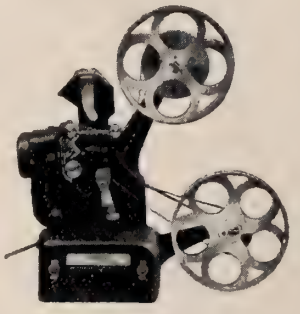
Model G3,* for 8-mm., 9.5-mm. and 16-mm., entirely gear driven, 250 and 500 watt interchangeable, "still" picture and automatic reverse mechanism, stainless steel gate, £60. Resistance 50s. extra. Special Meyer 20-mm. projection lens for 8-mm. films, £4 extra.

Bell & Howell Co., Ltd.

Filmo Model 130, 16-mm., 1,000-watt, 1,600-ft. capacity, £129.

Filmo Model 129, 16-mm., 750-watt, 1,600-ft. capacity, £60.

Filmo,* 8-mm., 400-watt, 200-ft. capacity, £40.



Cinepro, Ltd.

Home Model, 16-mm., 200-watt, £35.

Standard Model, 16-mm., 200-watt, 19-ft. picture, fan cooling, £52 10s.

Sixteen-Nine, 9.5-mm. and 16-mm. Similar specification to standard model, £59 10s.

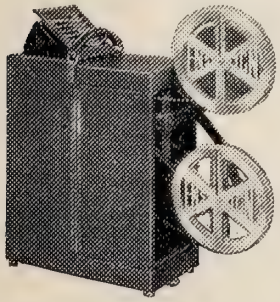
Coronet Camera Co.

Model II,* 9.5-mm., hand drive, 60 or 400 ft. capacity, clawless movement preventing damage to films, geared rewind 5–1 ratio, £5 5s. Motor drive unit to fit inside base, 45s. extra.

J. H. Dallmeyer Ltd.

Victor Model II, 16-mm., 500-watt, "stills" and reverse mechanism, forced draught cooling, shuttle running, constant speed motor, £42.

Victor Model 22, 16-mm., 750-watt, 1,600-ft. capacity, lever control of rewind mechanism, £55.

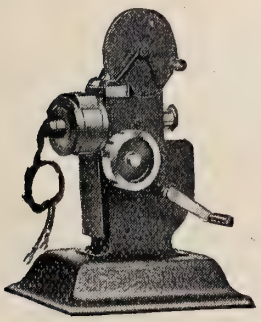


Victor Model 21, 16-mm., 750-watt, 1,600-ft. capacity, framer operated by milled knob, Dallmeyer Max-lite projection lens, £63.

Victor Animatophone, 16-mm., Sound-on-Film Model 24B, 750-watt, 1,600-ft. capacity, automatic power rewind, 12-in. dynamic speaker, £175.

Victor Animatophone, 16-mm., Sound-on-Film Model 25, 500-watt, 1,600-ft. capacity, £105.

Ensign, Ltd.

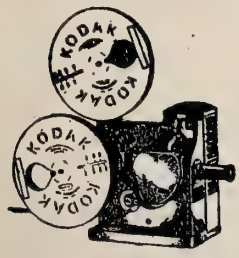


Ensign 100-B,* 16-mm., 100-watt and reflector, 400-ft. capacity, both spool arms brought into position with one movement. Dallmeyer Super-lite projection lens, £17 10s. Hand drive model, £15.

Ensign 300-B, 16-mm., 300-watt and reflector, 400-ft. capacity, £29 10s.

Home Ciné Cameras, Ltd.

"Ray" Projector, Model I, 60-ft. capacity, hand drive, battery lighting, 12s. 6d.; or for mains lighting, 19s. 6d.



Model II,* 60-ft. capacity, hand drive, battery lighting, 21s.; mains lighting, 29s. 6d.

Kodak, Ltd.

"Kodascope" Model "D,"* 16-mm., 400-ft. capacity, fan cooled, £25.

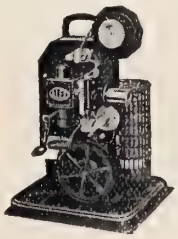
"Kodascope" Model "L," 16-mm., lever focussing, centralised control, "stills" device, forward and immediate reverse action, high-speed motor rewind, centralised oiling to all main bearings. Table lamp for rewinding, £67 10s.

"Kodascope" Eight, Model 30, 8-mm., 100-watt, 200-ft. capacity, "stills" device, £9 9s.

"Kodascope" Eight, Model 80, 8-mm., 300-watt, 200-ft. capacity, motor rewind, "still" picture device, forced draught cooling, £33.

Edwin Gorse.

16-mm. RCA Sound or Silent Projector, £95; studio amplifier, £68; critical lens focusser, £7 10s.



16-mm. De Vry Talkie Projector, 1,000-watt, 15-watt power output, 1,600-ft. capacity, clawless movement, 165 gns.; 500-watt model with 7-watt output, £118.

16-mm. De Vry Superlux Projector, 1,000-watt, 1,600-ft. capacity, clawless movement, 75 gns.

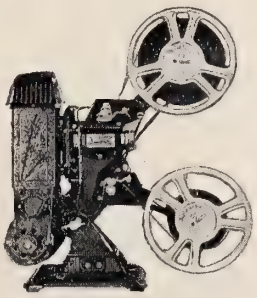
16-mm. De Vry Standard Projector, 200-watt, £14 14s.

Luminos, Ltd.

Bilcin 101, 9.5-mm., 300-ft. capacity, Maltese cross action, automatic "still" picture device, micrometer tilting, 25-watt, including resistance, £9.

Bilcin 171,* 9.5-mm., hand drive, 60-ft. capacity, £4 15s.

Bilcin 172, similar to 171, but without "stills" device or micrometer tilting, £3 3s.



Bilcin 85, 9.5-mm., hand drive junior model, 30 and 60 ft. capacity, £1 5s.

N. Marshall.

16-mm. Sound-on-Film Equipment, three-stage amplifier, moving coil speaker, £125.

Pathéscope Ltd.

9.5-mm. "Ace," hand-drive, power or battery projection, 60-ft. capacity (super attachment ready shortly, price 10s. 6d.), 37s. 6d.

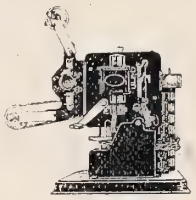
9.5-mm. "Imp," hand drive, 60-ft. capacity, £4 12s. 6d.

9.5-mm. "Imp," 300-ft. capacity, £7.

9.5-mm. "200-B,"* 200-ft. capacity, single-unit tilting, fan cooled and asbestos-lined lamphouse. Simple removal and rewind, sprocket feed, £15.

9.5-mm. "Lux," 200-ft. capacity, 160-watt, £30.

R. E. Schneider.

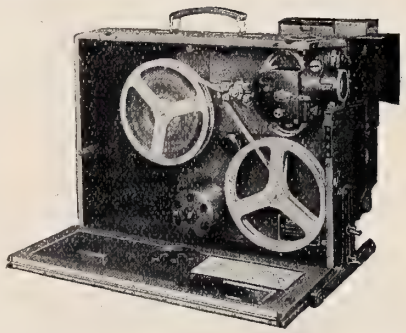


Keystone 750,* 16-mm., 750-watt, forward and reverse drive, motor rewind, automatic cooling, pilot light, knob swivel tilting. Price, including resistance and splicing outfit, £36 10s., or with transformer, £37 10s.

Keystone 500, 16-mm., 500-watt, 400-ft. capacity, motor rewind, knob swivel tilting. Price, including resistance and splicing outfit, £26 10s., transformer, £1 extra.

Keystone 300, 16-mm., 300-watt, 400-ft. capacity, motor rewind, tilting device. Price, with resistance and splicing outfit, £18 18s.

Illustra Enterprises.

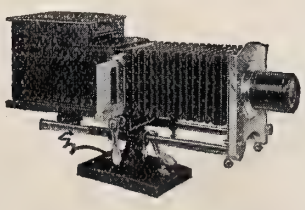


The 9.5-mm. Projector* is available for mains or battery illumination, the drive being by hand. A special declutching device enables "stills" to be shown, adequate cooling preventing overheating of the lamphouse or film. The price is 99s.

Soho, Ltd.

Peerless 916,* 16-mm. or 9.5-mm., 400-ft. capacity, clawless movement overcoming difficulty with damaged perforations, automatic centring, high-speed semi-automatic external rewind. Price, for either model, £12 12s. Resistance, £2 2s. extra.

Zeiss Ikon Ltd.



Kinox,* 16-mm., "stills" device, pilot lamp, fan cooling, 400-ft. capacity, 375-watt, £76 15s.; 500-watt, £77 2s. 6d.

SECTION II.—PROJECTION LANTERNS, EPISCOPES AND EPIDIASCOPES.

Ensign, Ltd.

Optiscope 6A,* 250- or 500-watt light, Aldis Uno 10-in. projection lens, linen-lined leather bellows, £8 10s., or with Aldis-Butcher lens, £10 10s.

Optiscope 9A, lamps up to 500-watt, long extension, taking lenses to 18 in. focus. With 8 or 10 in. Aldis Uno lens, £12 15s., or with 8 to 18 in. Aldis-Butcher lens, £14 15s.

Optiscope 6B, travelling model, 100-watt light, all-voltage resistance, Aldis Uno lens, £9 15s.

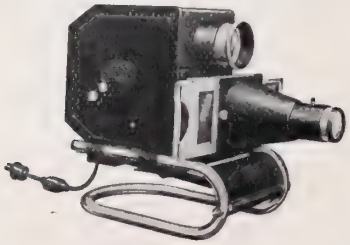
Model 9C, with 500-watt light, £17 10s. Extra to each model for Aldis-Butcher lens, £2.

Optiscope 20, 1,000-watt, takes lenses to 20 in. focus, draught cooled, Aldis-Butcher lens 8 in. to 20 in. focus, £25.

Other projection lanterns from 27s. 6d. to £7 10s.

Garner & Jones, Ltd.

Projection Lumimax, for film slides to 2¼×2¼, or glass slides to 2¼×1⅝, Ihagee f/4.5 anastigmat, £13.

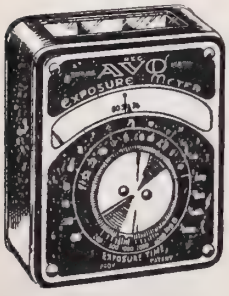


Sands Hunter & Co., Ltd.

"K.W." Episkop,* Episcopic aperture 3½×3½ in. projecting to 26×26 in., £5 15s. Lamp extra.

Zeiss Ikon Ltd.

Adept Epidiascope,* 250-watt, episcopic aperture 5⅛×5½ in., 12-in. f/4 episcopic and 6-in. diascopic lenses, £22 2s. 6d. Episcop only, £17 17s. 6d.



Lektor Epidiascope, 500-watt, episcopic aperture 5½×5½ in. Horizontal projection of slides, forced cooling, £41 15s.

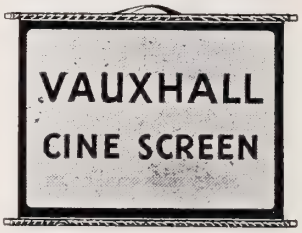
Famulus Epidiascope, Model II, episcopic projector f/3.3, forced draught cooling, £75 10s.

Diabox Portable Lantern-slide Projector, 250-watt, £16 10s.; 500-watt, £17 5s.

SECTION III.—ACCESSORIES.

Automatic Coil Winder and Electrical Equipment Co., Ltd.

"Avo" Universal Photo-electric Exposure Meter,* calibrated in f/numbers, and H. & D. speeds, £3 3s.; Ever-ready case 5s. extra.



Amateur Ciné Service.

"Wipacine" Wiper for use with or without titling apparatus, 9×6¾ in. mask, no winding back of film, 30s.

"Amacine" Transformers for Pathéscope 200-B, 35s.; for 400-watt projectors, 45s.; 500-watt, 50s.; 750-watt, 90s.

"Fadeine," 3s. 6d.

The Camera Co.

"Vauxhall" Silver Surface Ciné Screen,* 30×40, on rollers, 11s. 9d., or with stretchers, 15s. 6d.

"Vauxhall" Super Silver Screen, 52×40, with stretchers, 21s.

"Vauxhall" Glass Beaded Screen, 30×40, with stretchers, 32s. 6d.

Cinepro, Ltd.

Film Slide Adapter, £7 15s.

Coronet Camera Co.

Silver Screen, black-bordered, on rollers, 30×20, 7s. 6d.; 40×30, 15s. 6d.

Coronet Titler, 9.5-mm., without lamps, 21s.; lamps extra, 2s. 6d. each.

J. H. Dallmeyer, Ltd.

Craig Splicers, Junior Model, £1 1s.; Senior Model, £2 12s. 6d.

Craig Rewinds, popular model, on board 4×24 in., 25s.; Senior Model, geared 4–1, £2 12s. 6d. for 100 to 800 ft., for 1,600-ft. reels, £3 3s.

Dallmeyer Popular Titling Outfit,* for 8-mm., 9.5-mm. and 16-mm. films, complete with white felt letters and 2 lamps, £3 3s.

Optical Bench Outfit, providing wipes, £5 5s.

Drem Products, Ltd.

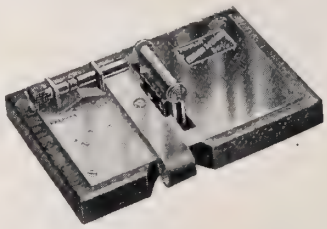
"Electrodrem" Photo-electric Exposure Meter, indicates daylight exposures 1/1,000th sec. to 8 minutes. Gives direct readings for artificial light and panchromatic material with or without filters, £3 15s.

M. W. Dunscombe Ltd.

"BristOlite" Transformer for Ampro projectors, 500-watt and 750-watt, £6 10s.

Ensign, Ltd.

Lecturer's Electric Pointer, 15s.; mains model, A.C. only, 32s. 6d.



Lecturer's Travelling Slide Boxes, 8s. 6d.; de luxe, 13s. 6d.

Lantern-Slide Making Outfit,* for standard slides from miniature negatives. Contains spot binder cover-glasses, printing frame with guides for masks, and miniature negative masks, 5s. 6d.

Animator and titler, enabling cartoons and animated drawings to be shown, £6 17s. 6d.

"Universal" Splicer for 8-mm., 9.5-mm. and 16-mm., 57s. 6d. "Popular" Splicer,* 17s. 6d. "Universal" Editor, including splicer, £5 7s. 6d; "Popular" Editor, 42s. 6d.

"Rigid" Silver Screens, 24×18, 22s.; 32×24, 32s.; 40×30, 42s.

"Ciné-Bewi" Photo-electric Exposure Meter, £4 10s.; "Zip" fastener case, 5s. extra.

Edwin Gorse.

Beaded Screens, roller carriers, metal automatic case, from 45s.

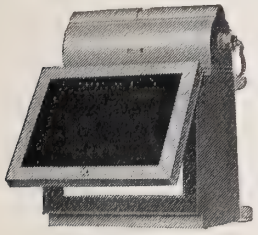
Aluminium Reels, 400-ft. capacity, 9.5-mm. or 16-mm., 2s.

Superlight Lenses for Pathéscope 200-B projector, 63s.

R. F. Hunter Ltd.,

"Celfix" Patent Automatic Screens,* self-erecting, drum-taut. Silver or Crystal Bead, prices respectively, 27×20, £3 10s., £4 10s.; 40×30, £4 12s. 6d., £6 10s.; 52×40, £6, £8 10s. Larger sizes to 96×72. Super "Celfix," crystal bead surface, 9 ft. × 7 ft., £30; larger sizes to 13 ft. × 10 ft.

"Atlanta" Screen, roller and pulley. Crystal bead surface 6 ft. 6 in. × 6 ft. 6 in., £20. Larger sizes to 13 ft. × 10 ft.



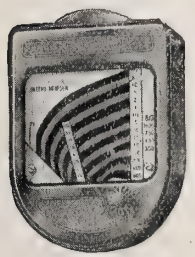
"Self-Recta" Screen, self-erecting, silver surface, 27×20, £2 5s.; 40×30, £3 2s. 6d.; 52×40, £4.

"Silvette" Rigid Screen, silver surface or crystal bead, prices, respectively, 24×18, £1 7s. 6d., £2 7s. 6d.; 32×24, £1 15s., £3; 40×30, £2 7s. 6d., £4.

Roller Screens from 15s.

Ilford Ltd.

Ilford Photo-electric Exposure Meter, price £3 3s.; Ever-ready case, 5s. extra. Grouping system for dealing with H. & D., DINandScheiner speeds.



Ilford Dark-room Lamps.* Ilford dark-room lamps are available in several types, but each has the same characteristic, namely, each lamp ensures high illumination with perfect safety. Prices and full description of all Ilford dark-room lamps will be supplied on request.

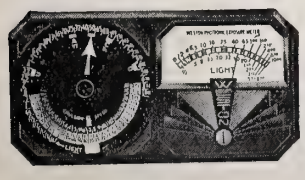
Selo Lighting Set.* Designed for use with Selo Hypersensitive Panchromatic roll film and Ilford Hypersensitive Panchromatic plates. The lamp and adapter can be adjusted to any angle. The outfit includes three yards of twin flex, plug, adapter and photoflood lamp. Price 17s. 6d.

Sands Hunter & Co., Ltd.

"Prinsen" Photo-electric Exposure Meter,* £3 3s. Ever-ready case, 5s. extra.

Neron Nitraphot Reflector. Type "S," 10s. 6d. Type "K," 12s. 6d.

"Arri" Ciné Film Printing Machine, motor driven, 16-mm., £20; 9.5-mm., £20.



R. E. Schneider.

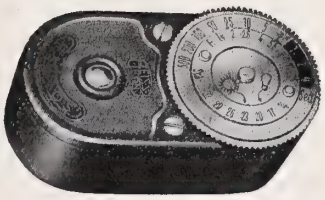
Tripod model Crystal Beaded Screen, with black border, roller tubular container, 30×40, £6 10s.; 36×48, £8 10s.; 42×56, £9 10s.

"Keelite" Beaded Screen, easel model on rollers, 22×30, 25s.; 30×40, 39s. 6d.

Weston Electrical Instrument Co., Ltd.

Weston Photronic Exposure Meter. Model 650* with special instructions for correct exposures with Kodachrome film, £5 19s.; leather case. 10s. extra.

Kodak, Ltd.



"Photoflood" Lamp, 2s. 6d.

"Kodalite" Lighting Equipment, single unit, £3 17s. 6d.; Double unit, £5 10s.

Ciné-Kodak Titler for 8-mm. and 16-mm. titles, £2.

"Kodascope" - Eight Screen, self-erecting, 30×22 in., £2 19s. 6d.

Zeiss Ikon Ltd.

Helios Photo-electric Exposure Meter,* £4 15s.; Ever-ready case, 4s. extra. Nitraphot Reflector, 23s. 6d.

SUB-STANDARD CINÉ FILM.

Actina Ltd.

"Bauchet" Orthochromatic Reversal Film: 16-mm., 50 ft. 6s. 6d., 100 ft. 12s.; 9.5-mm., 30 ft. 2s. 3d., 50 ft. 4s.

Agfa Photo Ltd.

16-mm. Reversible Pan.: 40 ft. 12s. 6d., 50 ft. 14s., 100 ft. 26s.

16-mm. Standard Pan.: 50 ft. 14s., 100 ft. 26s.

Super Sensitive Pan.: 16-mm., 50 ft. 17s. 6d., 100 ft. 32s. 6d.

"Kodachrome": 16-mm., 50 ft. 22s. 6d., 100 ft. 42s.

Pathéscope, Ltd.

9.5-mm. Orthochromatic reversible in daylight loading charger, 30 ft. approximately, 4s. 6d., or with Super Speed Panchromatic, 5s. 6d., including processing and loan of charger.

9.5-mm. for loading into charger: Orthochromatic, reversible or positive, 30 ft. approximately, 7s. 9d. per box of three spools.

LANTERN PLATES.

Actina Ltd.

Bauchet "Vitra," warm tone; "Black Tone," per dozen 1s. 4d.

Criterion (Plates, Papers, Films), Ltd.

Special, Bygas, Mezzotone Rapid, price per dozen 1s. 10d.; backed, 4d. extra.

Elliott & Sons, Ltd.

Barnet Cold Tone, Warm and Cold Tone, Gaslight and Verona, per dozen 2s. 3d.

Gevaert, Ltd.

Black Tone Rapid, Gaslight Vigorous, Process Vigorous, per dozen 2s. 2d.; Anti-Halo, 4d. extra.

Ilford Ltd.

Special Warm Black, Alpha, Gaslight, per dozen 2s. 3d., backed 2s. 7d.

Dufaycolor Lantern Slides. Dufaycolor transparencies can be supplied bound up as lantern slides in addition to mounted transparencies for viewing in the hand. Copy transparencies can also be supplied and monochrome negatives made from the original Dufaycolor transparency.

Kodak, Ltd.

Eastman Black Tone, 2 speeds, regular and slow, per dozen 2s. 3d.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Photography Abroad.

I am going to Switzerland soon, and have been told by one firm who make films that I should not use either panchromatic film or a filter. They recommend their "chrome" film. A second firm tells me to use their panchromatic film with a medium yellow filter, or alternatively with a special ultra-violet filter requiring no increase in exposure. My dealer suggests pan. film with a five-times green filter. Whose advice do I follow, please? P. G. (London.)

All the different advice you have been given seems to assume that all the subjects you are likely to take in Switzerland are of one particular character. In our opinion, this is an entirely wrong assumption. Our own advice would be that you should use the film with which you are familiar. As to the filter, there are some occasions when it would be an advantage, and others when it would be the reverse. A filter would help you to get clouds and snowy peaks against a blue sky; on other occasions a filter would minimise the effect of mist, which might be an important feature of the subject.

Some Enlarger Queries.

I am making an enlarger and shall be obliged if you will inform me if it is essential to have a condenser, or whether a piece of ground glass between the light and the negative would serve the same purpose. I shall be using electric light. Could you also give me the approximate exposure for a normal negative, using a 60-watt lamp? G. G. S. (Bristol.)

Whether or not a negative can be satisfactorily illuminated without a condenser depends largely upon the size of the negative itself, and you give no information on this point. If the negative is about 3×2 or larger, we should ourselves prefer a condenser. There is no answer whatever to your second question, which depends upon several factors which you do not mention. The only method is to find out by actual experiment, giving strip exposures in a way we have often described in our columns.

Double Image on Enlargements.

Can you tell me the cause of the double image on the enclosed pictures? There seems no evidence of this trouble in contact prints, which would appear to put the blame on the enlarger (home-made). I may add that I make a lot of enlargements up to 15×12 in. which bear no trace of this trouble; it appears only on half-plate and postcard size prints. T. B. (Falkirk.)

You do not say whether the double image appears on the negative, which we think to be very unlikely, and, in that case, the particulars that you give as to camera, exposure, plate, and so on, are quite beside the mark. If you use a yellow cap on the lens of the enlarger while adjusting the bromide paper it is quite possible that this is unsafe and causes a weak image, which would be slightly displaced owing to the character of the lens cap. The non-appearance of the second image when making big enlargements is probably due to the much weaker illumination of the easel at high magnification; even if you spend a few seconds longer in adjusting the larger sheet of paper, the feeble yellow light would probably not have time to produce a perceptible image.

Inadvertent Over-exposure.

I recently had occasion to borrow a camera in order to take an object of particular interest. Four exposures were made with the shutter set at 1/25th sec., this being the correct exposure. I now learn from the owner that the shutter marking is incorrect and that the exposure given was approximately ½ second. I shall be glad to know if anything can be done to save the negatives. A. M. (Crewe.)

It is rather a difficult matter to deal satisfactorily with very much over-exposed negatives. The best course in our opinion is to use a vigorous and quick-working developer, considerably restrained with potassium bromide, and stop development directly sufficient shadow detail has been secured. You may get a dense negative, but you will probably be surprised at the amount of extra exposure that can be given without really fatal results. If the camera was held in the hand for the half-second exposures you gave, you must be prepared to find some at least of the negatives badly blurred through camera movement. To hold a camera rock-steady for half a second requires considerable care and practice.

Checking a Focussing Scale.

I should be obliged if you would give me the correct procedure for checking the lens focussing on my camera, as the scale seems to be inaccurate. I appreciate that one should focus on an object at various accurately ascertained distances by means of the focussing screen, but I am puzzled by the problem of "depth of focus" and do not see how I can be certain of making sure that the point at which I mark the scale will be exactly in the middle of the limits within which everything is in focus. A. S. B. (Middlesex.)

If you focus on some very clearly defined object and get it critically sharp you need not bother about depth of focus. A few tests on objects at the nearer distances marked on your scale will soon show whether it is inaccurate or not.

Avoiding Stained Fingers.

Is there any way of avoiding or removing amidol developer stains on the fingers (apart from rubber gloves, which tear easily), or, alternatively, can you advise a similar developer which can as easily and cheaply be made up at home when required? D. M. (Fife.)

We regret that we know of no reliable method of either avoiding or removing amidol stains from the fingers. There are many other developers which work equally satisfactorily, such as M.Q. We would also draw your attention to the single-solution developers, which require nothing but dilution for use.

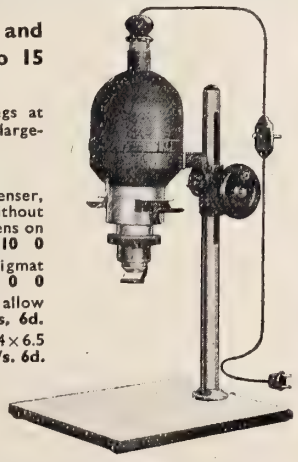
Copying.

I get flat negatives when copying photographs, using ortho plates of speed 650 or 350 H. & D. Should I use process plates for black-and-white and process pan. plates for others to get more contrast? I have tried various exposures, but cannot get a negative of printing quality. B. J. B. (Ipswich.)

We have frequently given advice on copying. A process plate is suitable only when there is nothing but dead black and pure white in the subject. For copying photographs you should use an ordinary plate, with a speed of something like 100 H. & D. If your negative is flat it may be due to over-exposure, or more probably to too short a developing time. The time of development for a copy negative is usually quite half as long again as the same plate would require for an ordinary subject. Correct exposure and degree of development must be found by actual experiment.

Unauthorised Publication.

If I take a photograph of someone without their knowledge or permission, can it be used (a) for publication and competition work; (b) for advertisement illustration? L. S. (Alveston.)



In the ordinary way there is no legal objection to your using such a photograph as mentioned, provided that its publication does not result in any way in the annoyance of the person represented or in holding him up to public ridicule or opprobrium. Apart from the legal aspect, courtesy would suggest asking for permission before publishing the photograph.

EXAKTA DUPLEX LUMIMAX

1936 Entirely New Model—

COMBINATION ENLARGER AND PROJECTION LANTERN

For Exakta, V.P., 6×6 cm. and smaller sizes, enlarges to 15 times linear.

Baseboard 12×12 in. Body swings at right angles for projection, or for enlargements larger than 12×12.

PRICES :

Enlarger, with 4-in. double condenser, baseboard, stand and flex, without lens or lamp, for use with the lens on Exakta cameras.....£10 10 0

Ditto, ditto, with f/4.5 Ihagee anastigmat £13 0 0

Projection attachment for body to allow for greater distances.....17s. 6d.

Glass Masks, 24×36 mm., 3×4 cm., 4×6.5 cm., 4×4 cm., 6×6 cm., in case 7s. 6d.

Carrier for Transparencies (Lantern Slides), 2×2 in. or 2¼×1⅝ in.....6s. 6d.

100-watt Opal Lamp (state voltage when ordering)..4s. 6d.

Have you received the new Exakta Price List? If not, ask for one—post free.

GARNER & JONES LTD., POLEBROOK HOUSE, GOLDEN SQUARE, LONDON, W.1

Phone: GERRARD 2300.

Two Special Services for Miniature Camera Users

1. MINIATURE FILM PROCESSING.

We were the first firm in Great Britain to undertake the fine-grain development of miniature films by individual methods. We still remain the ONLY FIRM EXCLUSIVELY PROCESSING MINIATURE FILMS. Our superior experience gained in this way is at the disposal of serious amateur photographers, who, lacking the time or facility to do their own processing, require a better type of service than that customarily afforded by large standardised organisations, working on mass production principles.

We undertake two different services: standard Fine-grain Development (employing a buffered borax type of developer) and a very special service by which development is done in Paraphenylene-Diamine. The latter method is positively the finest that at the present stage of miniature technique it is possible to obtain. Extreme precautions are taken to produce superlative results, and each film is finally treated in TEITEL SCRATCHPROOF SOLUTION, rendering it practically impervious to subsequent damage. Supersensitive panchromatic films intended for development in Paraphenylene-Diamine developer should receive approximately double normal exposure, though if circumstances make this impossible and we are duly notified, we can compensate to a large extent for shortness of exposure time by varying the Glycin content of the developer. Please write to us for full particulars.

2. MINIATURE CAMERA REPAIR SERVICE.

Every expensive miniature camera should receive an overhaul at least once yearly, and this is the best time of the year to have it done. After a summer's continuous use, range-finders tend to get out of adjustment, lenses to become dull, and shutters dirty and sluggish. Send your miniature camera to us for a quotation. We will make it once more equal in every way to a new camera at a few days' notice and a very low cost. We are fully equipped with the proper tools to undertake the repair of all types of miniature cameras, and employ for this purpose a highly trained technical staff.

R. G. LEWIS

The Miniature Camera Specialist

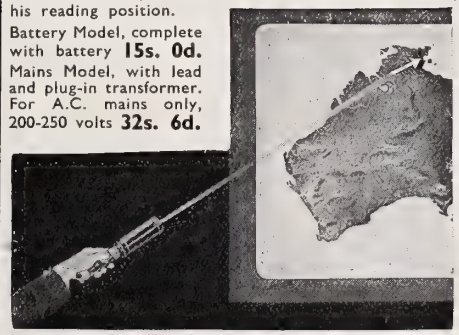
LANTERN-SLIDE MAKING OUTFITS

These simple outfits enable lantern slides to be produced simply and as easily as a contact print. Everything is provided in the outfit to complete the finished slide (except actual lantern plates). The outfit includes printing frame with guides for Leica or Contax Ciné negatives in strip, negative masks and glass, packet of 12 combination cover-glasses and 12 masks.

No. 1, for Leica or similar size ; No. 2, for 2¼ × 2¼ ; No. 3, for half "20" size .....**5s. 6d.**

If you do not wish to print your own slides the Ensign Snapshot Service (through your dealer) will make them for you at **9s.** per dozen.



The finished slide can then be made with one of the following masking sets.

A, for Leica or similar size ; B, for 2¼ × 2¼ ; C, for half "20" size.....**2s. 6d.**

ELECTRIC TORCH POINTER

This ingenious device enables a lecturer to project an image of an arrow on any desired point of the picture, without moving from his reading position.

Battery Model, complete with battery **15s. 0d.**
Mains Model, with lead and plug-in transformer. For A.C. mains only, 200-250 volts **32s. 6d.**

A NEW AID TO BETTER PICTURES

"COMPOSITION FOR PHOTOGRAPHERS"

By RICHARD N. HAILE.
10s. 6d.

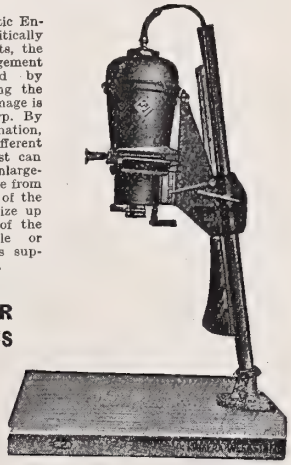
A book for those who have mastered the "mechanical" side of their art but wish to have, in condensed form, definite information on how to compose their pictures. Of invaluable assistance to amateur or professional photographer, artist or art student.

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

For Miniature Camera Negatives
PRAXIDOS
VERTICAL ENLARGERS

HAND-FOCUSSING "PRAXIDOS"

This hand-focussing Praxidos Vertical Enlarger can be set for any degree of enlargement by releasing a lever. The lamphouse can be raised or lowered until the desired size of enlargement is obtained. Focussing is completed by means of the helical focussing mount of the lens. Single or double condensers supplied as required. Illumination is obtained from a 100-watt opal lamp. Please state voltage when ordering.



CALL FOR A DEMONSTRATION

No. 453 Praxidos "O," for 1¼ to 8 times enlargements from 4 × 4 cm. (1½ × 1½ in.) or smaller negatives, f/4.5 anastigmat lens, with iris diaphragm..... **£8 10 0**
No. 454 Praxidos "O," as above, without lens.. **£4 12 6**
No. 463 Praxidos "O," for 1½ to 6 times enlargements, from 6 × 6 cm. or smaller negatives, f/4.5 anastigmat lens, with iris diaphragm..... **£10 0 0**
No. 464 Praxidos "O," as above, without lens.. **£5 12 6**
No. 473 Praxidos "O," for 2 to 7 times enlargements from 3¼ × 2½ in. or smaller negatives, f/4.5 anastigmat lens, with iris diaphragm **£15 15 0**

AUTOMATIC FOCUSSING "PRAXIDOS"

Praxidos Automatic Enlargers give critically sharp enlargements, the degree of enlargement being determined by raising or lowering the lamphouse—the image is always needle-sharp. By varying the illumination, enlargements of different degrees of contrast can be obtained. Enlargements can be made from any selected part of the negative of any size up to the capacity of the enlarger. Single or double condensers supplied as required.

WRITE FOR PROSPECTUS AND PRICE LIST

No. 502 Automatic Praxidos, for 2 to 10 times enlargements from 4 × 4 cm. (1½ × 1½ in.) or smaller negatives, fitted with f/3.5 anastigmat lens, with iris diaphragm **£17 10 0**

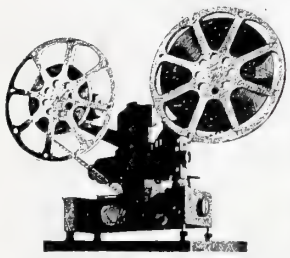
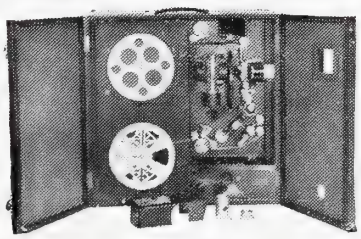
WALLACE HEATON LTD.



EVERYTHING FOR TALKIES, MOVIES, ENLARGING, AND ALL ACCESSORIES

FILMO 'EIGHT'

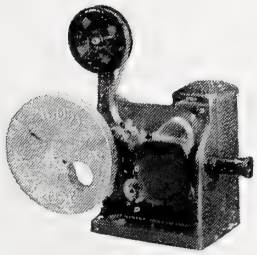


Has 400-watt lamp. Entirely gear driven. F/1.6 projection lens. Pilot light. Adjustable tilt and efficient cooling. Take 200-ft. films. For all voltages 110 to 250..... **£40 : 0 : 0**

Nine monthly payments of 93/4.

'FILMO' 1,000-WATT

The most powerful 16-mm. projector yet produced—with its new optical system, provides 80 per cent. greater screen brilliance than 750-watt projector, with only a 33⅓ per cent lamp wattage increase. Fully adequate cooling. 1,600 ft. film capacity..... **£129:0:0**



'GEBESCOPE' MODEL B

16-mm. portable sound equipment, composed of 2 carrying-cases, one containing the projector unit and the other twin moving-coil speakers. Shows remarkably clear pictures 10 ft. wide at a distance of 70 ft. Gives splendid volume **£135 : 0 : 0**

'138' FILMOSOUND

Complete in one case. In use, the combined projector and amplifier unit is removed from the case, while the cover serves as the baffle for the self-contained loud-speaker. Two models, the 138A, with 500-watt lamp and two film speeds (for silent or sound films), and the 138B, with 750-watt lamp, with sound speed only **£138: 0 : 0**

KODASCOPE Model 'D'

The family projector. Gives brilliant pictures up to 40 × 30 in. 300-watt lighting. Takes 400-ft. 16-mm. films. With resistance and accessories ..... **£25 : 0 : 0**

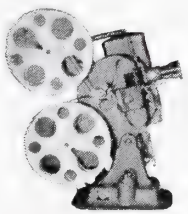
Nine monthly payments of 58/4.

ADVICE AND DEMONSTRATIONS

The models on this page only give a remote idea of what we have in stock. Any latest talkie or movie outfit or enlarger can be seen in our demonstration rooms. You have the opportunity to compare them *all* at Bond Street before deciding to purchase. Expert, unbiased advice willingly given. Other talkie outfits not shown here include De Vry, Marshall, etc.

COMPREHENSIVE FILM LIBRARY

Every latest title in 9.5 and 16 mm. silent and 16-mm. sound-on-film is included. Hundreds of new films (exclusive to Wallace Heaton customers) have just been added. The selection is the greatest you will find anywhere to-day. It is just as cheap to order them by post as at our counter, because the time taken in transit is deducted from hiring charge. Why not take advantage of this fine entertainment aid ?

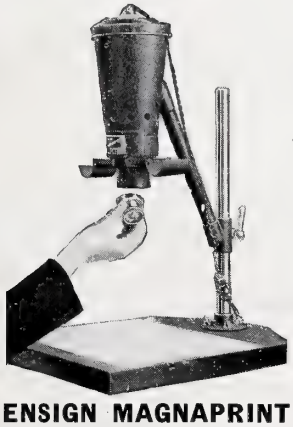


SEND FOR NEW FREE LISTS

Our stocks are so large and varied that we have a separate special free list or each speciality. These include : Film Library, Home Talkies, Home Movies, Enlargers, Miniature Cameras, Accessories, and Guaranteed Bargains. Any or all the lists you require will be sent free on receipt of 2d. postage. Send at once and choose just what you need at your leisure.

EASY TERMS & EXCHANGES

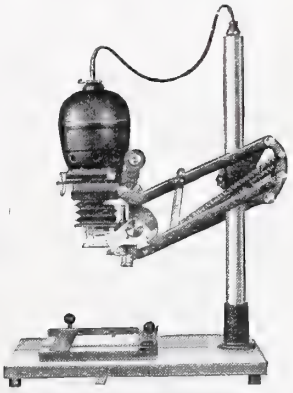
Anything on nine equal monthly instalments. First payment secures the goods, without any personal questions or harsh formalities. We also make generous allowances on your used apparatus in part payment for your fresh purchase.



. . . and you do BEST OF ALL at WALLACE HEATON'S

16-mm. KEYSTONE

2-in. large-aperture projection lens, motor drive, forward and reverse. Special device for stills, 500-watt lamp, fitted super optical system for added brilliancy ..... **£25 : 0 : 0**



Nine monthly payments of 58/4.

ENSIGN MAGNAPRINT

With condenser-diffused lighting system. Fine focussing is assured with the helicoidal lens mount. Lamphouse of light metal with enamel heat-resisting lining. For all miniature negatives, for use with your own Leica lenses. Has special carrier to take 35-mm. film strips ..... **£4 : 10 : 0**

Nine monthly payments of 10/7.

FOCOMAT II ENLARGER

The latest Leitz enlarger for 3¼ × 2½ or Leica negatives. This instrument is completely automatic. With 1/4 Elmar 9.5-cm. lens ... **£50: 12: 6**

Nine monthly payments of £5 18s. 2d.

We have every enlarger in stock, including Praxidos, M. & W., Exakt, etc., etc.

Making "Light" of Photography at Night

More and more photographers are discovering that the advent of winter does not end the photographic season—but it is the time when new and different subjects become available.

With Selo Hypersensitive Panchromatic Roll Film or Ilford Hypersensitive Panchromatic Plates in the camera, effective outdoor night pictures and pleasing indoor studies are easily obtained.

free

A **28** *page booklet "Night Photography — Picture Making at Night—Indoors and Out," tells you how. Write for copy mentioning this paper.*

A 'New Deal'

for Amateur Photographers

How the above picture was made: 3 "Photoflood" Lamps in "Kodaflector" Reflectors were used as shown in diagram. Exposure: 1 sec. f11 on Kodak S S Pan Film.

Photography made easy at times when it used to be difficult and in places where it used to be impossible; placed on an all-through-the-year, all-round-the-clock basis; given the freedom of the home as well as of the field and beach — it is not too much to say that the introduction of Kodak Super Sensitive Panchromatic Film and the Kodak Night Photography Aids has meant a completely 'New Deal' for everyone with a camera. Have you taken advantage of them yet?

See your Kodak Dealer about the "Photoflood" Lamp (2/6); the "Kodaflector" Reflector (3/-); the "Kodaflector" Outfit, including Reflector, Stand, and 9 ft. of flex (7/6).

"MINIATURE" CERTAINTY

We *have* known a miniaturist to go elsewhere for a certain accessory and get it at once, but that was a thousand to one chance. Isn't it best to make straight for the dealer who you know has the goods, and be on a certainty? Our miniature stocks and service facilities are unequalled—we are the original miniature specialists—our staffs know and use miniature cameras and can give you vital first-hand information.

AN EXCLUSIVE SERVICE

If you want the finest possible results send us your films for development by our "MICROLUX" and "INDIVIDUAL" Systems.

MICROLUX yields the finest grain of all, but requires that films be over-exposed.

Films processed in this way receive the most careful handling possible.

Price, per 36-exposure strip, **4/6**
18 exposures (35-mm.), **3/6**

Ask for descriptive MICROLUX leaflet.

WALLACE HEATON'S

OPEN COMPETITION

FOR GOOD PHOTOGRAPHY—ANY SUBJECT —BY ANY AMATEUR—WITH ANY CAMERA!

If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

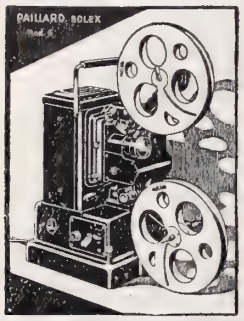
An exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners.

£25 **FIRST PRIZE**

COUPON *which must be affixed to the back of each entry.*

WALLACE HEATON LTD "OPEN COMPETITION"

November 4th, 1936.



21/- **WEEKLY PRIZE**

While we do not guarantee to return prints, every endeavour will be made to do so when they are accompanied by suitably stamped envelopes.

Correct Exposure

CORRECT STOP

CORRECT DISTANCE

Upon these three factors, especially in night photography, depends the perfect photograph.

Every doubt on all these points is removed by the Contaflex, in which is incorporated the following technical necessities for good photographs under difficult conditions :

- Built-in photo-electric exposure meter.
- Special type focussing screen compensated for parallax, showing an image double the negative size and giving a brilliant image even in the corners.
- Interchangeable Zeiss lenses, apertures up to the Sonnar f/1.5—focal lengths up to $5\frac{3}{8}$ in.—all indicating the depth of focus at any given lens stop.
- Metal focal-plane shutter with speeds from $\frac{1}{2}$ to 1/1,000th second.
- Delayed-action shutter release for self-portraits.
- Albada sports view-finder.

The only miniature (24×36 mm.) reflex possessing the above features.

Contaflex

Write for copy of a new Zeiss Ikon publication, "Unfettered Photography," dealing with all Zeiss Ikon miniatures. We shall be pleased to arrange with your local dealer to demonstrate the Contaflex to you without obligation.

VOL. LXXXII. No. 2504.

TOPICS of the Week

A GREAT number of our readers who use miniature cameras will welcome the new feature appearing for the first time in this issue and devoted to their special needs. It is a subject that invites endless opportunities for discussion and will provide a vast amount of matter useful to a steadily growing section of amateur photographers. Our principal difficulty will be in the selection of a weekly instalment of matter that will appeal to the greatest number. It is in this respect that our readers who are "miniature" minded, either in theory or practice, can help by suggesting subjects that need attention, and by queries that will call for useful replies of general interest. In any case we shall be glad to hear from them with any helpful criticism of "Miniature Camera Notes."

Fine-grain Developers.

Fine-grain developers, like miniature cameras, are no novelty. Looking through an old "Photographic Annual" recently, we came upon the following:—

"*Thickened Developer.* Said to give negatives with fine grain, softness, and freedom from halation. Add 1 oz. of golden syrup (treacle) to every 2 oz. of developer. This will increase the time of development 50 per cent. Dish requires constant rocking. A developer specially recommended for this method is: Metol 3 grs., hydroquinone 12 grs., sodium sulphite cryst. 50 grs., sodium carbonate cryst. 100 grs., treacle 2 oz., water 4 oz." We have not tried it ourselves, and will positively refuse to accept any responsibility for its behaviour. But if there is any sweet-toothed miniaturist among our readers who would not mind getting his fingers sticky in the hopes of finding a super fine-grain developer, we heartily wish him luck.

AWAY TO THE NORTH.

A fine study of smoke and action, taken at a London terminus. See article on "Railway Photography" in this issue.

A Good Word for the Manufacturers.

Manufacturers get so many kicks and suffer so often for faults that are not their own, that it is pleasant to record a statement which was made in public recently, not by a manufacturer, but by a grateful client. The speaker was comparing the jewellery trade with the photographic, and he said that in the jewellery trade the purchaser paid for the name; in the photographic trade he did not. What he paid for in the photographic trade when he bought the goods of a reputable house was the great care exercised in manufacture, the rigorous inspection, and the relentless discarding of the inferior article. Some manufacturers, of course, work to price and adjust quality thereto; others work to quality and then fix the price. Refinements and patents have to be paid for, and in the case of goods from abroad the payment of duty and depreciation of currency have to be taken into account. These many factors account for the puzzling nature of prices which confuse the very elect.

The Amateur Film.

The advance in amateur film-making is most marked. Probably in no other department of photography is progress being made at such a pace. We saw the other evening a series of short films, all the work of amateurs, and some of them in Dufaycolor or Kodacolor. All except one, which showed a lack of what might be called a sense of cinematics, so that one had the

irritating feeling of opportunities presented by unusual subject-matter being missed, were first-rate. Some were natural history subjects, notably a colour film by Mr. and Mrs. Ridley, who with infinite patience and skill, at Wicken Fen in Cambridgeshire, had traced the life-history of the swallow-tailed butterfly. The pretty caterpillar, the curious chrysalis, the gorgeous butterfly emerging for its ten-day life, made a really dramatic picture. It is evident that workers using colour films are paying very great attention to the question of exposure, and the films please not only the eye of the man interested in the several subjects, but the more critical eye of the photographer interested in a faithful rendering of nature.

Photographic Reversal Processes

A very scientific communication from the Department of Physical Chemistry at Cambridge was made to the last meeting of the Royal Photographic Society. It concerned the border effects associated with photographic reversal processes. If a plate is exposed and partially developed, and is then exposed again to diffused light and redeveloped, a partial or complete reversal of the image takes place. This is the well-known Sabattier reversal. The second image which develops up has been shown to be a positive, and the final appearance of the plate depends on the relative strengths of the positive and negative images in the same film. Thus, if the first exposure and development are fairly full only the image of the shadows will be reversed. The authors of this communication, Mr. G. W. W. Stevens and Mr. R. G. W. Norrish, said that the borders formed in these partial reversal processes were produced by the spread of the Sabattier or other reversal beyond the limits of the image. The mechanism of this spreading was primarily the process of scattering of light in the films—what they called diffusion halation. Secondary effects, due to restraining of the second development by products of the first, may reinforce the border effect in some cases. They concluded that the production of the Sabattier effect itself is primarily independent of the formation of potassium bromide or oxidation products in the film.

"The Amateur Photographer" EXPOSURE TABLE—*November*

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured, or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m. double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

Subject.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies	1/20 sec.	1/30 sec.	1/60 sec.	1/80 sec.	1/100 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/10 ,,	1/15 ,,	1/30 ,,	1/40 ,,	1/50 ,,
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/4 ,,	1/6 ,,	1/12 ,,	1/15 ,,	1/20 ,,
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/3 ,,	1/4 ,,	1/10 ,,	1/12 ,,	1/15 ,,
Buildings or trees occupying greater portion of pictures	3/4 ,,	1/2 ,,	1/4 ,,	1/5 ,,	1/6 ,,
Portraits or groups taken out of doors, not too much shut in by buildings	2 secs.	1½ ,,	1 ,,	1/2 ,,	1/3 ,,
Portraits in well-lighted room, light surroundings, big window, white reflector ..	6 ,,	5 secs.	3 secs.	2 secs.	1½ ,,

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Choosing an Enlarger

While the choice is less wide than is the case with cameras many photographers are puzzled at the variety of enlarging apparatus offered. The matter of choice is dealt with in this article, with regard to individual requirements.

IN these days, when most photographers make small negatives, enlarging apparatus of some kind is an essential item of equipment. At the present time there is a great variety of such apparatus available, and, as with the choice of a camera, the photographer of limited experience needs a little help in selecting the instrument best suited to his needs.

There are two main types into which present-day enlargers may be divided. There is the high-speed vertical enlarger, the more expensive models of which are fitted with an automatic focussing arrangement and a large-aperture lens.

The projector-head slides up and down a vertical pillar, the image being projected downwards on to a large board. This usually carries a paper-holder of some convenient kind, and serves, in addition, as the base upon which the whole enlarger stands.

The horizontal enlarger is built rather like the optical lantern used for the projection of lantern slides. The place of the screen is taken by an easel upon which the paper is pinned. This easel is in most cases structurally separated from the enlarger itself, the two being brought close together for making small prints, and separated more widely for big enlargements.

This is a general description of the two types of enlarger, but it will be understood that there are minor differences between different models of the same type. For example, some models rely on a condenser for even illumination of the negative, while others dispense with this and secure the same end by means of a diffuser. In some instruments the two systems are combined, a collecting lens being used in conjunction with an opal bulb or other source of diffused light.

Vertical Enlargers: Advantages and Limitations.

The photographer may find that the vertical enlarger has points of special advantage in his particular case. They are generally more compact than the horizontal type, and may be operated in a rather smaller space, an advantage when dark-room accommodation is limited. The fact that many of these enlargers are of the automatic focussing type is also an advantage to those photographers whose vision is not of the best, and who find a difficulty in focussing. The setting of a scale determines the size of the enlargement, sharp focus being automatically maintained no matter how the size may be varied.

These enlargers are limited with regard to the largest print that may be made, although in most cases this is in the region of 15 × 12 inches, a size sufficient for most purposes. Fitted with a large-aperture anastigmat lens, exposures are very short, making it possible to use the slower or chloro-bromide papers for the purpose of enlarging.

Horizontal Enlargers.

While the vertical enlarger represents the latest development in enlarger design, there are still many photographers who prefer those of the older type. They are rather lower in cost, and the size of the picture that may be made with an enlarger of this kind is only limited by the dimensions of the dark-room and by the size of the bromide paper. There is also considerable facility for the control of the projected image, in the matter of masking or local shading during exposure.

In addition, these enlargers have sufficient extension of bellows to allow of their being used for reduction. This latter is a valuable feature if lantern slides are being made from quarter-plate or larger negatives. In their best form these enlargers are also provided with a carrier that permits the negative to be displaced from the vertical position. This is useful for the correction of vertical lines on the negative which converge owing to the camera having been tilted when exposing.

Lighting Systems.

It is most important that the negative should be evenly illuminated. As already stated, this is done by means of a condenser, the latter collecting the light rays from the illuminant and sending them forth so that the margins of the field are as evenly illuminated as the centre.

In other cases this is done by means of a system of reflectors. Both of these systems have their claims for consideration.

The condenser system offers the advantage of high speed, and reduces exposure. The diffuser is kinder to small blemishes on the negatives, as well as to hand-work or retouching, the latter being less in evidence. In one or two models the two systems are combined, with the result that the advantage of high speed remains, while the reproduction of small blemishes, hand-work, or grain in the negative, is avoided.

The Lens.

As with the camera, the optical quality of the lens is of the first importance. The finest definition in the negative can be lost by the use of an objective of indifferent quality. Many photographers are not aware of the importance of a good lens, as is evident by the number of enlargements that exhibit poor definition. If the photographer is possessed of a good lens on his camera, it is generally possible to use the same instrument on the enlarger.

Illuminants.

In most cases an electric lamp of the pearl type is employed for enlarging, but where, as in country districts, electric current is not available, the photographer has to consider other light sources.

Incandescent gas is quite suitable for horizontal enlargers, but not all the vertical models are adapted for it. The same applies to spirit vapour and acetylene gas.

Miniature Enlargers.

The user of a miniature camera will find that by employing an enlarger built for the size of negative used work will be enormously facilitated and the final prints will be better. It is true that an enlarger of quarter-plate size can, if necessary, be used for miniature negatives, but big enlargements will be difficult or even impossible to make. In a vertical enlarger the upright pillar will not be tall enough to give the high degree of magnification required, while the size of the dark-room may set a similar limit when using a horizontal enlarger. Further, there is some difficulty in seeing the image on the easel when the apparatus and the easel are separated by the great distance necessitated by the use of a large apparatus for small negatives.

PHOTOGRAPHING FIREWORKS

A Seasonable Topic

By A. L. M. SOWERBY.

THE photography of fireworks is probably the easiest branch of night photography, the reason being that in most cases the firework is quite reasonably bright, and it matters very little if almost nothing else is shown on the negative.

The most attractive subject of this kind, and the easiest to photograph, is a big public display, such as those frequently given at the Crystal Palace. At first sight it might seem that high shutter speeds are called for, owing to the rapid movements of such things as rockets, Roman candles, and the like. But a strictly instantaneous photograph of a fireball from a Roman candle would show only a point of light on the negative, whereas the eye appreciates the path of the ball as a whole, and the graceful curves that it traces out in its flight are one of the major attractions of the firework.

The whole path of the ball can be shown on the negative by leaving the shutter of the camera open during the whole time that the firework is in action, and the resulting picture gives a very fair interpretation of what the eye actually sees.

To photograph fireworks, then, the camera has to be on a stand and focussed usually on infinity. The lens is left open until it is judged that enough fireworks have been discharged to make an impressive display in the finished picture. They will appear simultaneous though actually they may have been discharged in succession.

This procedure is particularly effective with rockets. These are inclined to be difficult to photograph on account of the great height to which they fly. Unless the camera is situated at a very considerable distance from them the graceful curve at the top of their flight and the flare and splash of their bursting is very liable to be off the film.

If it is impossible to get far enough away to include the whole trajectory of the rockets, similar pictures may be obtained of Roman candles, which throw their fireballs to a much lesser height.

At still closer quarters one of the big set pieces of the public display may be photographed, but for these long exposures are not desirable. One reason for this is that many of these set pieces move (boxers, fighting cocks, etc.). Also the clouds of smoke they evolve look very well as they are illuminated by the light from the firework, and if an exposure of much more than a quarter of a second is given, billowing smoke will be reproduced as a formless blur.

A garden display.

It is difficult to give more than the vaguest suggestion as to the correct exposure for such subjects. After all, Guy Fawkes' Day comes only once a year so that it will not be too extravagant to use plenty of film, giving exposures varying from perhaps 1/20th of a second at f/4.5 to one second at the same stop.

Home fireworks in the back garden are more difficult to photograph owing to the photographer generally being too near to be able to include the flight of rockets or even Roman candles. The smaller fireworks, such as catherine wheels, jumping crackers, squibs, etc., which form the mainstay of most home displays are not very good photographically. A jack-in-the-box, given an exposure lasting from the first lighting to its explosion, makes a fair subject; so also are golden rain and such "short-throw" fireworks. These may be given half a second or less at full aperture.

A more ambitious subject is to photograph the young operator by the light of his golden rain. Even with ultra-fast pan. film and an exposure of 1/8th to ¼ second, a very wide aperture will be needed.

The development of the negatives, since they are of such furiously contrasty subjects, should, if possible, be done with a soft-working developer. In any case, the time of development should not exceed two-thirds of that which the particular film requires if used for ordinary subjects.

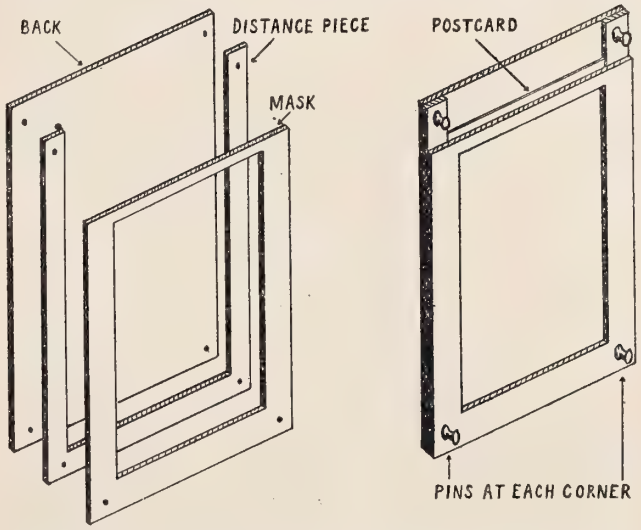
If ordinary M.Q. or Pyro is used, the negative should be slipped into cold water for two or three periods of a minute or two each during development. The finished negatives will be hopelessly disappointing to those unaccustomed to photographing such subjects, but remember that a night photograph must never be condemned as a failure until a print has been made. These are usually unexpectedly good.

At the Crystal Palace.

Readers' Hints, Tips and Gadgets

AN ENLARGING TIME-SAVER.

PROBABLY seventy-five per cent of the enlargements turned out by most amateurs are made on the smaller sizes of paper of about postcard or half-plate size. A great deal of time is wasted in pinning these small sheets to the easel, and each print must afterwards be trimmed to remove the holes made by the pins. The simple holder described here will obviate these troubles and at the same time it has several other advantages.



The holder embodies a mask which gives the prints a white margin all round, minimising waste and ensuring a neat finish. It can be moved instantly to any position on the easel so that any desired part of the picture can be selected for enlarging. This is a great advantage and avoids the need for rulings on the easel. Such rulings are of little use with the simpler types of enlarger where the negative carrier is not provided with centring adjustments.

It will be seen from the drawings that the holder is made from three pieces of cardboard glued together and fitted with pins at each corner. The back is best made from a thick piece of mounting board with a smooth white surface, so that it can be used for focussing upon. It should be about $\frac{1}{2}$ in. larger all round than the enlarging paper or postcard. A suitable size for postcards would be $6\frac{1}{2} \times 4\frac{1}{2}$ in.

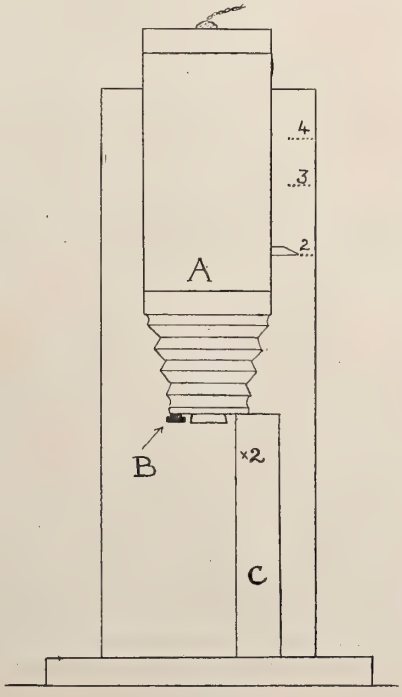
The distance-piece which holds the cards in position should be the same size as the back, and about twice as thick as a postcard. It must be cut away to a U-shape as shown in the drawings. The exact size of the part to be cut away can be got by tracing round a postcard (or other size of enlarging paper). The margin at the foot can be about $\frac{3}{8}$ in., and around the sides about $\frac{1}{2}$ in.

Any piece of good smooth card can be used for the mask. It should be the same width as the other pieces, and about $\frac{3}{8}$ in. shorter. A rectangle is cut away from the centre, leaving a sufficient margin all round to give the prints a white border of $\frac{1}{8}$ to $\frac{1}{4}$ in. in width. The top margin of the mask should be about $\frac{1}{4}$ in. in width and arranged to allow the prints to project about $\frac{1}{8}$ in., so that they can be easily withdrawn.

After gluing the three pieces together push-pins are inserted at each corner and glued in position, leaving the points projecting about $\frac{1}{8}$ in. at the back. This allows the holder to be fixed in any position by merely pressing it against the easel.

A neat finish can be given by painting the mask black. This also allows one to see at a glance the exact size of the printing paper.

A. HARCUS CUTT.

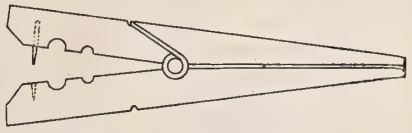


"AUTOMATIC" ENLARGER FOCUSSING.

THE following notes and diagram will show how a vertical enlarger of the type illustrated can be readily made almost self-focussing, with little more trouble than that occasioned by an hour's careful measurement.

The enlarger described is focussed by raising the lantern (A) bodily, a clamp being provided for fixing it to the vertical support at the back, and then turning the knob (B) until the image of the illuminated negative is sharply defined on the baseboard.

If an old negative with fine lines ruled on it, one or two inches apart, is used in the carrier, it will be a simple matter to decide the correct positions of the lantern and lens panel necessary to give any specific degree of enlargement. If then a pointer is fixed to a suitable place on the lantern or its carriage, and a scale of magnifications is engraved on the vertical support as shown, the correct position for the lantern for any required magnification may afterwards be easily found. To obtain the corresponding lens setting, a strip of metal or wood is cut so that when the lens panel is resting on the strip (C) as shown, the image is sharply focussed. The strip is clearly marked with the degree of magnification for which it is to be used, and is slid out of position before printing is started.



It is advisable to arrange that the pointer on the lantern shall run as close as possible to the scale to avoid error due to parallax, and it is essential that the same negative carrier shall be used as was employed to calibrate the instrument. Since woodwork is unfortunately influenced to some extent by the weather, it is as well to check the settings periodically, but no great trouble need be anticipated. No claims are made that a precision enlarger may be obtained by the above method, but certainly considerable fatigue may be avoided in the dark-room by using such a device for focussing.

M. L. HASELGROVE.

FILM CLIPS.

WET prints, and even more wet films, are so slippery that they are very liable to slip out of wooden clips. This can be prevented by inserting a gramophone needle in the jaws of the clip in the way shown in the drawing.

The usual needle is rather too long, and must be broken in half. This is done by gripping half the needle in a vice, and tapping the projecting portion with a hammer, when it will break off close to the vice. The shortened needle is then pushed, point outwards, into a small hole drilled in the clip.

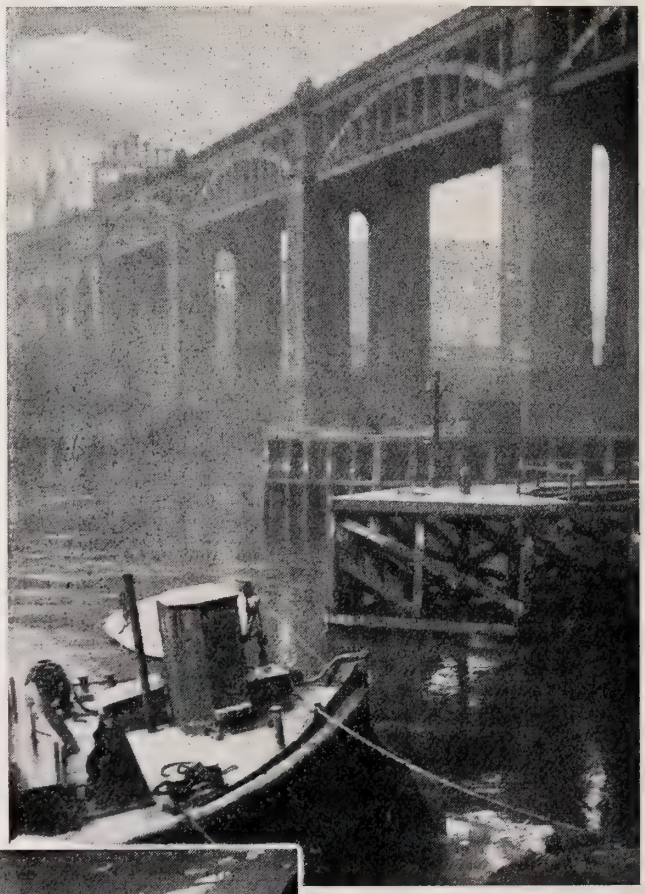
A. LOVEYGROVE.

RAILWAY

By CHRISTOPHER WENLOCK.

Sunlit Smoke.

RAILWAY photography can be undertaken by the amateur at all times of the year, although high-speed pictures of express trains are perhaps more easily obtained in the summer-time when the light is at its best, but there are many other fine subjects available besides these.



There is perhaps no richer hunting-ground for the photographer in search of pictures than the entourage of the railway, whether it be along the open line, in the goods yard or at the station; and both the scenery itself and the actors in the play are continually changing, thus presenting an infinite variety of subjects.

One of the most beautiful and effective features of the railway is the smoke or steam belching from the funnel with its wonderful formations and the play of sunlight upon it. With the rapid conversion of our lines to electricity for motive power this feature will gradually disappear, so that one should not lose an opportunity of securing real pictures from this source.

Trains in motion along the main lines, not necessarily expresses, afford many a picture, particularly if at the selected spot there be an incline in the line. Then greater power is required and there is a proportionate volume of smoke.

For this work it is well to choose a sunny day and select a suitable spot along the line where the background is pleasing, and suitable objects such as signals or a distant station fit into the picture harmoniously; and where there will be no wires or other paraphernalia to interfere with the composition.

It has been frequently stressed that for approaching objects, the nearer one can be in the direct line of approach the less chance there will be of apparent motion on the film. On the other hand one must be far enough from the direct line to secure a good side view of the train itself.

Over the River.

Sunshine at Liverpool Street Station.

Modern ultra-rapid plates and films make the photography of moving objects a simple matter, where a few years ago it would have had to be ruled out as impossible, or at least doubtful, during the autumn and winter months.

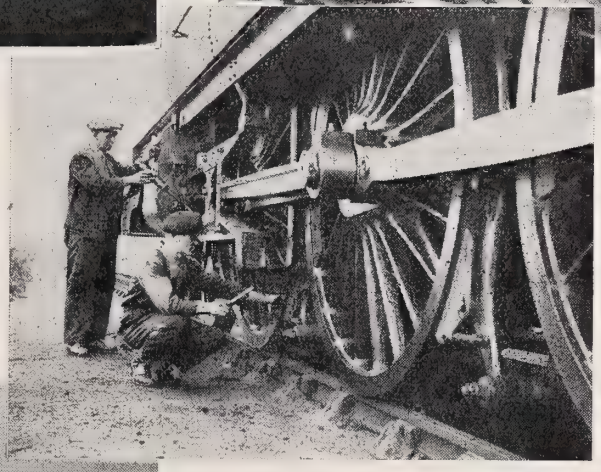
At the same time, for this work a stand camera is a very great advantage. One is then able to have the exact spot fixed, the camera focussed and everything in readiness for the exposure directly the engine has reached the predetermined position. With a hand camera, and the necessity of watching

Photography

the moving train in the finder, the chances are that one will be just too soon or just too late, and a disappointment will result.

On the platform of the station there are many choice pictures on a sunny day. Signals, water tanks, barrows, almost anything, can be turned to pictorial account, particularly when the train, with its contribution of smoke, enters the scene.

A train just emerging from a tunnel into the blazing sunlight with a cloud of steam is worth waiting for; and railway photography must be done with a time-table for consultation.



A Railway Silhouette.

Sunlight streaming in slanting rays from the glass roof of a terminus has provided many an exhibition print. The subject is far from easy, owing to the general activity of the crowds and the uncertain light, but a watchful eye to detect the right combination of factors will mean a welcome prize.

In the goods yard much interesting work may be done; but here there is little chance for stand work, and the reflex or miniature comes into its own. As the pictures will mostly be "movies" a sunny day is essential; and a quiet ramble about the yard will be sure to suggest topics.

Off the Rails.

Preparing for the Trip.

A Record-Breaker.

One must be careful not to let the men see that they are about to be photographed, or they will oblige the photographer by posing in the most becoming attitude; which, needless to say, will utterly ruin the pictorial quality of the print. Pose is fatal; natural movement gives life. It may often be necessary to practise a little harmless deceit and allow the men to suppose an exposure has been made; then, when they bend again to their tasks, the desired photograph may be obtained.

Some very choice close-ups of engines, of the engineer attending to the wheels, oiling and so forth, are to be seen in our exhibitions; of children in pleasing attitude beside piles of luggage, in conversation with railway men, and so on. These suggest the amazing possibilities in this line of photographic activity; and, since many of these opportunities occur when least expected, the wise camera-man will always carry with him at least a pocket camera. This he must know so intimately well that he can use it without fumbling, and almost without thought. With a fast lens, a fast film, and a quick eye, there should then be no danger of missing what may be the prize of a lifetime.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Annual Dinner of the Royal Photographic Society will be held at the Monico Restaurant, Piccadilly Circus, W.1, on Tuesday, November 10th, 6.45 for 7 p.m. Tickets 10s. 6d. each are obtainable from the Hon. Dinner Secretary, Mr. R. H. Lawton, 311, Thorold Road, Ilford, Essex, or from the Secretary, R.P.S., 35, Russell Square, W.C.1.

Messrs. Ensign, Ltd., of High Holborn, have just published three booklets under the following titles: "Optiscope Projectors for all Purposes," "Simple Lighting Equipment for Amateurs," and "The Fascinating Art of Enlarging." These give full details of the apparatus offered for these three purposes under the name of Ensign, and will be sent on request to any amateur who is interested.

An informative little booklet, dealing with the construction of the "Sixtus" and "Ombrux" photo-electric exposure meters and their capabilities, has just been issued by Messrs. J. H. Dallmeyer, Ltd., of 31, Mortimer Street, London, W.1, the sole distributors of these meters in this country. A copy of the booklet will be sent free to any reader of "The A.P." on application to the above address.

We have received from Messrs. Ilford an interesting and comprehensive booklet dealing with the use of Dufaycolor film in artificial light. It gives information as to the choice of filter in artificial light of various types, it being necessary, for correct colour reproduction, to have a filter suited to the particular light in use. The book also gives very complete instructions for the accurate determination of exposures with the aid of a photo-electric meter, together with numerous examples of practical interest. The choice of lens aperture when using flash-bulbs is also dealt with.

Conforming in general make-up with *The Amateur Photographer* Diary, already reviewed in these pages, but dealing specifically with their own particular interests, *The Autocar*, *The Motor Cycle* and *The Wireless World* Diaries are now on sale from Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1, at 1s. 6d. each.

A new Bargain List has just been issued by the City Sale and Exchange, 54, Lime Street, E.C.3. It contains details of end-of-season clearance of Cameras, Home Cinés, Enlargers, Binoculars, Microscopes and Sundries. Readers in search of bargains in apparatus, etc., should send for a copy which is sent free on application to above address.

On Sunday next, November 8th, the Southern Railway Photographic Rambling party is visiting the woodlands near Arundel and Midhurst, where the autumn tints are now at their best. The special train leaves Victoria at 9.50 a.m. and returns at 9 p.m. The return fare is 4s., and the leader is Mr. A. E. Daly.

Lost!! Probably in the bus between The Elephant and Castle and Herne Hill. Rolleiflex No. 31381, in leather case, which also contained Rolleiflex lens hood and filter. (Lens, Tessar No. 989599.) If any reader is able to assist in tracing the camera will he communicate with Mr. J. H. Hole, 163, Northbrook Street, Newbury, Berks.

An award of 21s. has been made to Donald G. Sheldon, 526, Inglemire Lane, Hull, for the winning print in the Wallace Heaton Weekly Competition. Full particulars of this competition appear regularly in our advertisement pages.

We are advised that the new secretary of the Cheltenham Camera Club, formerly the Cheltenham Amateur Photographic Society, is Mr. W. R. Bawden, 11, Southern Road, Leckhampton, Cheltenham. This year a special series of demonstrations and informal lectures for beginners is being given.

The number of modern "all-wave" wireless receiving sets now available have brought a new zest to listeners. These enable large numbers of really short-wave stations to come in. As it is not easy for many people to identify many of the ultra short-wave stations, the issue of *The Wireless World* dated Friday, October 30th, fills a decided want. It is a Special Short Wave Number, and not only gives all necessary data concerning short-wave stations, but full particulars of all short-wave receiving sets now available.

The Coronet Camera Company, of 310, Summer Lane, Birmingham, 19, have just produced an attractive leaflet giving information concerning the use for winter photography of the Perutz films, for which they are sole British agents. This leaflet will be sent free on request to any reader.

Exhibitions and Competitions — CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in the issue of October 28.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

Lincoln Camera Club.—Open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

Third Canadian International Salon of Photographic Art.—Open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

IV International Hungarian Exhibition.—Open, October 24–November 9. (Secretary, Magyar Amatörfényképezök, Orsz. Szövetsége, Budapest VII, Erzsébet-körut, 9, Hungary.)

Eighth International Photographic Salon of Japan.—Open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi, Shimbun, Tokyo, Japan.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

Wray Park Studio (Reigate) Third Annual Exhibition of Enlargements made from local amateurs' films. (Windmill Galleries, High Street, Reigate), November 3–7, open 10 a.m. to 7.30 p.m.

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs.—Open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Borough of Ealing Public Libraries Photographic Exhibition and Competition.—December 9–10. Open to all residents in the Borough. (M. L. Hodges, Librarian, Hanwell Public Library, London, W.7.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15; open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Entries, November 18; open, November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Entries, December 15; open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

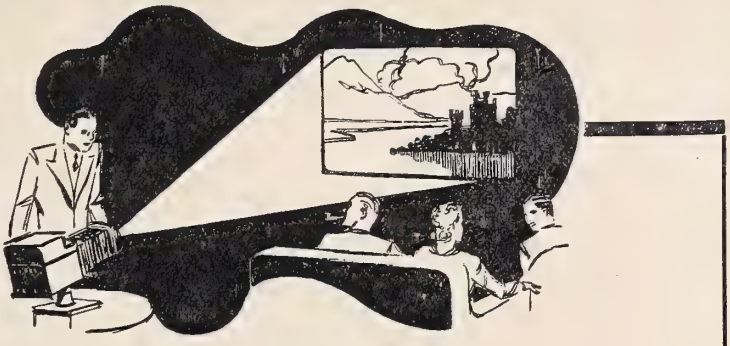
Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

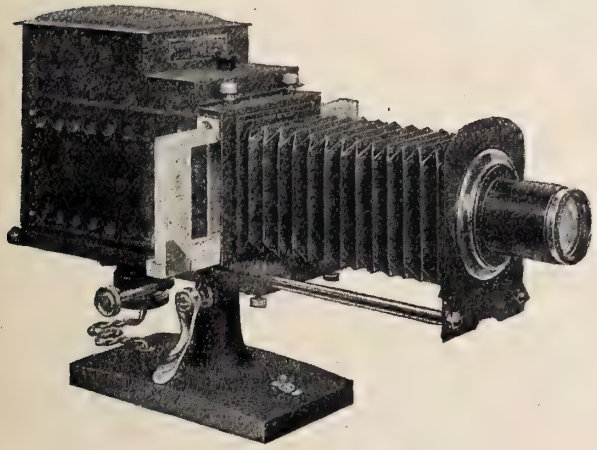
Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

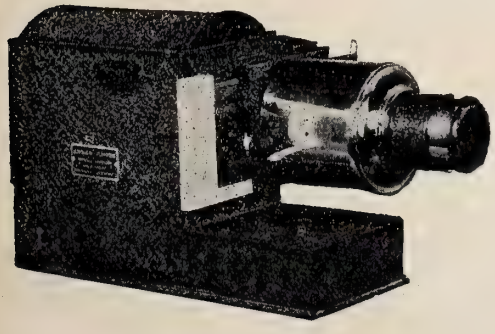


IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)



Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.)



Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1, open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Lantern Slides reveal all the beauty in your pictures . . .

ENSIGN OPTISCOPE Model 6A.

ENSIGN LANTERN.

Project them with an

ENSIGN OPTISCOPE

You will be surprised at the beautiful effects that are obtained by projecting your pictures with an Ensign Optiscope. Your friends will appreciate them so much more than looking through your album. With the Ensign Lantern-slide making outfit you can make a lantern slide as easily as you can make a contact print.

ENSIGN OPTISCOPE Model 6A

Equally suitable for black-and-white or coloured (Dufaycolor) pictures mounted as slides. For use at home or in small halls. Takes 250 or 500 watt lamps. In handsome fibre carrying-case, and including slide carrier and all necessary leads and plugs (without lamp).

With **ALDIS UNO** Projection Lens, 8 or 10 in. focus ..... **£8 : 10 : 0**

ENSIGN LANTERN

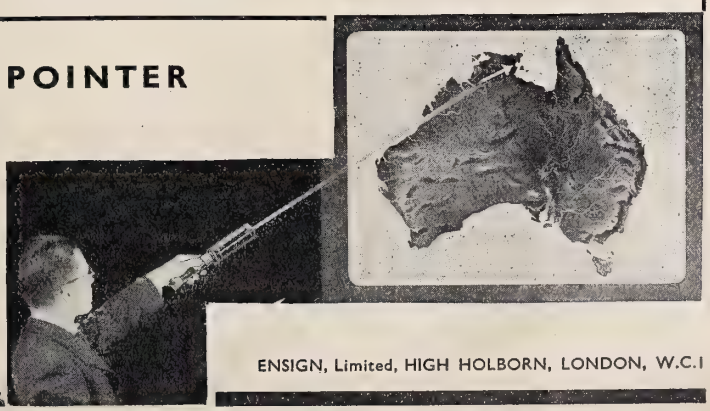
A well-made lantern for home lectures and entertainment. Double achromatic lens, 6-in. focus, in focussing mount, 4-in. Plano Convex Condenser, slide carrier. Takes any 60-watt lamp.

Complete in fibre carrying-case (without lamp)..... **£2 : 15 : 0**

ENSIGN LANTERN-SLIDE MAKING OUTFITS

Enable lantern slides to be produced simply and as easily as a contact print. Everything is provided (except actual lantern plates). Printing frame with guides for Leica or Contax Ciné negatives in strip, negative masks and glass, packet of 12 combination cover-glasses and 12 masks for either Leica, 2¼×2¼ or half "20" size. **5/6**

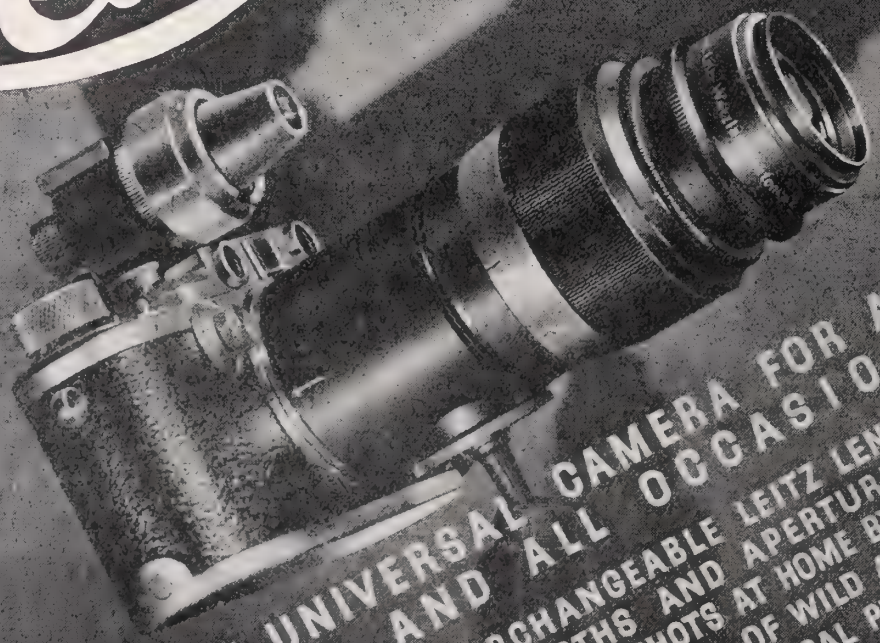
Masking Sets only, **2/6**



Ask your dealer for a copy of "Optiscope Projectors for All Purposes," by Ensign.

ENSIGN ELECTRIC TORCH POINTER

This ingenious device enables a lecturer to project the image of an arrow on any desired point on his picture, so that he need not move from his reading or lecturing position.



BATTERY model, complete with battery, **15/-**

MAINS model, with lead and plug-in transformer. For A.C. mains only, 200-250 volts .. **32/6**

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

Leica

THE UNIVERSAL CAMERA FOR ALL TIMES AND ALL OCCASIONS

12 RAPIDLY INTERCHANGEABLE LEITZ LENSES OF VARYING FOCAL LENGTHS AND APERTURES WILL SOLVE ANY PROBLEM. SNAPSHOTS AT HOME BY ORDINARY LIGHTING; TELEPHOTOGRAPHS OF WILD ANIMALS IN NATURAL SURROUNDINGS; CLINICAL PHOTOGRAPHY. NO TASK IS TOO BIG FOR THE LEICA.

WRITE FOR CATALOGUE OF INTERCHANGEABLE LENSES FOR THE LEICA

Ask any good class photographic dealer for a demonstration or write for descriptive literature to

E. LEITZ (LONDON), 20, MORTIMER STREET., LONDON, W.1.

MINIATURE CAMERA NOTES

Every week under this heading will be found matters of interest to users of Miniature Cameras. Besides short illustrated articles, technical data and formulæ will be given, while reviews of the latest "miniatures" and readers' queries concerning miniature work will also receive attention.

What is a Miniature Camera?

THE common definition of a miniature camera is that it must take a picture of 6×6 cm. (2¼×2¼ in.) or less. Below this upper limit there are quite a number of smaller sizes.

There is for example the 24×36 mm. negative taken on 35-mm. ciné film, the size of which is shown in Fig. 1. Very slightly larger than this is the 3×4 cm. negative, made by subdividing ordinary V.P. size film so as to get sixteen negatives per roll instead of the eight exposures for which it was originally intended.

Cameras of both these two sizes use lenses of 2-in. focus; the larger picture gives the same size image as the smaller, but includes a slightly wider angle of view.

Of the next size larger there are again two versions; some cameras take eight-exposure rolls of 3¼×2¼ film and make sixteen exposures, each 2¼×1¾ in., on each length. A photograph of these exact dimensions is shown in Fig. 2. The corresponding centimetre size used for describing the Continental cameras is 4.5×6 cm., which is nearly ⅛ in. longer than the illustration. A longer, narrower picture is given by cameras using standard V.P. film, which gives eight exposures, each 4×6.5 cm., from each roll.

Both the V.P. and the 2¼×3¼ films are also pressed into service for taking the square pictures which are given by most of the small twin-lens reflexes, and one or two other cameras. Eleven or twelve exposures per roll are obtained, the sizes being 4×4 cm. and 6×6 cm., The corresponding English size to the second of these is 2¼×2¼ in.; it is this that is illustrated in Fig. 3.

The slight discrepancy in sizes between the English and metric descriptions is not large enough to be important; we shall use the metric sizes, which avoid awkward fractions, as representing both.

6×6 cm. is commonly taken as the largest of the miniature sizes and has several times been specified as the largest from which prints may be made for entry to competitions for miniature camera users.

Under this definition a camera taking sixteen exposures on 3¼×2¼ film (picture 4.5×6 cm.) is classed as miniature, whereas a camera taking the usual eight exposures on the same roll is not a miniature. How is one to describe the many cameras that, by the use of a mask to limit the picture area, will take photographs of either size at will?

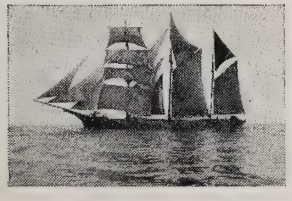


Fig. 1. *Contact print from 24×36 mm. (15/16ths×1-7/16ths) miniature camera negative, using 35-mm. ciné film. The half-size, V.P. film picture is slightly larger.*

Fig. 2. *Contact print from 2½×1¾ (4.5×6 cm.) negative. This is the size obtained from half 2¼×3¼ film using 16 on 8-exposure spool.*

Are they miniature cameras all the time? Or none of the time? Or only when the mask is in position?

If we want to make things difficult, we can even go a step farther. Suppose the mask is left out, or suppose even that the camera never had one. It is still quite usual to take a narrow-angle view which requires, for best composition, to be trimmed down to the 4.5×6 cm. size or less. Is the fact that this picture, indubitably of "miniature" size, is surrounded on the film by more of the same subject instead of by parts of two different ones, going to prevent us from entering the print in a miniature competition?

Fig. 3. *Contact print from 2¼ in. square (6×6 cm. negative, which is the largest size generally admitted as "miniature."*

These difficulties in the way of defining a "miniature camera" have their practical side, too. A recent competition was "open only to users of miniature cameras taking pictures no bigger than 2¼×2¼ in., size or area. Leica, Contax, Rolleiflex, Super Ikonta, Rolleicord, and all such cameras are eligible." We leave the reader to make up his own mind whether a photograph taken with the Super Ikonta of 3¼×2¼ size, used with its mask for 4.5×6 cm. pictures, would be eligible. And whether his entry would have been banned if he had taken exactly the same picture (not more than 4.5×6 cm. in size) without using the mask.

If you try a new film, remember you know neither its speed nor how long it will take to develop. So use the first roll to find out, and the second roll for taking photographs.

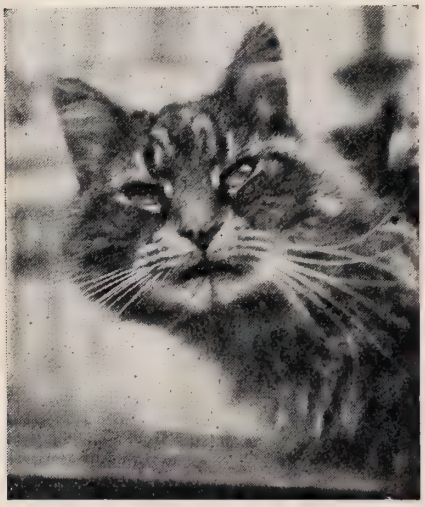
It takes about a tenth of a second to finger-mark a film and about one hour per print to cover up the results. It saves time, therefore, to handle negatives by their edges.

If you use a "three-times" filter, do not multiply the exposure-meter readings by three on that account. Instead, reckon your film as one-third its normal speed, after which the exposure meter will do your sums for you.

Holding a Miniature Camera

By BERNARD ALFIERI, Jun.

LACK of crispness in big enlargements made from miniature negatives is often due to slight camera movement when the exposure was made.



If a heavy bag is carried for a short time, and then the camera is quickly used in the hand, the negative will probably not be sharp at 1/60th sec.

One familiar trouble is the failure to hold the camera steady for long periods. The press photographer suffers acutely in this respect: A picture nearly happens, the camera is raised to the eye, and then there is a wait. After a few seconds the hands will begin to shake, and it is necessary either to risk lowering it again for the muscles to recover, or reckon on a slightly blurred exposure. On the other hand it is often possible to raise the camera and expose at once without camera movement at slow speeds that could not be attempted after a short wait.

Everyone has his own method of steadying the camera. I have heard it said that the best way is to press the elbows well into the chest, but in my case I find that my heart beats, and the harder I press in my elbows the more my arms shake.

Later, I heard a suggestion that the camera could be held for slow exposures with the aid of a piece of string. You stood on one end of the string, or put your foot into a loop, and held the other end on the camera which you attempted to raise against the pull of the cord, of course not forgetting the circumstances when you decided quickly to get a bit closer to the subject.

On the whole, it is difficult to find a better alternative than holding the camera pressed against the face, relaxing as much as possible at the moment of exposure. If a cable release is not employed, pressing the button should be done by supporting the opposite side of the instrument with the hand, pincher fashion.

"Close-ups" with a Miniature Camera

By DAVID CHARLES.

THERE may be many occasions when the "miniature" photographer yearns for the power to get closer still than the three or four feet from his subject that the focussing scale of his camera normally permits. There are several ways in which that can be done, the simplest of which is by means of what are called "magnifiers" or "supplementary lenses."

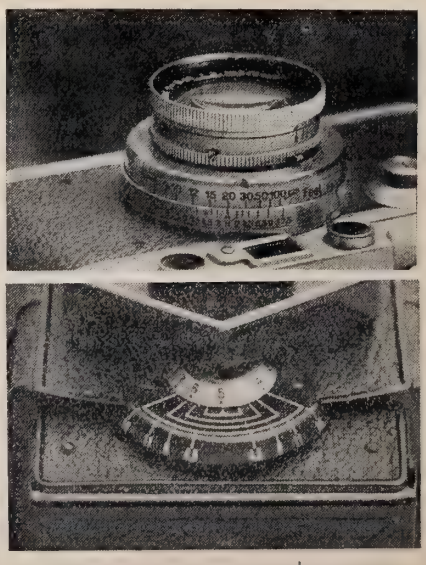
When one of these is clipped on to a range-finder camera, the focussing device is out of operation. Fortunately, one can obtain these "magnifiers" for use at specific distances. For instance, a very useful one is for use at two feet between subject and camera.

To use it the lens is set right back at "infinity," the magnifier is slipped on in front of the lens, and the camera is then placed at two feet from the subject. On a twin-lens miniature reflex camera one must obviously have a pair of magnifiers, and measuring can be dispensed with. I had my pair mounted up together, by cutting circles out of the twin cap and soldering bits of tube (to form lens-hoods) therein. The complete thing just slips on, and there it is. I made the advantageous discovery that by racking the camera out one can focus a still bigger image. The picture of the cat was obtained this way, the first time I tried it out! Stop between f/5.6 and f/8, with 1/25th, and October at that.

Apart from the steadiness required to maintain focus on a fidgety cat's whiskers, it was important to leave a little more "head-room" in the viewfinder when working so close up.

Making the most of the Depth-of-Focus Scale

MANY miniature cameras are now fitted with a depth-of-focus scale, which during focussing allows the nearest and farthest point of sharp focus to be read at a glance.



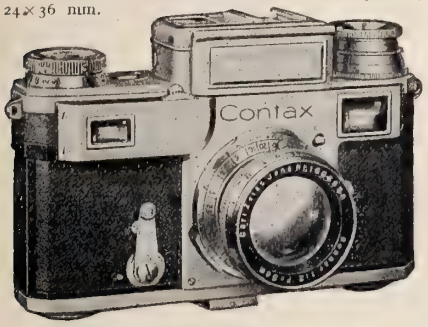
Where a camera is also fitted with a range-finder, it is often our habit to determine the exact focus required for any given object, and if we want the greatest depth of focus, just stop down as far as we dare. Such methods are not justifiable on the modern precision instrument, which provides for a result that can be obtained with certainty.

A typical focussing scale is shown in the accompanying (upper) illustration of a Leica, where the lens operating on a helical screw shows the focus in feet opposite the black arrow. It will be noticed that the lens stops are also engraved round the inner flange, thus if our object is sharp at 20 ft. we can read off the front and back limits of sharp focus for all stops.

But it means much more than this. Supposing our object is 20 ft. away and we wish "infinity" to be sharp also, there is no need to set the focus at the figure 20. The focus should be set with "infinity" opposite the proposed lens stop; for example, if we are working at f/6.3, the focus scale shows us that we are also sharp up to about 18 ft., the actual focus being about 35 ft. and not 20. On this particular lens it will be seen that all distances are sharp at f/12.5 from 9½ ft. to infinity, providing the lens is focussed at 18 ft.

This arrangement is also fitted to several small twin-lens reflex cameras, as shown in the lower illustration.

To understand this simple arrangement is to have the result of careful calculation made easy to apply.



Modern Miniature Cameras

THE "CONTAX" MODEL III

THIS is the latest addition to the series of Contax cameras from the firm of Zeiss Ikon Ltd., and includes further refinements, notably a built-in photo-electric exposure meter, which forms part of the structure of the top of the instrument.

This exposure meter appears to be very accurate in practice, and gives readings in comparatively weak light. It is protected when not in use by a spring metal flap. The front has a series of vanes arranged to restrict the angle of field of the cell. The flap, when open, acts as a sky shade.

The camera in general construction is similar to the Contax II, and has a metal focal-plane shutter giving exposures, T., B. and ½ second to 1/1,250th second. As with all the Contax series the camera takes 36 negatives on one strip of perforated ciné film, which is inserted in the camera with the special spools sold for the purpose. Changing the film automatically sets the shutter for the next exposure. Size of picture, 24×36 mm.

The distance meter and view-finder are combined in one viewing aperture, a feature also of Contax II. The range-finder is of the wedge pattern, and has a base of 4 in., which renders the focussing of near objects very accurate. The distance meter is mechanically coupled to all lenses of focal lengths between 4 cm. and 18 cm. (1-9/16ths in. to 7⅛ in.).

Lenses are interchangeable, and a considerable range is available, from the 2-in. f/1.5 Sonnar to telephoto lenses and thirteen others of a variety of focal lengths. In addition to lenses up to 20 in. (50 cm.) an extreme wide-angle lens (75°) can be used—the Zeiss Tessar f/8 of 1⅛-in. focal length. This lens is not coupled with the distance meter but with it all objects at or beyond 4 feet are in focus and a special focussing scale engraved in feet is provided.

The camera back can be replaced by one taking a plate adapter, by means of which single exposures on plates can be made, and the removable back facilitates the cleaning of the camera.

The Contax III has a built-in delayed-action shutter mechanism, and the shutter and winding knob is very accessible at the top of the camera. The release for the shutter is in the centre of the winding knob, and convenient for the finger when holding the camera at eye-level.

All the metallic outer parts of the camera are chromium-plated, and the entire instrument is a most attractive example of high-class precision work.

The prices of Contax III range from £53 to £78 5s., according to the optical equipment. Further particulars are obtainable from Messrs. Zeiss Ikon Ltd., Mortimer House, Mortimer Street, W.1.

Film is cheap, and good subjects often hard to find. So waste film rather than subjects.

If a subject takes your fancy, photograph it without delay. If you don't, a furniture van will block up the street, or the figure you so liked will disappear into the "Dog and Duck." But if there *is* a better point of view than your first one, find it.

For portraits, use a fine-grain film, and keep at least six feet from your sitter; further, if you want more than head and shoulders. Your picture will by no means fill the film, but it will please the sitter.

HINTS for LEICA USERS

Out-of-focus Images when the Range-finder has shown a Sharp Image.—This is the result of pure carelessness in drawing out the collapsible lens. The lens should be drawn out to the full extent and turned to the right *until it locks*. If drawn out straight and left it may be butting up against the bayonet catches inside the mount without going into the locking slots. A turn to the right will either lock the lens, or if not in the slots will allow the lens to go into the slots and then lock. The lens must always be felt to lock before taking a photograph. This of course applies to the lenses in collapsible mounts.

To Change from one Type of Film to Another Before a Spool is Finished.—First read off the number of exposures made, and then rewind the film until you feel it just release on the winding spool. Do *not* continue to run the winding-knob or the end of the film will vanish into the charger. Open the camera, remove the charger, and write in pencil on the piece of film protruding from it just how many exposures have been made. Then when that particular cartridge is reinserted in the camera, the indicator is set again at 0, and the number of exposures marked on the film are fired off *with the lens cap on*. After that, just carry on as with a fresh film, and the indicator will tell you the total exposures made on that film. In this way also exposures already made can be cut off in the dark-room for development, by allowing 1½ in. for each exposure made plus an extra allowance of eight or ten inches for loading into the camera. Eight exposures will require about 20 in. in all to be cut off, and so on.

A few inches of film should always be left protruding from the cartridge to allow it to be trimmed to the special shape for loading into the camera, and this is best done with the template obtainable from Messrs. Leitz.

Picture Over-exposed and Blurred all Over.—This can arise through giving a slow instantaneous exposure by mistake for 1/20th sec.

On the Model III or IIIa always see that the slow-speed dial on the front of the camera is set back to 1/20th sec. after any of the slower speeds have been used, otherwise the slow speed will be given again as soon as the main shutter dial is set to "20-1."

Vertical Pictures while in the Ever-ready Case.—In taking these, make a practice of inserting one finger under the lid of the case to make sure it is out of the way of the lens. Or a rubber band slipped through the strap at the bottom of the case, drawn round the case and over the fastening flap, will ensure that the lid automatically flies out of the way of the lens on being opened.

The Movable Lever on top of the Camera must always be set to A when putting a film in the camera, and to R only while rewinding.

A photograph of the Wallace Heaton Gallery at 127, New Bond St., W.1. The pictures on view are enlargements made from negatives taken with Zeiss Ikon Miniature Cameras. The exhibition preceding this was of pictures taken by Dr. Paul Wolff with a Leica Camera. An exhibition of miniature camera portraiture by Marcel Sternberger will be on view during November, followed by an exhibition of Rolleiflex pictures in December.

Developing Miniature Films

By H. L. KETTLE.

AND A NEW METHOD OF OBTAINING FINE-GRAIN NEGATIVES.

PROCESSING exposed films from miniature cameras, especially the 35-mm. variety, should always be done in one of the Correx or similar tanks, as it assures freedom from fog, and obviates any need to touch the film surface with the fingers, a matter of vital importance if markings are to be avoided. The film should be wound on to the Correx spool in the dark, a simple matter, and the fingers need never touch any part of the film but the plain celluloid back. Once inserted and the lid of the tank clamped on, all the rest can be done in ordinary white light.

The developer chosen should be a fine-grain one like Johnson's "Fine Grain." Several changes of water after the developer has been poured out, and then a clean acid-hypo bath containing chrome alum or other hardening agent, followed by half an hour's wash in the tank with the lid off, should give a batch of flawless negatives. But a given time and temperature should be adhered to for best results.

Now I am going to give away a secret of my own for getting extra-fine grain results for big enlargements.

One of the essentials for absence of grain is that the negatives should not be under-exposed, but with the big-aperture lenses and high speed of modern films this should seldom be necessary.

For some years past I have found that if negatives were reduced chemically the grain was also reduced (I will give my theory for this later). The hypo-ferricyanide reducer is unsuitable as it increases contrast by cutting first into the shadow detail. Experiment, however, showed me that by first *partially* bleaching the negative in the ordinary sepia-toner bleacher of potassium ferricyanide and potassium bromide and then after a rinse placing it for a few seconds in a plain hypo fixing bath, a softening of the contrasts was obtained.

To produce my results I slightly over-develop and then reduce in the bleaching and hypo baths, as above, and get definite reduction of grain without loss of details in the shadows.

Another great advantage of this process is that it can be done a little at a time, repeating the process of bleacher and then hypo until the required result is reached. The negative should be kept on the move all the time it is in the bleacher or uneven results will be obtained. Where only slight reduction is required the negative should be removed as soon as a slight whiteness on the surface is seen, rinsed and immersed in hypo. Should this not be enough the process can be repeated after ten minutes' washing.

I am not chemist enough to prove my theory, but *in practice it works*, which is the main thing, and I give my theory of its action as follows: I believe it is generally accepted that in a negative the larger grains of silver are on the surface and are smaller as they approach the bottom layer of the film. Over-development causes these lower and finer grains to be developed up in proportion of course to the action of the light that has fallen on them. Stopping development at the normal time probably means in a fully-exposed negative that the developer has not had time to reach these smaller grains, but has fully developed the larger grains. Now I take it that the same order of action takes place with the reducer, and the larger and upper grains of silver are bleached first and rendered soluble in the hypo, leaving the image composed more or less of the finer grains according to the time of development and amount of bleaching taking place.

The average fine-grain miniature negative should in the ordinary way be capable of enlarging to 10×8 on glossy paper or 12×10 on fine matt paper without visible grain, but for bigger sizes the above process will produce negatives practically free from visible grain.

It should be remembered that increase in the size of grain will be caused by under-exposure and forced development or by drying off the negatives by artificial heat too rapidly.

Fine-Grain Developers.

THE KODAK D.76 FORMULA.

THIS is one of the oldest and best known of the fine-grain developers. It is easy to make up, keeps well, and is considerably faster in action than many formulæ of later introduction. There are two versions of it, both given here; B, containing less hydroquinone than A, gives slightly softer negatives.

	A.	B.
Metol	2.2 grs. (2.5 grm.)	18 grs. (2 grm.)
Hydroquinone	44 grs. (5 grm.)	22 grs. (2.5 grm.)
Sodium sulphite (anhy.)	2 oz. (100 grm.)	2 oz. (100 grm.)
Borax	18 grs. (2 grm.)	18 grs. (2 grm.)
Water to make	20 oz. (1,000 c.c.)	20 oz. (1,000 c.c.)

Dissolve the metol in about one-fifth of the water at 125° Fahr. In a second equal volume of water at 160° Fahr. dissolve about a quarter of the sulphite; when dissolved add the hydroquinone, and then add the whole to the solution of metol. In about two-fifths of the water, again at 160° Fahr., dissolve the remainder of the sulphite and the borax; mix this with the metol-hydroquinone solution, and add cold water to bring the total volume up to the required amount.

The fine-grain action of this developer depends largely on the high concentration of sulphite; it must, therefore, not be diluted for use.

At 65° develop super-speed panchromatic films for about 12 minutes, slow panchromatic and fast ortho. films for about 9 minutes, slow ortho. films for about 7 minutes.

Half-a-litre (17½ oz.) may quite safely be used to develop four Leica or Contax films in rapid succession, but it is not advisable to do more than three at the most if the developer is bottled after use.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

Using a Correx Tank.

Using the Correx tank for development of 35-mm. films I have on occasions found that some few negatives have been spoilt by the film touching the celluloid band. Can you tell me how to avoid this? A. D. F. (Bristol.)

We recommend that you put the film face inwards on top of the band into the clip on the spool, and that, in winding, you do not touch the band at all. The film, however, should be kept fairly taut. We have ourselves developed hundreds of negatives without a single accident since adopting this procedure, though early efforts suffered from just the fault you describe.

Filing Miniature Negatives.

Having had a miniature camera for some months, which included my summer holidays, I have collected a very large number of negatives. Can you recommend a convenient and inexpensive method of filing them so that they are both readily accessible and safe from damage? F. C. (Glasgow.)

Miniature negatives are usually filed in rolls. It is very desirable to put a rubber band round each roll to prevent it from uncurling and so getting scratched. The rolls can be stored in a box divided up into compartments by cardboard strips; you can buy filing boxes ready made, or fit the cardboard strips yourself to any suitable box. A sheet of paper in the lid, giving brief particulars of the subjects on each strip, will enable any desired negative to be found. Some workers prefer to cut up their strips into short lengths of from two to four negatives. These are then filed, flat, in transparent envelopes. Each method is claimed by its adherents to be safer than the other; you must take your choice.

Developing Part of a Film.

I use a camera taking 36-exposure strips of 35-mm. ciné film. I often wish to develop the first few exposures without waiting until the rest of the film is used. How can I know how much to cut off? D. M. (Wimbledon.)

The total length occupied by each frame is 1½ in. If you multiply this by the number of frames exposed and then add 10 in. for the film wasted at the beginning and end of the strip you will have the length which should be cut off. It is convenient to make two knots this distance apart in a piece of string and measure off the film against this in the dark-room. Retrimming the end of the film left in the charger will be necessary, and there will be a net loss of six or seven frames.

Scratches in Handling.

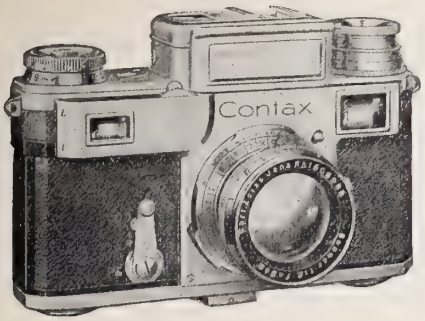
I find that my miniature negatives, although perfect when first dried, are liable to develop scratches through the necessary handling in making enlargements. Is there any cure for this? M. C. H. (Acton.)

The best way to prevent these scratches arising after the film is dried is to use a hardening fixing bath. A good formula for this is the following:—

Hypo	8 oz.
Potassium metabisulphite	½ oz.
Water	20 oz.

To this add ½ oz. chrome alum previously dissolved in 20 oz. water.

Maker's Name Wanted.



Can you give me the name and address of the makers or importers of the "Dollina" camera? S. J. (Gloucester.)

The camera is made at the—
Certo Camera Werk, Dresden, Germany.
The sole importers for this country are—
Messrs. "Actina," Ltd., 29, Red Lion Square, W.C.1.

Miniature Camera Societies.

I am anxious to join a society devoted to miniature camera work. Are there any such societies? And if so, where do I apply for membership? F. T. (Bayswater.)

The Royal Photographic Society, of 35, Russell Square, W.C.1, has recently started a Miniature Camera Group. For membership, apply to the Secretary. The Camera Club, of 17, John Street, Adelphi, W.C.2, has a Leica Section, and a number of photographic societies in different parts of Great Britain have formed, or are forming, miniature camera sections. Postal portfolios for "miniature" workers, in which prints are circulated round a body of members distributed all over the country, have been organised by Mr. George A. Slight, of 18, Ewelme Road, Forest Hill, S.E.23, and by Mr. E. A. Greenslade, of 115, Worple Road, Wimbledon, S.W.20.

A DISTINGUISHED MINIATURE CAMERA

We were greatly interested to note the much increased percentage of work attributable to the miniature camera to be seen in the big London exhibitions this year. No camera distinguished itself in a more thorough manner than did the Contax, and we are proud to say that in several notable cases we were instrumental in introducing to the successful exhibitor the camera which subsequently justified itself so handsomely. Looking through our records we note that during the past year we have actually supplied Contax outfits to some dozen leading London professional photographers. To some extent this was the outcome of our recommendations—we have always been Contax enthusiasts—but in other cases the selection was the result of careful experiment, trial and comparison on the part of the purchaser himself. The speed of operation facilitated by the combined range-finder and view-finder, the ability to employ single plates, and the amazing definition afforded by the unique f/1.5 Sonnar lens, are some of the factors that combine to endow the Contax with its great appeal from the professional or serious worker's point of view.

If you are considering the acquisition of a Contax, we shall be glad to help with the choice of equipment in the same way as in the past we have been able to help many of England's now leading miniature camera exponents. On request, we shall be delighted to send to any address a large selection of descriptive literature.

Contax Prices : **Model II.** With f/3.5 Tessar, £40 10s. ; with f/2.8 Tessar, £43 5s.
With f/2 Sonnar, £50 10s. ; with f/1.5 Sonnar, £65 15s.

The **Model III** Contax, with its built-in exposure meter, costs £12 10s. extra for each model.

WE SHALL BE GLAD TO SEND FREE ON REQUEST ANY OR ALL OF THE FOLLOWING NEW BOOKLETS ON MINIATURE PHOTOGRAPHY :

- **"How to Take Good Sporting Photographs with a Miniature Camera."**
- **"Unfettered Photography."**
- **"The Contax Model III."**
- **"Exakta Cameras and Accessories." (New Brochure.)**

DATING FROM NOVEMBER 1935 WE HAVE A FEW MONTHLY BACK ISSUES OF "LEICA NEWS AND TECHNIQUE." WHILE THESE LAST, WE SHALL BE PLEASED TO SUPPLY THEM FREE OF CHARGE TO ANY OF OUR LEICA CUSTOMERS WHO MAY HAVE NUMBERS MISSING FROM THEIR COLLECTION.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

CONTAXES :

Contax Model II, f/1.5 Sonnar lens. As new £52 10 0
Contax Model I, latest wedge-type range-finder, f/1.5 Sonnar lens. As new.....£39 10 0
Contax Model I, latest wedge-type range-finder, f/2 Sonnar lens. As new.....£29 10 0
Contax Model I, latest type shutter, f/2.8 Tessar. Practically as new.....£19 10 0
Zeiss 13.5-cm. f/4 Sonnar, for the Contax. As new £15 15 0
Plate Back for Model I Contax.....£2 10 0

LEICAS :

Leica Model III, black, f/2 Summar lens, ever-ready case. Practically as new.....£29 17 6
Leica Model III, black, f/2 rigid Summar lens, ever-ready case. Practically as new.....£26 17 6
Leica Model I, non-interchangeable f/3.5 Elmar, case. Practically as new.....£8 17 6
Another, as above. In good average condition £7 15 0
Leitz 5-cm. f/2 Summar, non-collapsible. New condition.....£10 10 0
Leitz 9-cm. f/2.2 Thambar (soft or sharp focus), pigskin case. As new.....£16 18 6
Leitz 13.5-cm. f/4.5 Elmar, coupled. Excellent condition £11 10 0
Flashlight Attachment for Leica Model II or III. £3 7 6

Other Miniature Cameras fitted with coupled range-finders :

Plaubel Roll-Op, f/2.8 Anticomar, Rapid Compur. As new.....£15 15 0
Voigtlander Super Bessa, f/3.5 Heliar lens, Compur Rapid. As new.....£13 0 0
Super Ikonta Model II, f/3.8 Tessar lens, coupled film transport and shutter release. As new..£20 0 0
Super Ikonta 530/LCpR, f/3.5 Tessar, Rapid Compur shutter, ever-ready case. As new.....£14 15 0
Super Ikonta 530/16, f/2.8 Tessar, ever-ready case. As new.....£21 10 0
Super Ikonta 530/2, f/3.8 Tessar lens, Compur Rapid, ever-ready case. As new.....£18 17 6
Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, case. As new.....£14 17 6
Super Ikonta 530/2, f/4.5 Tessar, normal Compur, case. As new.....£13 15 0
Super Nettel, f/3.5 Triotar. As new.....£12 17 6
Ensign Autorange, f/4.5 Tessar, Compur, fitted especially to take plates, with 3 slides and focussing screen. Cost over £16. As new.....£10 10 0
Voigtlander Prominent, f/4.5 Heliar, filter, pigskin case. As new.....£13 10 0

Cameras taking 16 exposures on V.P. size film :

Nagel Vollenda, f/3.5 Tessar, Compur, filter, Proxar. Excellent condition.....£8 15 0
Zeiss Kolibri, f/3.5 Tessar, Compur, case. Excellent condition.....£6 17 6
Zeiss Baby Ikonta, f/3.5 Novar, Compur. Excellent condition.....£5 15 0
Plaubel Makinette, f/2 Supracomar, Rapid Compur. Excellent condition £15 15 0
Nagel Pupille, f/2 Xenon, Compur. Excellent condition £12 12 0
Nagel Pupille, f/3.5 Leitz Elmar, Compur. Excellent condition.....£9 9 0
Voigtlander Perkeo, f/3.5 Skopar, Compur. Excellent condition.....£5 15 0

Cameras taking 16 exposures on V.P. size film—contd.

Foth-Derby, f/2.5 lens, focal-plane shutter. Excellent condition.....£5 5 0
Foth-Derby, f/3.5 lens, focal-plane shutter. Excellent condition.....£3 12 6
Baldi, f/2.9 Trioplan, Compur. As new.....£5 15 0
Baldi, f/4.5 Vidanar, Vario shutter. As new £3 3 0

MINIATURE REFLEXES :

Primarflex, f/3.5 Tessar. As new.....£27 10 0
Exakta Model B, latest lever wind, f/3.5 Exaktar lens. As new.....£15 15 0
Exakta Model B, f/1.9 Dallmeyer Super-Six, case. Practically as new.....£25 10 0
Exakta Model A, latest lever wind, f/1.9 Dallmeyer Super-Six. As new.....£21 10 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6
Exakta Model A, f/2.9 Xenar. Excellent condition £13 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur Rapid, ever-ready case. As new.....£19 17 6
Automatic Rolleiflex 6×6, f/3.8 Tessar, Compur, ever-ready case. Excellent condition.....£15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new.....£19 17 6
Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6
Rolleicord Model II, f/3.5 Triotar, case. As new £13 17 6
Noviflex, f/2.9 Trioplan, filter, case. As new £9 17 6
Voigtlander Superb, f/3.5 Heliar, ever-ready case. As new.....£13 17 6
Voigtlander Superb, f/3.5 Skopar, case. As new £11 17 6
Welta Superfekta, f/2.8 Tessar, 2 filters. As new £18 15 0

ENLARGERS :

Exakt Model II, for 6×6 negatives. Practically as new £14 17 6
Automatic Praxidos to take Contax lens, with condenser. As new.....£8 5 0
Miniature Magnaprint, f/6.3 lens, with supplementary adaptation for Leica. As new.....£3 17 6
Ensign Magnaprint, 3½×2½, f/6.3 lens.....£5 15 0
Leitz Fylad, to take Leica lens.....£6 10 0
Zeiss Miraphot 9×12 cm., Tessar f/4.5 .....£9 15 0
Zeiss Miraphot 3½×2½, Tessar f/4.5.....£7 5 0

PROJECTORS :

Contax Diabox, in case, to take Contax lens (films or slides). Cost £15. As new.....£10 0 0
Leitz Model VIIIa Projector, with single slide changer. Cost £8 13s. As new.....£6 0 0

R. G. LEWIS, The Miniature Camera Specialist, 202, HIGH HOLBORN, LONDON, W.C.1
(HOLBORN 4780) (Two minutes from Holborn Tube Station in the direction of Oxford Circus.)

Time to be thinking of Gifts!

If you have friends and kin Overseas, it's time to be thinking of Christmas—and Christmas Gifts. Do *something different* this year—send one of them, at least, a Camera, a Ciné Camera, or a Projector, with a selection of films, maybe. The stocks of "the Westminster" offer many attractive suggestions—and their special service for Post and Overseas orders is ready to help you at every stage, in every detail. For exceptional gifts, you cannot do better than call upon, or write to—"the Westminster."

For day-to-day customers in the normal course of business, "the Westminster's" EXCHANGE and OUT-OF-INCOME facilities are well worth investigating.

ENSIGN Magnaprint

Midget size. F/6.3 Ensar enlarging lens, specially designed condenser, for enlargements up to 15×12 in.; chart giving various sizes. Takes Leica, Contax, and all miniature negatives, also half-V.P. and others. Complete with electric fitting, less lamp. Also special model for Standard Leica lenses.

Either model

£4:15:0

Nine monthly payments of 11/1.

Automatic Focussing Model, with f/4.5 Dallmeyer lens

£8:10:0

Nine monthly payments of 19/10.

● *Other Models up to ¼-plate.*

NEW 'PATHESCOPE' Motocamera 9.5-mm. Model H

Remarkably compact and simple. Loaded in a few seconds. Size 4¼ in. square by 2½ in. thick, weighs only 2¼ lb. Taylor, Taylor and Hobson f/2.5 lens. Extra smooth running silent mechanism. Single pictures at will.

£6:6:0

Nine monthly payments of 14/9.

'KEYSTONE' 16-mm. 750-watt Projector

Greatest Value Ever!

2-in. large-aperture projection lens, motor drive, forward and reverse, Clarostat control, special still device, 750-watt lamp, super optical system for added brilliance, fan-cooled lamphouse. New improved double-claw action, screw tilting, geared rewind, simple threading. Complete with resistance, splicer and carrying-case, at phenomenally low price of

£36:10:0

Nine monthly payments of 85/1.

OTHER 'KEYSTONES'

MODEL I.
500-watt lamp, **£25**
Nine monthly payments of 58/4.

MODEL II.
300-watt lamp, complete with resistance, **£18 18 0**
Nine monthly payments of 44/1.

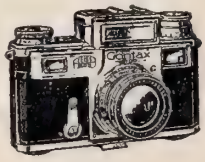
MODEL III.
200-watt lamp, **£12 12 0**
Nine monthly payments of 29/5.

8-mm. PROJECTOR, Motor drive, 200-watt lamp, **£13 13 0**
Nine monthly payments of 31/11.

The Peerless 'ROLLEIFLEX'

The camera that gains the prizes and produces the maximum of successful pictures. The £3,000 award by the "Daily Herald" was won by a ROLLEIFLEX user.

Absolutely automatic with Rapid Compur shutter, 1 to 1/500th sec., T. and B., f/3.5 Zeiss Tessar anastigmat. Takes 12 pictures 2¼×2¼ on standard roll films, can also be adapted for plates.



£25:0:0

Nine monthly payments of 58/4.

ZEISS IKON CONTAX III

With Built-in Electric Exposure Meter

Also exclusive Zeiss Ikon coupled wedge type distance meter, combined with viewfinder. Metal focal-plane self-capping shutter gives speeds 1 to 1/1,250th sec., speeds easily adjusted and visible, with delayed-action movement. Brights parts in chromium.

F/2.5 Tessar..... **£53:0:0**
Nine monthly payments of 123/8.

F/2 Sonnar..... **£63:0:0**
None monthly payments of 147/-.

F/1.5 Sonnar **£78:5:0**
Nine monthly payments of 182/7.

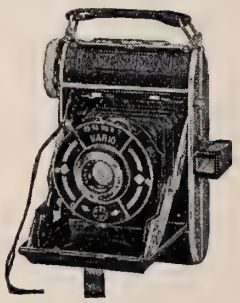
LEITZ 'FOCOMAT' Vertical Automatic Enlarger

Takes the standard 5-cm. focus lens, screw-in fitting. Scaled from 2 diameters up to 10 diameters. Will take negatives 18×25 mm., 24×36 mm., 3×4 cm. and 4×4 cm.

Price £16:6:6

Nine monthly payments of 38/1.

F/2.9 Lens 'WESTEX' Miniature



Superb Pictures in Dull Light

The "Westex" is the lowest-priced high-precision miniature, with the famous f/2.9 Radionar lens, of world-wide reputation. It focusses to 3 ft., and will give critically sharp pictures on winter days with cloudy skies; and the shutter is the well-known Prontor II, giving 1 to 1/175th sec., T. and B. Camera takes 16 pictures 4×3 cm. on standard V.P. spool, and is fitted with high-class optical direct-vision finder. Easy to manipulate, and most handy to carry **£5:12:6**

Nine monthly payments of 13/2.

Also with Vidanar anastigmat f/4.5 and Vario shutter, 1/25th, 1/50th, 1/100th sec..... **£3:12:6**

Nine monthly payments of 8/7.

NEW MAGAZINE CINE-KODAK

Remarkable Production!

Chargers loaded with 50-ft. 16-mm. films inserted in 3 seconds. Film instantly interchangeable, e.g., Kodacolor to black-and-white, and vice versa, without any loss of footage. F/1.9 Kodak anastigmat, also option of four telephotos 2 to 6 in., universal finder. Ask for full description, or call and see. Complete in leather case.

£40:0:0

Nine monthly payments of 93/4.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLVIII.

Mr. ERNEST R. ASHTON.

From information communicated to our Special Representative.

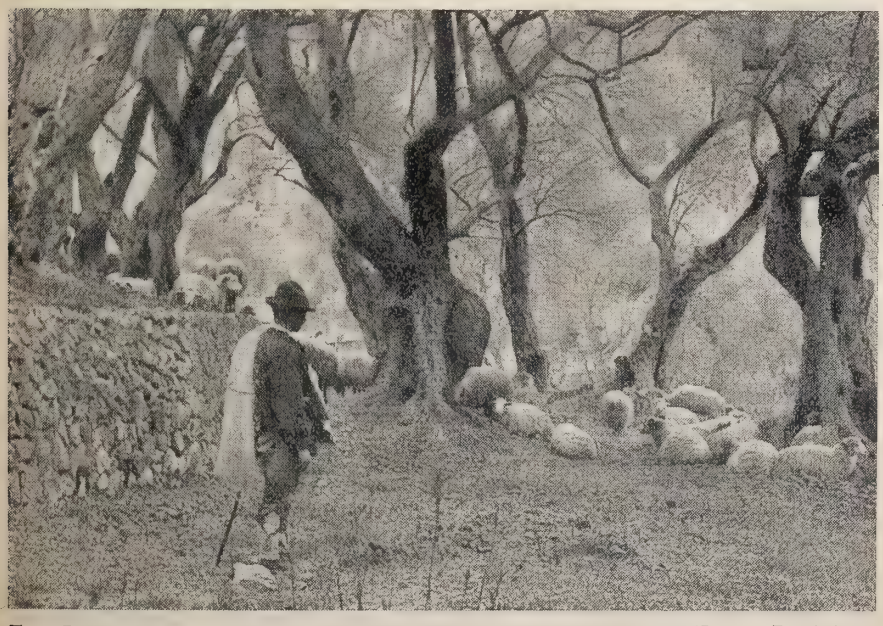
"THE methods adopted by photographers of an older generation in the production of the exhibition print may appear slow and laborious nowadays, but the results obtained were permanent and of lasting interest, besides giving evidence of the great amount of thought expended in their production. I have negatives and prints I made exactly fifty years ago, the technical quality of which I could not hope to surpass to-day.

"At a somewhat later period, about thirty-five years ago, the large exhibition print was almost invariably produced by means of an enlarged negative, the bromide print of the early days being of doubtful permanence.

"As this method of printing is still followed, I believe, by some of my contemporaries, with notable results, it may be interesting to detail the mode of procedure, the more so as there are obvious advantages in the control obtained by building up the image by successive stages. In my own case the original negative was made with a stand camera on an $8\frac{1}{2} \times 6\frac{1}{2}$ thick flat film. The Sandell multiple-coated plate was but recently introduced, and its advantages not yet fully realised.

"From the whole-plate negative a thin carbon positive was made by coating a plate with a substratum of pigmented gelatine and sensitising with potassium bichromate. With a somewhat unwieldy daylight enlarging camera a 15×12 negative was made, the exposure being calculated by means of a light meter of the Watkins type held close to the positive, the opportunity being taken in these various stages to modify the result as required.

"This enlarged negative lent itself well to after-treatment. The back could be coated with matt varnish, and darkened or scraped away in places as required. The film side could also be worked upon by the more venturesome.



"Platinotype printing was then in high favour, and gave beautiful permanent results. A pale lemon yellow image was formed in the printing frame, which was brought up to full strength by quickly passing it through a bath of hot oxalate of potash, a beautiful warm brown tone being obtained. Later, a cold-bath paper gave a rich black print. I confess to sometimes using a bath of cold tea or coffee to give a distinctive quality to the print.

"The carbon process has the advantage of being available in any fixed colour. A strong, vigorous reversed negative is required, and a special print meter is employed. As the image during development is very delicate, advantage can be taken when washing away the surplus colour to lighten the shadows if required with a syringe and hot water, while the high-lights can be cleared up with a brush. It is to be regretted that a variant of this process, gum-bichromate, is no longer in favour as the amount of control is only equalled by the bromoil process which superseded it later on.

"On the vital question of pictorial intent, a sound knowledge of the generally accepted principles of composition and light and shade can be gained by a careful study of the writings of my old friend and neighbour, H. P. Robinson. 'Picture-making by Photography,' and 'Pictorial Effect in Photography' are invaluable. As an aid to study I rarely pass a print shop without examining the black-and-white work, and noting the composition and the effect aimed at.

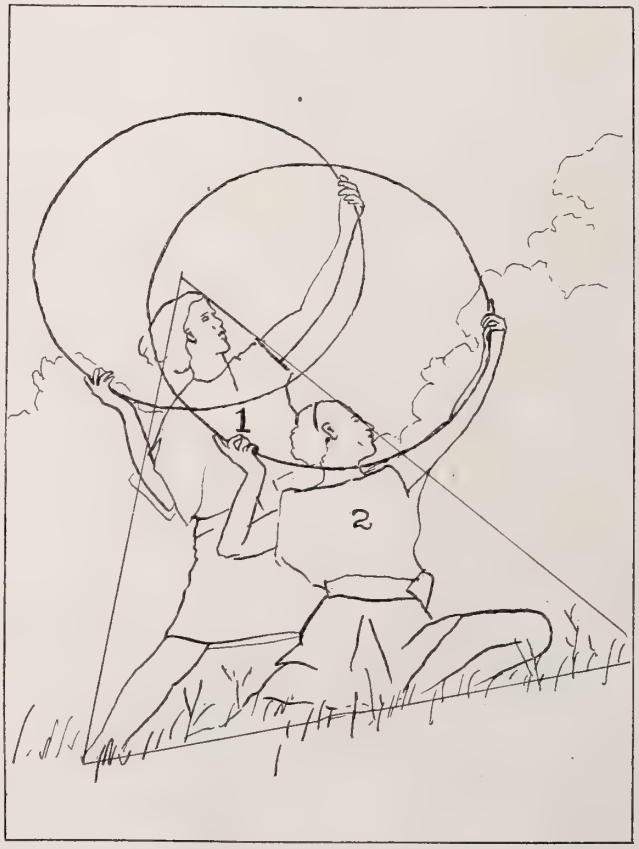
"These somewhat unorthodox notes may add variety to the recital of present-day methods, and open up new trains of thought to those seeking new methods of expression."

(A further example of Mr. Ashton's work is reproduced on one of the centre Art pages. This is from the original $14\frac{1}{2} \times 10\frac{1}{2}$ platinotype print, a fine example of the author's earlier work. The Riviera subject on this page is one of a recent series made for lantern-slide purposes. Mr. Ashton has just had a very successful one-man show at Tunbridge Wells.)

THE ITALIAN RIVIERA. *Ernest R. Ashton.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.



"SPARTA," *by Dr. T. de Csörgeo.*

INSTINCT with a feeling of light and air, this picture is also notable for the fine sense of design that is incorporated in its arrangement, and for the exceedingly fortunate way in which the lines assumed by the clouds harmonise and accord with the lines of the two figures.

On the right-hand side, the edge of the clouds seems to fall towards the lower of the two figures in opposition to the direction assumed by her torso. The sense of opposition tends to lend force to her pose, and there is no doubt that a considerable measure of accentuation is derived from this source. It is, however, prevented from becoming too obvious by the fact that the outstretched arm softens the opposition and introduces a note of harmony. On the other side, the little bit of cloud on the left opposes, in a similar way, the line of the shoulder of the standing figure and, likewise, imposes an equivalent degree of emphasis.

The emphasis so accorded to both figures enhances the significance of the group. This is as it should be, for it is intended to act as the centre of interest and does so very effectively. It derives a great measure of its importance, besides, from the powerful placing and also from the form which the group is made to assume. The attraction of human interest is of moment as well; but, in connection with the placing, the group—considered as a whole—occupies the strong position formed by one of the points of intersection of divisions of thirds, vertically and horizontally, from which it acquires quite sufficient power to maintain its supremacy in the scheme. The placing alone would be adequate to ensure a satisfactory composition, even if the leading lines of the clouds were not taken into account; but, beyond all this, there is a further factor which enhances its significance still more.

This arises from the pyramidal formation within which the outlines of the two figures are contained. It is indicated in the sketch by added lines, and the strength and solidity it confers are readily perceptible. It is not allowed to become too insistent, the emergence of the hoops from within its boundaries and the departures of the outlines of the figures from the strict lines of its formation preventing this, but the shape is, nevertheless, definitely suggested, and the part it plays in the arrangement is by no means inconsiderable.

It is of moment, again, in that it confers principality on the standing figure (1). In all ordinary circumstances, its most forceful point is towards its apex, and, as the head of the figure (1) happens to fall just there, her dominance, as the more important of the two, is confirmed. The kneeling girl (2) does not possess any like accentuation, and, despite the fact that she is the nearer, she can do no more than hold her place as a subordinate element. She has, of course, sufficient "pull" to justify her inclusion in the group but not enough to threaten the superiority of the first, so that the conditions necessary where a group of two is concerned—that one element shall predominate and the other be able to maintain its significance—are well and truly satisfied.

The same efficiency exhibited in the arrangement also extends to the technique. The values of the sunlight on the faces and clothing of the two figures are faithfully recorded, and show a brighter tone than that of the sky against which they come, while the modulations otherwise are full, and the impression that is conveyed is one of exceedingly high quality.

It is to this efficiency in arrangement and technique that the work owes its profound pictorial appeal. It is undoubtedly of a very high standard, but it could be wished that the effect of the introduction of the low viewpoint—necessary, perhaps, in order that the figures might be brought into proper relationship with their setting of sky—had not also involved the inclusion of so much out-of-focus foreground. Its depth of tone, it is true, prevents the defect from becoming unpleasantly assertive, but it is a blemish in an otherwise effective work, and should have been avoided.

The lighting conditions appear to have been favourable, and there is no apparent reason why a small stop should not have been employed in conjunction with a slower shutter speed to correspond, for the figures seem to have been posed, and no question of subject movement need have been considered. At all events, the point is one that should be kept in mind for the future, particularly if there are any contrasts in the foreground, for, in such circumstances, it would constitute a most serious drawback.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THERE is an excellent subject in No. 1 of the prints reproduced on the opposite page—"The Old Mill," by A. Overton—but its present disposition, with a superfluity of foreground and a lack of adequate sky space, does not seem to be as fortunate as it might be.

Circumstances and Cases.

It is true that there is not much in the way of cloud forms to grace the sky, and there is no special feature of interest in it to necessitate an extension of its proportions on that account. It is equally true that there is no real reason for the long stretch of water in the foreground, for the patch of light tone at the base impairs the feeling of stability, and the reflections above are scarcely sufficiently marked to provide an excuse.

But it does seem advisable that there should be a greater space around the mill to set it off to better advantage, and, had the camera been directed upwards or the rising front brought into action so that about three-quarters of an inch were removed from the base and the same amount added to the sky, not only would the arrangement seem better designed but the existing sense of restriction would be corrected.

The whole thing would seem to sit more comfortably in the picture space, and, while the arrangement might seem more inclined to the conventional, it would be much more sound, and appear more in accordance with the normal way of looking at things.

On the other hand, the existing disposition of the material could be maintained if, by some means or other, the length of foreground could be justified. If the reflections were extended, for example, to reach to the base of the picture, and if, at the same time, the lighting of the subject were such as to provide them with a greater contrast, there would be a valid reason ; but, in this event the main interest would lie in the reflections rather than the mill.

Point of View.

The circumstances of the case would, however, be appreciably altered with the transfer of the centre of interest, and the interpretation that is in mind might possibly be achieved by dropping the level of the viewpoint considerably.

The alteration would, of course, tend to compress the foreground to not a little extent but more of it would be included. The reflections, owing to the reduction of the angle of incidence, would be relatively extended and seem to reach closer to the point of view, a state of affairs that would mean that the same length of foreground could be included without showing that patch of light at the base which arises from the reflection of the sky.

From which the inference will be drawn that, where reflections are intended to form the motive of a picture or its main feature, it is a sound rule to adopt as low a point of view as possible. The contention was exemplified by more than one or two examples at the recent exhibition of the London Salon of Photography, and, in all probability, will be further sustained in *Photograms of the Year* when it comes out next month.

In the case of No. 3, "Old Bruges," by Phyllis M. Lowe, the reflections are evidently not intended to play so important a role, although, as a matter of fact, there are plenty of opportunities for reflection subjects, pure and simple, at no great distance from the spot where this was taken.

Sunshine and Life.

The subject, as it stands, conveys quite a good impression of the bit of canal represented, as well as its surroundings, but it is somewhat dull and lacking in life on account of the absence of any marked effect of sunshine.

Its pictorial attraction is therefore slight, and if the difference that a well-displayed effect of sunlight and shadow would make can be visualised, the sort of thing to aim for can be imagined. Even in the case of a straightforward "record" it is worth while aiming also at a good "effect."

No. 2, "Country Cottage," by D. R. Strange, with its sunlit gable end, shows a better idea, but is handicapped by the sense of restriction that arises from a lack of adequate space above the chimney. A more distant viewpoint would have enabled the fault to be avoided, but it may have been the case that such was impossible on account of the nature of the surroundings. If so, it is a pity, but, had the result been foreseen, it might have been found possible to treat the subject as a vertical, and to surmount the difficulty in that way.

Reflection Subjects.

At first glance, No. 4, "Clovelly," by W. F. Rown, does not seem to offer much in the way of artistic appeal. The sunlight on the sterns of the boats is pleasing enough, but it is overwhelmed by a superfluity of unattractive matter all round.

The sky is regrettably blank in tone ; the stone jetty is scarcely an object of beauty ; and the foreground towards the left can only offer the negative virtue of being unobtrusive. But, from a viewpoint a little to the right, somewhat lower, and with the line of sight directed more to the left, it is possible that quite a decent study of reflections could be made.

It would be necessary for the boats to be placed well up in the picture space and for the most to be made of their reflections, the shore being excluded and the walls of the jetty serving the function of providing a setting. All of the sky and the upper portion of the wall should be omitted, and the reflected light from the sky should be excluded at the base. Such a revision of the material, if possible to arrange, should make up very well, and, as far as can be seen, there is nothing to prevent it.

Still, the matter is one that could only be determined with certainty on the spot, but it would, at least, provide an idea of the way to set about the making of a picture of the type in question, and is worthy of experiment.

Views and Vistas.

No. 5, "Cherry Garden Avenue," by J. W. Bazin, gives an impression of a good "view," and is dignified by a presentable rendering of the sky, while No. 6, "On Looking Out," by K. MacDonald, shows a landscape seen as a vista through an archway.

The latter demonstrates the value of the framing effect afforded by an archway and the way it enhances what is seen through it. Nevertheless, it could be wished that something more pleasing in shape than the rather prosaic-looking bridge could have been found, and perhaps fortune will be more favourable on another occasion.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

HAND CAMERAS—THEN AND NOW.

PERHAPS you remember that I began to talk about the sort of hand cameras some of us used a good many years ago, but was led astray by cows—real and figurative. More likely you have forgotten all about it, and so I show in Fig. 1 another print produced with the aid—such as it was—of my first hand

Fig. 1.

camera. It shows the fogged edge that was more the rule than the exception. I will not describe the camera again, but I may say that no maker who produced anything like it to-day would sell a single one. If he did the purchaser would assuredly assassinate him, and any jury would acquit the slayer.

It is pretty safe to say that no really bad cameras are made to-day, but you ought to see some of the inventions of a quarter of a century ago or more. As a matter of fact I made a camera myself.

The box body was of very solid mahogany, and when I later sold the camera the purchaser said it had at least one merit—an elephant could safely stand on it. I used a 5×4 Wray lens, as this gave good definition over the whole of a quarter-plate. The shutter was a Thornton-Pickard roller-blind; there were two sunk finders, rack focussing, and a two-way rising front movement on a principle never used before—or since. There was a focussing screen available, and three double slides, one in position and two in reserve, all in the camera.

With this homely but useful camera I took such subjects as those shown in Figs. 2 and 3. You must not be too hard on me; every hand camera user in those days took such things, and was rather proud of them than otherwise. Now and then we scored a winner that would hold its own to-day.

You must remember that the plates I generally used in that old box had a speed of 200 H. and D. only, and that my favourite stop was f/11. Fig. 4 and hundreds like it were secured under similar unpromising conditions—judged by modern ideas. This is from an old gold-toned P.O.P. print; and the sky is printed-in from another negative. I wonder if there are many beginners to-day who print-in skies by daylight. Or by any other light for that matter.

If you knew the handicap of the early hand-camera worker, you would give some of the results he secured all the praise they deserve.

What I want to bring home to the beginner is this: you have a far better chance of getting perfect results than was the case ever before in the history of

Fig. 2.

photography. Even the cheap and simple cameras of to-day would have astonished and delighted your forebears. They never dreamed of such lenses and shutters, of such quality and speed of plates and films, of such variety and beauty of printing processes. Yet look what they did. At its best, can you beat it? Read what Mr. E. R. Ashton says on another page. And you ought to see his prints of half a century ago.

I often think that things are made so easy for the beginner nowadays that he never feels the necessity to strive and wrestle. His victories are too cheap, and very often they are not worth calling victories at all. If he thought and studied and worked

Fig. 3.

as the old stagers had to do, he ought to do more and do it better than they ever did or could. But does he?

There are beginners who have the most wonderful apparatus and material at their disposal, and do not take the trouble to learn how to take full advantage of it. Incredible as it may seem, a beginner sent me a negative the other day and asked what was wrong with it. Among other things that were wrong it had never been fixed! And I have known ever so many beginners who have not the faintest idea of the purpose and use of camera movements and fittings for which they have paid heavily. They seem to have heard that a little knowledge is a dangerous thing, and are not taking any risks.

Perhaps I had better make that fatuous remark, "Present company always excepted." But if I do I don't mean it.

To be frank, do *you* know all you should about your apparatus? When you try, say, a new printing process, do you study carefully every detail of the procedure first?

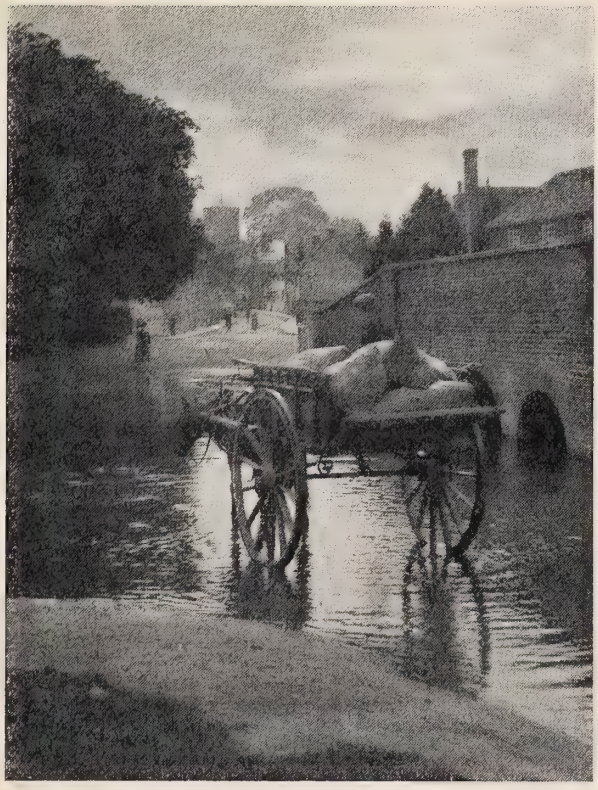

Fig. 4.

You can get far better than ever before.

The fact is that the best of the old stagers in photography worked hard and studied hard. This does not mean that the amateur photographer must make a tiresome burden of what should be a delightful hobby. But the photographer cannot get all the pleasure he should out of his work unless he makes a good job of it; and if he is to do this thoroughly he must learn how to do it. There is no question of prayer and fasting. Learning how to do things to perfection is quite a jolly affair. The necessary knowledge is easily accessible, and is handed out in the pleasantest form.

If you could not learn how to turn out really first-rate photographs without studying the stodgy treatises and articles of years ago I should advise you to give up photography and take to something cheerful and easy like the calculus. But you cannot possibly call "The A.P." stodgy, and if you studied nothing else you would soon know more than I did when I made my own camera. You can get far better help and guidance nowadays than ever before.

W. L. F. W.

DON'T BURY YOUR CAMERA

A Note for the Beginner. By J. M. HOFFMEISTER.

A CHANCE remark by a business acquaintance started a train of thought which resulted in this article.

Expressing the hope that the Monday after a very fine Sunday in early October might have resulted in a flood of D. & P. orders, I was met with the reply, "Oh, they've put away their cameras."

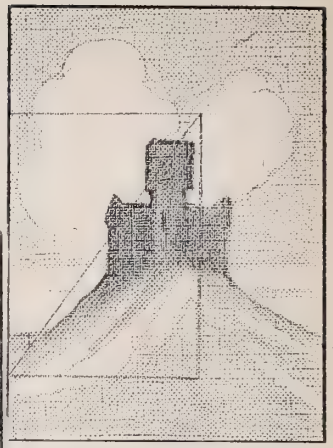
Is this a fact? Experience seems to indicate that this does happen in many cases, and even if the statement is only partially true, it is a great pity and shows that people have not yet fully realised the value of photography as a hobby or as an aid to other hobbies.

Many splendid opportunities for picture-making are missed if the camera is buried and only resurrected when the annual holiday comes round once again. Do you realise that the dexterity gained by the use in one short spell of a few weeks may be forgotten while the camera is hibernating?

The camera has cost you something, be it much or little; so why not extract the utmost value from your outlay by keeping the camera in commission throughout the year.

Each season has its opportunities and its pictorial values, whether it be indoors or out, and if a proper study is made of these, photography will be found to possess a fascination akin to that experienced by the artist who creates a picture with brush and palette.

Even the summer does not end with the annual holiday and there is much to be done throughout the year. You are using your eyes continually, why not let the camera record some of the interesting things you see? If you see little of interest you are only half alive and are missing much; better get busy about it.



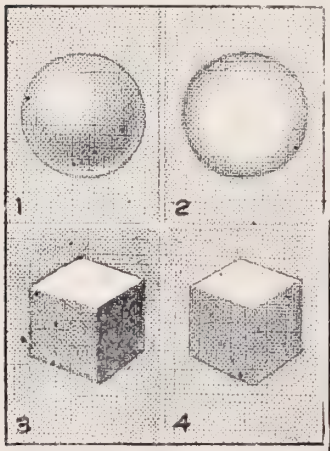
The splendid negative material now available renders picture-making a thing of pleasure and the results a permanent delight. Furthermore, it has been made comparatively simple, and those who commence with "snapshots" will find it well worth while to take up photography with the same enthusiasm that the devotees of tennis, golf and other sports give to their pursuits. Make your camera a regular companion, and progress from "snapshots" to "super snapshots."

Photography is the handmaid of sports and hobbies, and no matter what your interest may be, the camera will be sure to help you to a greater and fuller realisation of that interest.

To those who have only taken snaps there is a delight in store. Take out some super-sensitive panchromatic film, either in the roll or cut, together with a colour filter to suit your camera and material and get pictures which suggest or portray beauty and colour with such fidelity that they do actually convey to the mind a real sense of colour. If you have not yet tried the experiment try it now without delay.

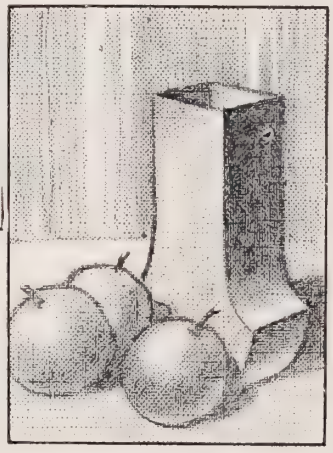
Picture Points

No. 24 (New Series) *by RICARDO*



Further Points on Modelling.

IN No. 20 of this series we saw the effect of light on the modelling of a low relief object and, on the same page, discussed the pros and cons of good drawing. While the two are quite different in their meaning they are more or less dependent on each other in pictorial photography.



In the top sketch we can see the effect of two different angles of lighting on a sphere, the simplest shape of all solid objects. No. 1, a three-quarter top front lighting, with a side reflector, gives a good impression of solidity which is certainly lacking in No. 2, where only a front centre lighting was used.

No. 3 shows a combination of good lighting and drawing on a cube, giving a pleasing variety of tones as well as in the shape of the three faces. While we have a similar outline in No. 4, the lack of modelling caused by the top, the wrong angle of lighting, does not provide such a good impression of depth as No. 3.

In the lower sketch we put the principle into practice where we have a subject in which both spheres and cubical shapes are present.

While it does not always follow that we want, or it is possible, to get the utmost realism into a picture, there is no doubt that it shows good technique and composition whenever these two points are intelligently interpreted.

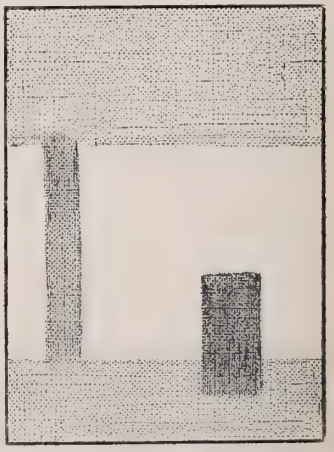
Diagonal Composition.

ALTHOUGH it is not advocated that one should build up or compose a picture on a predetermined structure because of the danger of making it look "mechanical" and stodgy, there is no doubt that if one is aware of the various structural devices in composition, there is a greater chance of recognising a possible subject, and so making an attractive picture out of what might be at first supposed to be quite ordinary material.

Here is a case in point. The top sketch shows a subject that is uninteresting because of its central placing and lack of variety in shape, line or tone. If we attempt to make a horizontal picture it becomes worse still. But if we take and apply one of the simplest of composition structural devices, the diagonal, we make something quite pleasing out of one of the portions, as suggested by the smaller frame, where the diagonal line shows the application.

We at once introduce variety in every way. The main point of interest is to one side, the distribution of weight is more pleasing, and from the "record" we evolve a pictorial arrangement.

As with all the other devices in picture-making, we must not carry it too far. If the subject is made to "hug" the diagonal too closely, and repeated too many times with other lines, we defeat our object. We immediately divide the picture into two and introduce a monotonous theme.



Pictorial Balance.

CONTINUING on the lines of a previous "Picture Point" where the subject of balance was discussed, we have here another method of assessing the "weight" of the various items distributed throughout the picture space, and one that will appeal to photographers of an experimental turn of mind.

Instead of dividing the picture into four areas by a vertical and horizontal line intersecting at the main point of interest, portion off the different masses of the picture so that they finally appear in simple shapes like those in the right-hand sketch, which represents the mass distribution of the first sketch. Make this sketch on a piece of tracing-paper over the print itself, and by pencil or a wash of tone indicate the main masses in their aggregate area and "weight."

Next cut out these shapes, and experiment with them by placing them in different positions to see if the original positions could be improved upon for balance. If a spare print is available, then the items can be trimmed out of the print itself, but care should be taken to ignore the various details in each portion so that one is left free to judge the *masses*, and not be influenced by sharpness of detail, subject matter and personal interest, which often are unconsciously the deciding factors with so many beginners. In this way an interesting study can be made on the subject of balance, and the placing of the masses that go to form the general composition.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

PHOTOGRAPHY FOR PEACE.

SIR,—Allow me to express my gratitude at reading Humphrey Moore's letter in your columns (issue dated September 30th) advocating photography for peace.

As "would-be" pictorial photographers we all love those peaceful country scenes, the peace of St. Paul's, and many other fine old buildings.

Surely then, if we would be peaceful, we should organise peace—not war—and if our cameras can be of any service let us use them in the way Mr. Moore advocates.—Yours, etc., ETHEL R. FROST.

A WORD FOR THE STAND CAMERA.

SIR,—On several holidays a box camera has accompanied me and has proved itself of great service, but is now replaced by a more ambitious outfit. Owing to a rather severe attack of "photographic fever," combined with the discovery of two or three spare pounds, I have recently invested in a Sanderson.

At first I experienced great shyness in erecting the tripod and using the focussing cloth, but have now overcome my self-consciousness and meet with extreme courtesy from everybody. I seem to be a magnet for children: a street is empty, camera fixed upon tripod, and then boys and girls of varying ages seem to spring through trapdoors in the pavement. So far I have been lucky, and found them too interested to be annoying. On one occasion three boys seized my tripod, removed the head, folded the legs, replaced them in the case, and had I allowed them would have strapped tripod and case to my cycle. I am now quite used to dialogues of the following nature: "'E's a newspaper man." "No, 'e aint." "Yus, 'e is." "You are a newspaper man, aren't you, sir?" "There you are, I told you he wasn't."

The time spent in reconnoitring for the best viewpoint, erecting tripod, focussing, etc., etc., is well repaid by the results, and also enables one to absorb the atmosphere of the place and to witness many little incidents in street life that would otherwise be missed. I much prefer this way of procuring photographs to the other method, which reminds one of Wemmick's remark in "Great Expectations"—"Hallo, here's a church! Let's have a wedding."

I am extremely grateful to my friend from whom I caught this fever, and trust it will defeat all medical skill.—Yours, etc., MOSTYN HARPER.

DIFFUSER OR CONDENSER ENLARGER?

SIR,—I have read your correspondent H. W.'s letter, *re* the enlarger problem, and as I have had experience with both types of apparatus, thought that perhaps I might be able to assist him in his choice. Taking the diffuser type first. Your correspondent writes as having heard that it is quite impossible to secure as good definition with a diffuser enlarger as with a condenser enlarger. This is only true to a very small extent. In actual practice, and with good sharp negatives, he will find that he can enlarge up to a considerable size without any appreciable loss of detail. At the same time *small* defects, such as any hairs or small particles of dust or slight scratches on the negative are considerably toned down, and in most cases are not noticeable on the finished print. On the other hand, though the condenser system undoubtedly gives the utmost sharpness from the negative, it also exaggerates any of the above defects.

Returning again to the diffuser enlarger. To overcome loss of light caused by the scatter, more powerful bulbs have to be used, which generate greater heat, and, unless the lamphouse is well ventilated, this heat can become very annoying in a small dark-room. Less powerful bulbs only increase the length of exposure.

With the condenser type one can get shorter exposures without having to use unduly strong lighting.

I notice H. W. is willing to spring the extra cost of a condenser, and I would therefore suggest he does as I have done. That is, combine the two types. If he purchases a condenser enlarger with a good roomy space for the carrier he can easily use it as a diffuser enlarger as well. With my own enlarger (which is a ¼-plate) there is plenty of room between the top of the carrier and the bottom of the condenser to place two or three pieces of ground glass over the negative. By doing this the concentrated light from the condenser falls on the ground glass and is then evenly diffused through the negative, giving a strong, soft light on the easel. Normally, I use only one piece of ground glass, and find that I very seldom require to use the condenser alone.

Here are some data from actual practice. Well-exposed negative, Ilford normal bromide paper, size of enlargement, whole-plate, exposure at f/6.3, using 100-watt Philips Argenta lamp, and one piece of ground glass between condenser and negative, 20 sec. This is fast enough for anybody.

There is another advantage in having a condenser enlarger and using the ground glass, and that is that it enables one to considerably alter the contrasts of negatives without recourse to reducers or intensifiers. Take the case of that misfit negative which is too soft to print well on normal bromide paper, and yet is too contrasty to do well on contrasty paper. If two or three pieces of ground glass are used to reduce the contrast still more, a brilliant print on contrasty paper can then be made.—Yours, etc., N. GILES.

PHOTO-ELECTRIC EXPOSURE METERS.

SIR,—May I draw your readers' attention to a practice indulged in by the makers of the modern photo-electric exposure meter, which, whilst being strictly accurate in fact, is at the same time very misleading. Tempted by an advert. which described the range of exposures obtainable as from 1/2,000th sec. to 60 secs., I purchased one. Judge of my surprise when on testing it I found the 60 secs. exposure which was obtainable was at f/22. My usual aperture for normal work is at f/8, and I was naturally thinking of the 60 secs. as at about f/8, whereas now I can only get about 7½ secs. at f/8. I was previously using a visual meter at 15s. which gave me equally good results. I do not think this is quite a fair way to advertise the meters, as most amateurs who spend £3 or £4 for an electric exposure meter want the long exposures for interior work.

I am wondering if any of your other readers have had a similar experience.—Yours, etc., W. R. HARVEY.

D. & P. WORK.

SIR,—I ask your permission to invite your readers' opinions on the average D. & P. service in this country.

To me, the results turned out by even the larger trade organisations are simply appalling.

I have just returned from Germany, where I had a number of English films developed and printed with excellent results, negatives correctly developed, prints well produced and finished. Other films, taken under the same conditions, well and correctly exposed, I have just had developed and printed by one of the leading houses here. The results are all deplorable. Films over-developed and prints then made on contrasty paper with the inevitable "soot-and-whitewash" results.

I had exactly the same experience two years ago on returning with a bag of films from Switzerland, except then the negatives were all under-developed.

I have had twenty-five years' experience hitherto doing my own work, but am now dependent upon the English trade D. & P. service, to my regret.—Yours, etc., G. H. SMITH.

NOT REALLY SERIOUS.

SIR,—I was interested in the paragraph "Photographing at Geneva," which appeared in "Topics of the Week" on October 14th, and especially in the following sentence: "The members of the League staff who carry unobtrusive cameras have unrivalled opportunities for indoor undress pictures of international celebrities."

I have been to many exhibitions and seen photographs of young ladies, celebrated and otherwise, dressed and undressed, some more and some less, and it would be great fun to see a "Geneva Gallery" at, say, the Salon, showing photographs of potentates, celebrated and otherwise, some dressed and some undressed. I have often wondered what an undressed potentate looks like. Surely he would lose some of his "potent."—Yours, etc., A. T. WALLIS.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

How to Improve "Close-up" Technique

By D. ALDWYN JAMES.

AMATEUR cinematographers will agree with me that there is still room for much improvement in the average ciné "close-up." The reason for this is not far to seek. The number of amateur productions, although otherwise good, that have been spoiled by poor "close-up" scenes are not few. Some "close-ups" are positively hideous to look at, and this is bound to have a bad effect on any audience.

A poor "close-up" may be due to two reasons. The wrong use of make-up, and poor subsequent photography. Or, wrong make-up making the production of good "tones" impossible.

The amateur cinematographer once he gets a clear understanding of the true relation which exists between good making-up and correct subsequent photography, will have gone far towards producing good "close-ups." However, this lesson can be learned, easily, if a little trouble be taken, and it is the purpose of this article to show how.

In order to achieve success in using make-up, the real reason for using it must first be clearly understood.

In film work, make-up must help to give a good tone rendering of the subject besides giving the player artificial "character." Even if the second purpose is gained, the whole effect is lost if the "character" registers badly. On the other hand, when this is properly done, the resultant record is a thing of beauty, to be admired by everyone.

This latter point may be better understood by examining the work of the professional worker. The professional, by the judicious use of the correct make-up, coupled with good subsequent photography, achieves a result which shows every tone in its correct value. Hence the sheer beauty of the professional "close-up."

It may be argued that the professional has great experience on which he may fall back. So he has. But why cannot the amateur benefit by utilising his own experiences?

If the amateur cinematographer experiments on his own, using various models, representative of well-known types, in conjunction with varying make-ups, and different filters on the camera, much will be gained in a short time. The improvement in technique will then follow as a matter of course.

In this manner, the ultimate tone-renderings given by a particular shade of make-up will be capable of being compared with the tones given by other shades, with and without filters, before the camera lens.

As a suggestion of the lines on which these experiments should be commenced, the following is given as an example.

Suppose we start our experiments with a girl whose hair is blonde, and whose eyes are blue. The model is made-up to the best of our ability, and photographed, first without a filter, and then with different filters. Each filter being used in turn. Notes are made of the exact conditions, and of each exposure.

The experiments are continued, using this time a different make-up from the one used in the first experiment, but nevertheless one that we think would be suitable. The photographs are again taken with and without the filters, and all conditions noted. It may be stated that the filters are essential in order to overcome not only the inherent harshness of the artificial lighting used, but also to assist in giving the subject good tone values.

Our experiments have furnished us with a large collection of records. When compared, these records will show us the falseness in tones given by the use of incorrect make-up, and the fine rendering of tones that is possible when the correct make-up is photographed with a suitable filter.

The time thus spent in conducting these experiments will teach the amateur cinematographer more than any amount of theoretical reading could ever do.

It must not be thought, however, that a great amount of make-up is always necessary to obtain the required effect. With modern panchromatic film stock, some make-up is still necessary, but not so much as that needed with orthochromatic material.

The point is to cover up all skin blemishes with an even layer of the correct shade, as found by the above trials to be correct. When doing this, the hands and neck must receive attention, and not only the face. The important parts of the face are then treated locally as required.

The amateur cinematographer will soon realise that if the above hints are followed his "close-up" technique will not only be very much improved, but the results thus gained will be a source of encouragement to proceed to still more serious work.

The value of mist on otherwise bright Autumn days is seen in the above shot—which emphasises the players and cuts out the background—an excellent subject for the amateur ciné worker.

...AND NOW THE ROLLEICORD

Last week we were able to announce that for the second year in succession the Rolleiflex Camera had won the big *Daily Herald* First Prize.

In 1935, £2,500 won by Mr. R. Jenkins with his Rolleiflex Camera; in 1936, £3,000 won by Mr. F. H. Done with his Rolleiflex Camera.

It now gives us great pleasure to announce that . . .

By kind permission of "Weekly Illustrated"

THE FIRST PRIZE OF £100

AWARDED BY "WEEKLY ILLUSTRATED"

HAS BEEN WON BY A

Rolleicord

Like the *Daily Herald* Competitions, the *Weekly Illustrated* Competition was open to ALL amateurs and to ALL makes of cameras. Congratulations are due to Mr. Kenneth M. Kershaw of Newcastle-on-Tyne, not only on his superb picture, but on his discrimination in choosing the right camera. Messrs. Jenkins, Done and Kershaw must be very grateful to their cameras for these considerable prizes.

THE ROLLEICORD is economical to run—it takes 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ 8-exposure roll film for 1/-. It's versatile, too—it can be adapted for plates for special work, such as portraiture, indoor photography or commercial work when it is an advantage to use single negatives. To those who favour 35-mm. size, a ciné film attachment is available. Rolleicord takes all Rolleiflex accessories except the angle mirror. It gets perfect pictures at any time of the year—summer or winter. Fitted with f/3.5 Zeiss Triotar lens for **£17 10s.** There is also the f/4.5 model at **£14 10s.**

ALL GOOD DEALERS STOCK ROLLEICORD

Maintaining the Efficiency of a Ciné Projector

IN order that consistently good results may be expected from a projector, the machine must receive periodical attention. The amateur cinematographer is apt to forget this fact, and the machine is allowed to continue to work, without attention, until a serious breakdown or falling-off in working efficiency makes immediate attention imperative. This lack of attention to the projector may be due to the mind being fully occupied by more interesting matters, leaving hardly any time for items that seem to be less pressing.

A good projector is an instrument of precision, the parts having been built and adjusted to within very fine limits.

The following notes are intended to direct systematic "looking-over" for the projector, and the routine should be carried out at regular intervals.

As the machine cannot be stored in a hermetically sealed case, dust is bound to find its way on to the body and into the crevices of inaccessible parts. This dust may best be removed by using a small hair brush with a sufficiently long handle to reach the deepest part. The outside of the machine may be treated with a soft cloth.

The next step is to examine all moving parts for any gritty particles. This may necessitate the parts being removed to allow of inspection. After this inspection they must be replaced, and any "play" found must be tightened up. It must be remembered, however, that in making adjustments a certain amount of "play" is permissible, but not to the extent of slackness, and, on the other hand, there must be no possibility of tightness. Should there be any tightness in any moving part there will be danger of the parts being worn by excessive friction. This also applies to the belts working the spools. The tension must be so adjusted that the belt cannot run off the pulley by being too slack, nor must it be so tight that there is a likelihood of it snapping. When examining the spools look out for any bulges, and make certain that the spools run evenly without trace of wobble. A bulged spool will cause the film to run off unevenly with a possibility of snapping the film.

The machine may be oiled after every part has been thoroughly cleaned. Do not use cheap bicycle oil, but best quality sewing-machine lubricating oil. With some machines the points where the oil is to be applied are marked by the makers. Other machines have one point at which to apply the oil, all parts being automatically fed from this central point. However, on no account must oil be allowed to come into contact with the parts over which the film travels.

A great loss in brilliancy is caused by the lens having been finger-marked. It is always advisable to clean lenses with the outfits specially supplied for the purpose. With these outfits, all the materials have been carefully chosen to avoid any possibility of damage being caused to the delicate lens surfaces. A handkerchief may be quite all right if there is a certainty that there are no gritty particles between the threads. The lens-cleaning solution contained in these outfits must not on any account be allowed to get in between the glasses, as it is a solvent of canada balsam, the substance which cements the glasses together. When unscrewing the separate components of a lens be particularly careful to replace them in the correct order, care being taken to avoid crossing the threads.

When the machine is running smoothly there is no necessity for increasing the voltage to allow for the retarding effects of friction, and although a slight overload is allowed for, any excessive overload will cause damage to the machine, sooner or later. Therefore, check the voltage to the motor, and also that to the lamp. It is true that an increase of voltage to the lamp will conduce to greater light efficiency, but it must be remembered that overrunning the lamp will also create greater heat, which may possibly damage the projector or the film. It will also result in considerably shortening the life of the lamp, which is an expensive item to replace.

By giving periodical attention to the points mentioned above, the amateur cinematographer will find that the troubles due to projector breakdown will be kept down to a minimum.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5 × 3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index, and are now ready. The size of the box is 5½ × 3½ × 3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

47. REDUCING BROMIDE PRINTS

BROMIDE prints can be reduced by most of the reducers suggested for negatives, but care must be exercised in using the hypo-ferricyanide reducer, as the action is generally so rapid that there is a tendency to attack very quickly the finer half-tones and details in the high-lights.

Over-exposed and over-developed bromide and gaslight prints can be reduced in density most effectively by using the following modification of the permanganate reducer:—

Common table salt	40 grs.
Pot. permanganate	1 gr.
Sulphuric acid	10 min.
Water to	10 oz.

If the action of this solution is too rapid, the water may be increased as much as desired (within reason), for it is better that the action be slow and so under control. The bath as above will not keep, and should only be prepared when wanted; it may be readily prepared by keeping the permanganate in a stock solution of 1 grain to each dram of water, which will keep indefinitely.

Before placing the print in the reducing solution it should be soaked in water until limp, so as to ensure even action. Reduction commences quickly, proceeding steadily throughout the gradations of the print, which gradually becomes lighter and lighter, yet preserving its gradation scale and a good neutral black colour.

As soon as the print has been sufficiently reduced it is rinsed in water and transferred to a fixing bath (2 oz. hypo, 20 oz. water) in which it should remain for about ten minutes. If, after fixing and washing, any permanganate stain remains, it may be removed with the following:—

Hydrochloric acid	200 min.
Common salt	25 grs.
Sodium sulphite (anhydrous)	25 grs.
Water to	20 oz.

This bath may not be necessary if an acid fixing bath is used.

A further good wash after clearing completes the process, which should yield a print of good gradation and tone.

48. SCREEN DISTANCES FOR SUB-STANDARD CINÉ FILMS

In the following tables the distances from ciné projector to screen are given in feet to obtain pictures of different sizes with lenses of different focal lengths.

16-mm. Films.

	Width of Screen Picture in Feet.							
	1	2	3	4	6	8	15	20
2 cm.	2	3¾	5¾	7¾	11½	13½	29	40
1 in.	2½	5	7¾	9¾	14½	19½	36½	49
1½ in.	3⅝	7¼	11	14½	22	29	54	72
2 in.	5	9¾	14⅛	19	29	39	73	97
3 in.	7¼	14½	22	29	43½	58	109	145
4 in.	9½	19	29	39	58	77	145	193

9.5-mm. Films.

Focal length of Projector Lens.	Width of Screen Picture in Feet.						
	1	2	3	4	6	8	10
2 cm.	2½	5	7½	10	15	20	25
1 in.	3	6	9	12	18	24	30
1½ in.	4½	9	13½	18	27	36	45
2 in.	6	12	18	24	36	48	60
3 in.	9	18	27	36	54	72	90
4 in.	12	24	36	48	72	96	120

Example: To obtain a 4-ft. picture with 1-in. lens, the projector for 16-mm. film must be 9¾ feet from the screen; for 9.5-mm. film, 12 feet.

★ LIMITLESS LIGHTING EFFECTS and — PICTURES of OUTSTANDING MERIT

★ MATÉLUX

42/-
COMPLETE WITH LAMP
Carrying Case 7/6 Extra.

EXTRA LAMPS 12/6 EACH

The Lamp that puts LIGHT in de-LIGHT-ful Pictures

GET YOUR LIGHTING RIGHT !

NO matter what type of camera and lens is used, there is available, to both Amateur and Professional Photographers, this wonderfully portable and intensely brilliant source of light, which has completely revolutionised the field of indoor photography.

Remember, if your lighting is right, and correct exposure given, the resulting negative will be perfect.

The "Matélux" is a perfectly balanced outfit, weighing less than 13 oz., whilst the special supercharged 300-watt Lamp has a life of over 100 hours, and suffices for many thousands of beautiful photographs. The "Matélux" Reflector has a Movable-Socket Table Stand—enabling the light to be directed to any angle.

"Matélux" Lighting Equipment is the open door to complete success in the fascinating field of indoor photography. Learn more about this wonderful illuminant.

"Amateur Photographer" 4/11/36.

Coronet 9.5 M.M Projector

THE PROJECTOR YOU HAVE BEEN WAITING FOR

BUILT TO THE PUBLIC'S SPECIFICATION

1. Sprocket driven-no claws, making damage to films impossible.
2. Absolutely self-contained, no extra resistances lying around to trip over in the dark.
3. Flickerless pictures, achieved by the use of accelerated intermittent movement.
4. Geared rewinds 5-1 ratio.
5. Combined lamp and wall plug, no searching for an adaptor.
6. 30, 60, or 400 ft. reels without adjustment.
7. 1" Anastigmat projection lens, giving a brilliant picture approximately 36" / 27" at a 10' throw.
8. Any voltage 100—250. Any current A.C. or D.C. No supplementary resistances required.

Obtainable from all good Photographic Dealers.

HAND DRIVEN
5 GUINEAS
Motor Unit which fits inside base 45/-.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, November 4th.

Battersea Men's Inst. C.C. "People I Have Shot." James Jarché.
Bethnal Green C.C. Talk on Still Life.
Birkenhead P.A. "Dufaycolor." G. H. Sewell.
Birmingham P.S. (Ciné Sec.). Demonstration of Movikon Ciné Camera and Kinox Projector. Zeiss Ikon Ltd.
Bradford P.S. "Oil Reinforcement," J. Redfern. Pictorial Group Evening.
Brighton and Hove C.C. "Pictorial Photography." C. Cecil Davies.
Chorley P.S. "Pictures for Pleasure and Profit." C. Gent.
Coventry P.C. M.C.P.F. Portfolio and Slides.
Croydon C.C. "Thirty Years of Press Photography." A. Barrett.
Ealing P.S. "Dufaycolor Photography." J. E. Archibald.
Edinburgh P.S. "Springtime in the Scottish Border." P. W. G. Gunn.
G.E. Mechanics' Inst. P.S. "Combination Printing by Enlargement." W. E. Ginger.
Hinckley and D.P.S. Demonstration on Contact Printing. H. W. Brookes.
Howard de Walden P.C. Cinema Lecture. Mr. Blair.
L.M.S. (London) P.S. "Photographic Papers." S. Schofield.
London School of Hygiene P.S. "Adventures with a 5s. Camera." H. B. Wells and L. Balston.
Luton and D.C.C. Contact Lantern-Slide Making. C. G. Linnell.
Northallerton and D.P. and C.S. "More Dufaycolor." Dr. W. C. Fothergill.
Partick C.C. Whist Drive.
Shropshire C.C. "Cycling Across Norway."
South Essex C.C. Members' Night.
S. Suburban and Catford P.S. "Wash in Running Water One Hour." G. W. L. Carter.
Tunbridge Wells A.P.A. "A Wanderer in Photography." C. R. Marshall.
Worcestershire C.C. "The Amateur Photographer" Prize Slides, 1935.

Thursday, November 5th.

Armley and Wortley P.S. Development of Plates and Films. G. H. Waumsley, Armley.
Ashton-under-Lyne P.S. Half-Yearly General Meeting.
Bath P.S. Outings. Also General Competition (any subject).
Bayswater and Padd. P.S. "Practical Lantern-Slide Making." R. R. Rawkins.
Bolton C.C. Lantern Lecture: "Cumberland Lakes and Fells." G. A. Forman.
Brighouse C.C. "Wentbridge and Wentvale." W. E. Gundill.
Bury P.S. Elementary Photomicrography. G. H. Rodman.
Camberwell C.C. Lecture.
Cardiff C.C. Composition for Beginners.
Coatbridge Co-op. C.C. Business Meeting.
Derby Rly. Inst. P.S. "Some Birds of the Streams and Seashore." W. H. Willford.
Gateshead and D.C.C. "Plates and Films in relation to Pictorial Photography." S. Bridgen.
Greenock C.C. Demonstration—Processing of Dufaycolor. J. Weir.
Hammersmith House P.S. Criticism of Lantern-Slide Competition. S. I. Elfick.
Hull P.S. Some Movie Pictures from Berlin and Stellingen Zoos. F. A. Jordan.
Keighley and D.P.A. Some Cruising Holidays in the Baltic. J. C. Scott.
Letchworth C.C. A Discussion: Exhibition Enlarging and Selection of Paper. D. W. Brunt.
Liverpool A.P.A. Lantern Lecture: "Peoples of the Empire." Mrs. Tillemont-Thomason.
Loughborough P.S. "Along the Riviera." A. Hackett.
Newcastle and D.A.C.A. Films. Sutton and Dist. Movie Makers.
North Middlesex P.S. Competitions. Prints. Members' Queries.
Padiham and D.P.S. "The Bromoil Process." T. C. Egan.
Sinclair P.C. "The Evolution of a Competition Print." S. J. Gollop.
Singer C.C. "Developing." J. Fearn.
Stourbridge Inst. P.S. "Panchromatic Plates and Filters." H. P. Newland.
Sunderland P.A. Lecture: "Photography and the Law." J. H. Cleete.
Wimbledon C.C. "This Miniature Business." A "Leica" Guy.
Woolwich P.S. Lecturettes. House Exhibition, any subject. Members.

Friday, November 6th.

Royal Photographic Society. "Light Filters in Landscape." J. A. Hall.
Bethnal Green C.C. Lecture: "Enlarging, Principles and Practice."
Colne C.C. Surprise Night. A New Developer.
Dartmouth L. & B. Soc. "Toning." F. Holwill.
Harrogate P.S. "The Glamour of Morocco." Alex. Keighley.
King's Heath and D.P.S. Print Criticism—Portraiture and Figure Studies.
Leigh Lit. Soc. "The Open Road." Oscar Harris.
Photomicrographic Soc. "Insect Close-ups." H. Castle Fletcher.
Photo. Soc. of Ireland. Demonstration: After-treatment of the Negative. A. V. Henry.
Southend-on-Sea and D.P.S. Lantern-Slide Making: Demonstration by H. W. Pratt.
Walkden and D.P.S. Lantern. Show of Alliance Slides.

Saturday, November 7th.

Hammersmith Hampshire House P.S. "The Development of Roll Films." C. B. Casson.
Watford C.C. Monthly Competition.

Sunday, November 8th.

Phœnix C.C. Visit to the Paramount Theatre.
Todmorden P.S. Beautiful Manxland (L).

Monday, November 9th.

Ashington and Hirst P.C. Secretary's Evening.
Bexley Heath P.S. "Light Impressions of Many Things." T. D. Nunn.
Blackpool and Fylde P.S. "Special Work on the Print." R. Boughton.

Monday, November 9th (*contd.*).

Bolton C.C. Council Meeting at 7.30 p.m.
Bournemouth C.C. "Portraiture." Miss Muspratt.
Bradford P.S. Print Night. Critic: Rev. C. W. Garratt.
Brighton and Hove C.C. Beginners' Evening—2. Developing.
Camera Club. "The Work of the Literary Agent." John Farquharson.
Camera Club. "Press Photography with the Leica." J. Jarché.
City of London and Cripplegate P.S. "Enlarging." H. A. Kind.
Dewsbury P.S. Discussion Evening and Print Criticism.
Erdington and D.P.S. Ciné Display (Kodatone Colour Films). H. L. Brooks.
Glasgow and W. of Scotland P.A. Facts and Formulæ. David C. Lawson.
Kidderminster and D.P.S. "Guesswork versus Measurement." J. N. Cockin.
Kingston C.C. "Intensification and Reduction." B. B. Hill.
Lancaster P.S. Home Portraiture Demonstration. The Members.
L.C.C. Staff C.C. "Trees and Tree Photography." R. C. B. Gardner.
Leeds C.C. Paper Negatives. Demonstration. E. Clarkson, Leeds.
Newcastle (Staffs) and D.C.C. Monthly Competition—Prints.
Oldham Equitable P.S. Quarterly Meeting.
Padiham and D.P.S. "Mounting" (Beginners). Dyson and Ford.
Partick C.C. Dennistoun–Partick Exhibition Opens.
Preston C.C. Lantern Lecture: "A Peep at Norway."
Shropshire P.S. "Composition." M. O. Dell.
Southampton C.C. Kodachrome Ciné Film Process. Messrs. Kodak, Ltd.
Southport P.S. "With Car and Camera in the West Highlands." G. Wheeldon.
S. London P.S. "Lantern-Slide Making." A. E. Marden.
Wallasey A.P.S. "The Way of the Lovely Sky." Capt. A. G. Buckham.
Walsall P.S. "Lantern-Slide Making for the Novice." C. G. Wheeley.
Walthamstow and D.P.S. "Composition." S. Bridgen.

Tuesday, November 10th.

Royal Photographic Society. Annual Dinner. Café Monico, 7 p.m.
Armstrong Whitworth and Vickers Armstrong C.C. "Photographic Exhibitions." M. Young.
Bedford C.C. Lantern Lecture: "Here and There in East Anglia." B. G. A. Snelson.
Belfast C.P.A. C.C. An Invitation to the Studio of Mr. Louis Morrison.

Brighton and Hove C.C. "The Delights of Colour Photography." R. M. Fanstone.
Bristol P.S. Stereoscopic Evening.
Chorley P.S. Negative Quality. Members.
Coventry C.C. "A Dutch Fishing Village." T. H. Cox.
Croydon C.C. Ciné Lecture (Colour). J. H. D. Ridley.
G.E. Mechanics' Inst. P.S. Competition Evening. Prints and Slides.
Hinckley and D.P.S. 1936 Alliance Competition Slides.
L.M.S. (London) P.S. "A Tour in Germany." G. R. Bolton.
Northallerton and D.P. and C.S. Gadget Evening and Print Competition.
Partick C.C. S.P.F. Colour Slides and G.D.U. Slides.
Phœnix C.C. S.P.F. Portfolio.
Solihull P.S. "Successful Picture-Making for Beginners." E. A. W. Cave.
South Essex C.C. Visit Ilford Society.
S. Suburban and Catford P.S. "El Moghreb el Aksa." H. G. Neville.
Worcestershire C.C. Members' Evening.
York P.S. "Black-headed Gull at Home." F. Vear.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Winchester Quart.

What is a Winchester quart and how much does it contain? A. D. D. (Newcastle.)

A "Winchester quart" is a large glass bottle, fitted with a glass stopper, and contains 80 fluid ounces or 4 pints.

Keeping Developer in Stock.

I intend to begin making up my own M.Q. developer for gaslight printing. Naturally I shall wish to make up a fair quantity at a time for the sake of convenience. Would you please advise me as to how long a stock solution of this kind can be kept without deterioration and what precautions make for satisfactory keeping?

K. A. (Warrington.)

It is quite impossible to say for how long a solution will keep. The great thing is to protect it as much as possible from air. We have recently suggested arrangements by which this can be done. If you find it necessary to make up more than the usual quantity you should make it up with water that has been boiled for several minutes to expel dissolved air, and the finished solution should be kept in small bottles, filled to the top and tightly corked.

An Exposure Meter Query.

I have an extinction-type exposure meter of German make. My dealer informs me that my usual film (Verichrome) has a speed of 4,400 H. and D. I do not see how I can work out the exposure, for the highest speed shown on the meter is 2,000 H. and D. R. B. B. (Kettering.)

We do not know on what authority your dealer gave the speed of Verichrome film, as the makers themselves decline to do anything of the kind. In any case, the H. and D. speeds on your meter will be Continental ones, which are often three times as high as those used in this country.

By way of experiment with your film, find the exposure for 2,000 H. and D., and then give half that. This will be the same as reckoning the speed as 4,000. If you find you get underexposure the only course is to take a lower speed number.

Unsharp Enlargements.

I have an old enlarger, intended, I believe, for half-plates. It has a 6-in. diameter condenser and a compound lens not marked in any way. I have been trying to use this for enlarging films $2\frac{1}{4} \times 1\frac{3}{4}$ and find that I cannot get sharp definition all over the picture; it is either sharp at the centre and blurred at the edges, or vice versa. Can you give me any assistance?

E. S. G. (Sevenoaks.)

Your enlarger cannot have been intended for half-plates, as the condenser is much too small. It is inconveniently large for use with such small negatives, but with these we should not have thought you would have had trouble with the definition. The lens is one which gives a curved field instead of a flat one, and this means that you will have to focus for the best definition somewhere between the middle and the margins of the image, and then use a small stop to get sharp definition all over.

Transferotype Paper.

I am anxious to make some enlarged negatives (10×8 in.), and do not wish to use plates owing to the cost. I have tried Transferotype paper, but always fail to strip it off the glass. If the water is hot enough to release the paper the emulsion blisters. I give the glass a preliminary coating of gelatine containing bichromate and expose to light as recommended in "Photographic Enlarging." Where am I going wrong?

W. S. (Rochdale.)

We know of no better way than the one you describe. Before stripping the paper you must take care that the temperature of the water is approximately that stated. If it is cooler the paper will not strip, and, if it is hotter, the emulsion will blister. If you keep to the instructions you should have no difficulty at all. Are you using a thermometer? And, if so, is it reasonably accurate? Perhaps you are trying to strip the paper off too soon; it will require soaking in water at the correct temperature for a minute or two before the paper will come away.

Exposure by Candlelight.

Will you please enlighten me as to the approximate exposure for a "Candle taken by its own light," using Agfa ISS film?

M. L. P. (Tottenham.)

We cannot venture to suggest an exposure in the circumstances you name, even if you had mentioned the stop to be used, which is obviously an important factor. We do not know either whether you want to show only the candle and its light or any of the surroundings, and, if so, what these surroundings would be and the extent to which you wish to show them. The only practical course in such a case is to find out the appropriate exposure by experiment.

Finding the Focal Length.

I have a horizontal enlarger made by the Midland Camera Co., Birmingham, and do not know the f/ numbers of the lens or the focal length. The lens stop is operated by a lever on the side and is marked 1, 2, 3, 4, 5. W. T. C. (Oswestry.)

It will be near enough for practical purposes if you rack out the lens until the image on the easel is exactly the same size as the negative image. If you then measure the distance from the negative to the stop in the lens, half this distance will be the focal length. Now measure the diameter of the largest stop, and see how many times this is contained in the focal length. This will give you the f/ number. Finally, you can measure the other stops similarly.

Lens Hood and Light-filter.

In using a lens hood and a light-filter in conjunction, should the sequence be lens, lens hood, colour-filter, or lens, colour-filter, lens hood?

H. W. (Belfast.)

The almost invariable practice is to fix the colour filter on the front of the lens, and then the lens hood over the filter. If you have the filter on the front of the lens hood you might as well not use the hood at all.

Testing Second-hand Cameras.

I want to possess a reflex camera, about which I see many advertisements in the columns of your magazine, but could you kindly arrange a test by yourself, instead of by the buyer? S. K. (India.)

We are afraid that we cannot undertake to test cameras. We suggest that if you are in doubt as to the safety of buying a second-hand camera you should make your choice from the cameras offered second-hand by one of the well-known dealers, in which case you may be quite confident that the camera will be in perfect order.

Exposure Meters in Artificial Light.

I do a considerable amount of photography indoors, both by daylight (usually dull) and by Nitraphot light. Would any of the photo-electric meters be suitable for this class of work? I usually use ordinary slow plates.

M. W. D. (Middlesex.)

We have found photo-electric meters just as satisfactory for use in Nitraphot lighting as in daylight, but we would point out that it is only the more sensitive meters that will give sufficient indication. With panchromatic films or plates the readings can be relied upon exactly as in daylight, but for non-orthochromatic plates used in artificial light we suggest that you give not less than four times the exposure indicated by the meter.

"Snap" this opportunity!

A free copy of this fine publication plus a voucher worth 6d. to 3/- if you post the coupon below

This new, up-to-the-minute, illustrated edition of the "Granville Guide" should be in the hands of every photographer—amateur and professional alike. It contains full working instructions, formulæ, useful articles written by experts, and gives a complete list of materials, including many new lines. The Granville products described in this book ensure perfect results with the minimum effort, whether used by the beginner or the skilled worker. SOLVED!

. . the PROBLEM OF ARTIFICIAL LIGHT EXPOSURE!

with the

"TEMPiPHOT"

AND STRENGTHENING

AMPLIFIER

"Tempiphot" is the only meter with an amplifier, which makes it possible to record artificial-light exposures up to 120 seconds' duration. It can be used with or without amplifier, and in itself is the smallest and most efficient meter obtainable. Gives instantly accurate readings for strong, poor, artificial or interior lighting. "Tempiphot" or amplifier easily fit a waistcoat pocket.

TEMPiPHOT COSTS ONLY 75/-
Amplifier 37/6
Morocco Zip-Fastener Cases to fit either (if desired) 5/- each

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

NOW READY

A NEW AND THOROUGHLY REVISED EDITION—THE FOURTEENTH OF

WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by
F. J. MORTIMER, Hon. F.R.P.S.

Cloth Boards
Size 7½×5 inches 634 pages

Price 7/6 net
By post 8/-

A complete reference work for the practical photographic worker. It provides useful information in dictionary form on every phase of photography—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on all recent developments.

From all leading Booksellers or direct from the publishers

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

"ELTRON" HEATER

The "Eltron" is the most convenient and quickest method of heating a developing solution to the requisite temperature.
The "Eltron" can be used in any room where a supply of electric current is available. It is safe in use and can be immersed in a glass or other vessel and the solution quickly brought up to the temperature required.
Universal pattern "Eltron," for use on any voltage, with plug and lamp adapter.
Price 15/-.

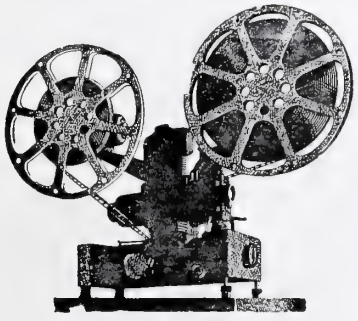
MOVIES IN THE HOME

COME TO BOND STREET WHERE WE HAVE EVERYTHING FOR TALKIES AND MOVIES. EXPERT ADVICE AND DEMONSTRATIONS FREE.

ACTUALLY IN STOCK

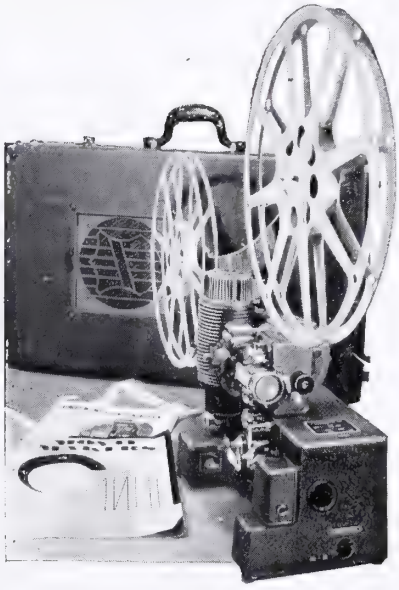


The FAMOUS DE VRY 16-mm. INTERMITTENT TALKIE OUTFIT

The first 16-mm. Sound Projector with the famous sprocket intermittent and silent chain drive. **No lost loops,** so frequent with the claw movement. Operates in an enclosed oil system. Has radio-type illuminated control dials. Has double sound filter to ensure even flow of all sound frequencies. 1,000-watt concentrated filament lamp. Complete in two carrying-cases .... **165 gns.**

GEBESCOPE MODEL B

16-mm. portable sound equipment, composed of 2 carrying-cases, one containing the projector unit and the other twin moving-coil speakers. Shows remarkably clear pictures 10 ft. wide at a distance of 70 ft. Gives splendid volume. **£135:0:0**



The first of nine monthly payments secures any talkie outfit.

BELL-HOWELL'S "FILMO" 1,000-WATT PROJECTOR

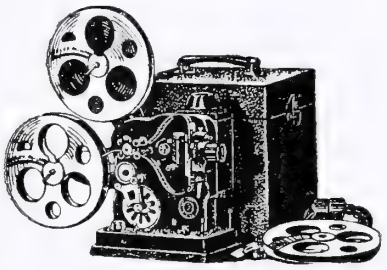
The most powerful 16-mm. projector yet produced—with its new optical system, provides 80 per cent greater screen brilliance than 750-watt projector, with only a 33⅓ per cent lamp wattage increase. Fully adequate cooling, 1,630-ft. film capacity..... **£129:0:0**

Let us give you a demonstration.

BELL-HOWELL "138" FILMOSOUND

Filmosound is sold complete in one case. In use the combined projector and amplifier unit is removed from the case, while the cover serves as the baffle for the self-contained loud-speaker. Two models are available, the 138A, with 500-watt lamp and two film speeds (for running either silent or sound films), and the 138B, with 750-watt lamp, which operates at sound speed only **£138**

MINIATURE CAMERAS, ENLARGERS, AND EVERY ACCESSORY ACTUALLY IN STOCK. SEE PAGE 1 OF THIS ISSUE FOR OUR OTHER ANNOUNCEMENTS. LISTS OF ANYTHING SENT FREE ON RECEIPT OF 2d. POSTAGE.



BY APPOINTMENT

BRITAIN'S FINEST FILM LIBRARY

Every latest title in 9.5 and 16 mm. silent and 16-mm. sound-on-film is included. Hundreds of new films (exclusive to Wallace Heaton customers) have just been added. The selection is the greatest you will find anywhere to-day. It is just as cheap to order them by post as at our counter, because the time taken in transit is deducted from hiring charge. Why not take advantage of this fine entertainment aid ?

EASY TERMS AND EXCHANGES

We give you nine months to pay, and you start using your purchase after making the first payment. No harsh formalities. Only 5 per cent is added to cash price—or 5/- if under £5. You can make your choice from the finest range of apparatus in the country. Why not let us have your used apparatus in part payment for your fresh purchase ? We make the trade's highest exchange allowances.

BOLEX D.A.

For both 9.5 and 16 mm. Films.

NIGHT PHOTOGRAPHY INDOORS

SELO LIGHTING SET

The Selo Lighting Set is of superior design and of especially strong manufacture and comprises an extra large spun aluminium reflector mounted on a solid stand, complete with Photoflood Lamp, 3 yards of flex and universal connecting plug. Price **17/6** Obtainable from all photographic dealers.

No longer must your camera be put away to "hibernate" during the winter. With the arrival of the long dark evenings it now offers you a new fascination — photography by your own fireside—picture-making in the comfort of your own home.

Ilford research, culminating in the introduction of reliable hypersensitive films and plates, has made this possible. Now, it is as easy to "snapshot" at home by night as outdoors on a sunny day, and to every camera user is opened up a vast new field of photographic enjoyment.

A 'New Deal'

for Amateur Photographers

How the above picture was made: 3 "Photoflood" Lamps in "Kodaflector" Reflectors were used as shown in diagram. Exposure: ½ sec. f11 on Kodak S S Pan Film.

Photography made easy at times when it used to be difficult and in places where it used to be impossible; placed on an all-through-the-year, all-round-the-clock basis; given the freedom of the home as well as of the field and beach — it is not too much to say that the introduction of Kodak Super Sensitive Panchromatic Film and the Kodak Night Photography Aids has meant a completely 'New Deal' for everyone with a camera. Have you taken advantage of them yet?

See your Kodak Dealer about the "Photoflood" Lamp (2/6); the "Kodaflector" Reflector (3/-); the "Kodaflector" Outfit, including Reflector, Stand, and 9 ft. of flex (7/6).

ARE YOU AWAKE..

TO YOUR POSSIBILITIES AS A SNAPSHOTTER ?

THEN ENTER OUR

"OPEN COMPETITION!"

for good photography by any amateur with any apparatus

If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Photographs must not be retouched or worked up in any way, except that simple spotting to remove pinholes is permitted. Enlargements, of course, are allowed—in fact we recommend an 8½ × 6½ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s. ; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

An exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners.

While we do not ***guarantee*** *to return prints, every endeavour will be made to do so when they are accompanied by suitably stamped envelopes.*

£25 FIRST PRIZE AND 21/- WEEKLY PRIZE

See that all prints have your name and address on the back, and that full postage is paid on the package.

ADDRESS YOUR ENTRIES TO "OPEN COMPETITION,"

NOT ONLY CAMERAS, BUT . . .

. . . We have, actually in stock, all the finest books and literature on every miniature camera. There is no reason why the new "miniaturist" should not be able to tackle the most advanced miniature work with the aid of these books. "The Leica Manual," for instance, contains nearly two hundred full-page illustrations of outstanding Leica photographs, with full technical data, and full information on night photography, street lighting photography and for stage-lit and all indoor subjects. Below are but a few of the books from our comprehensive range. Choose the one to suit your particular camera, and the versatility of your work will improve by leaps and bounds. Over 500 Leica accessories in stock, as well as the complete range for every other miniature camera.

The Leica Manual. 500 pages, 300 illustrations. **21s. 6d.**

Ski Kamerad Toni. By Paul Wolff. A similar book of winter sport pictures. German. **10s. 0d.**

My First Ten Years with Leica. By Paul Wolff. New English edition. 200 pictures with technical tables and reading. **21s. 0d.**

Leica Amateurs Picture Book. 160 pages of Leica pictures with some reading matter and all technical data. **21s. 0d.**

How to Use Your Miniature Camera. Contains 56 pages of illustrations and rudimentary instruction in loading and handling the Leica. **10s. 6d.**

The Exakta Handbook. Just published. All about the Exakta and its many uses. **3s. 6d.**

Portraiture with a Miniature Camera. By Minicam. **3s. 6d.**

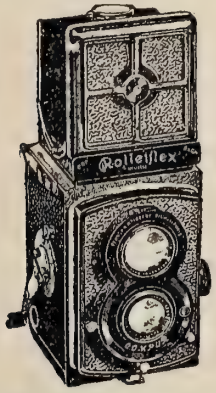
Rolleiflex does it again!

WINS "DAILY HERALD" FIRST PRIZE THE SECOND YEAR RUNNING

£3,000



FIRST PRIZE THIS YEAR for the Rolleiflex picture on the right—taken by Mr. F. H. Done, of Northwich.

£2,500

FIRST PRIZE LAST YEAR for a Rolleiflex shot—taken by Mr. R. Jenkins, of Bayswater.

The competition was open to any amateur, no matter what his camera, so the Rolleiflex beats all comers. To carry off the biggest prize in photographic competitions two years in succession is surely a record unparalleled in photographic history. No wonder the photographic trade is agog with this astounding news.

There is no doubt that the unique design and the marvellous versatility of the Rolleiflex enabled both Mr. Done, this year, and Mr. Jenkins, last year, to pull off these big prizes.

By permission of "Weekly Illustrated."

By permission of the "Daily Herald."

Rolleiflex is only a medium-priced camera. It has a one-lever Compur shutter speeded to 1/500th sec., T. and B., a Zeiss Tessar f/3.5 lens, and takes 12 pictures on 3¼×2¼ 8-exposure roll film for 1/-. As equally suited to winter photography as summer snapshots. And it costs **£25**. A large range of accessories include plate adapter, ciné-film attachment, stereo attachment, Proxar lenses, etc.

. . . and this

Rolleicord

PICTURE WON £100

"WEEKLY ILLUSTRATED" FIRST PRIZE

It was taken by Mr. K. M. Kershaw, of Newcastle-on-Tyne. Congratulations are due to Mr. Kershaw, of Newcastle-on-Tyne, not only on his superb picture, but on his discrimination in choosing the right camera. Messrs. Jenkins, Done and Kershaw must be very grateful to their cameras for these considerable prizes.

Rolleicord, with Zeiss Triotar f/3.5 lens..... **£17:10:0**

Rolleicord, with Zeiss Triotar f/4.5 lens..... **£14:10:0**

ENSIGN

MAGNAPRINT ENLARGERS

NEW MODELS

WITH FRICTION DRIVE RAISING MECHANISM

These new models in the Magnaprint Range incorporate a new and most efficient type of raising mechanism.

The body is moved up or down on the standard by a friction drive operated by a large white knob. Fine focussing is then carried out by the helicoidal lens mount which is provided with a large knob which locks it firmly in position at the required point, the scale ranging from ¼-pl. up to 15 × 12 size.

The super speed condenser, combined with diffused lighting, ensures perfect quality grainless enlargement from even the smallest negatives, together with exceptional speed.

For all sizes up to 2¼ × 2¼ in. (6 × 6 cm.). Fitted with 4-in. Condenser. Enlarges 2¼ × 2¼ up to 15 × 15 in., other sizes in proportion.

Model V/10, with ENSAR f/6.3 enlarging anastigmat .. £7 15 0

Model V/10M, with MAGNAR f/4.5 enlarging anas. £9 10 0

For all sizes up to 2¼ × 3¼ in. (6 × 9 cm.). Fitted with 4½-in. Condenser. Enlarges 2¼ × 3¼ in. negatives from P.C. up to 15 × 12 in. Smaller size negatives in proportion.

Model V/11, with ENSAR f/6.3 enlarging anastigmat .. £8 10 0

Model V/11M, with MAGNAR f/4.5 enlarging anas. £10 0 0

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

ZEISS IKON

Interchangeable ZEISS LENSES

focussed by coupled distance meter are the key-note of the new Zeiss Ikon Nettax. The Nettax, while not so versatile as the Contax, nevertheless provides a choice of wide-angle and long-distance Zeiss lenses to be used interchangeably with the standard Zeiss Tessars of f/3.5 and f/2.8.

THE NETTAX

has the all-metal Contax type incorrodible focal-plane shutter speeded from 1/5th to 1/1,000th second, and the back is detachable for cleaning, and is designed to take a plate back.

The Nettax is £11 5s. 0d. cheaper than Contax II, and it will appeal to those requiring an instrument providing interchangeable lens facilities, but without the extensive selection available with the Contax.

Ask for our new publication, entitled "Unfettered Photography," post free on request, and your dealer for a Nettax demonstration.

WEDNESDAY, NOVEMBER 11TH, 1936.

Copyright—Registered as a Newspaper for transmission in the U.K.

VOL. LXXXII. No. 2505.

TOPICS of the Week

WE are glad to hear from so many readers that *The Amateur Photographer* Diary for 1937—recently published, is being so well appreciated. It meets the need for a handy pocket-size book that not only contains the usual diary spaces and a useful exposure guide and record, but also a very complete series of practical formulæ for general use and with standard materials. As the amateur's constant companion it will more than repay its nominal cost of 1s. 6d., as a great number of the problems that the worker will encounter when taking photographs or in developing and printing, etc., are dealt with in its pages. Those who have not already seen "The A.P." Diary should ask for it at their newsagents, bookstalls or dealers. We have no doubt they will want to secure a copy as soon as they see it.

A New Agfa Process of Colour Photography.

As many of our readers are aware, the Agfa factory has produced for a number of years a special "lenticulated" colour film, which was based (as were also a number of other similar processes) on an invention of Berthon. This process requires special camera and projector filters to produce the coloured images, so that specially designed apparatus was needed for satisfactory results. A new process has just been announced by the firm, and the difference between the new Agfa chemical process and the Agfa lenticulated film is that in the case of the former it is possible to use the film without any modification of the optical equipment of the camera or projector. Any amateur can thus get satisfactory results from the process. Moreover, it is possible to examine the colour images direct with the naked eye, which was not possible in the Berthon lenticulated film process, for the new film is coloured instead of being black-and-white. Since there is no necessity to use a heavy filter with the new material, the sensitivity of the film is increased in practice, and the actual camera exposure required for it will be very much the same as that used for the normal amateur reversal films. For projection, too, no colour filter will be required, as the image is pure colour with no black silver whatever. Further details of the new process will be given later.

A NOVEMBER DAY IN TOWN.

See article in this issue on "November Mist and Picture-making."

The P.D.A. Dinner.

The happy and prosperous state of the photographic trade was reflected in the Annual Dinner of the Photographic Dealers' Association, held on Wednesday of last week at the Park Lane Hotel, London. Over 500 from all parts of the country were present, including representatives of every branch of the photographic industry, with Mr. J. Lancaster, of Leeds, President of the P.D.A., as chairman. Many ladies were among the guests, and the function—which was followed by a cabaret and dance—was a brilliant success. Lord Dunedin, himself an amateur photographer of very long standing, replied for the guests, and during the evening a handsome presentation was made to Mr. Wallace Heaton on his retirement from the office of Hon. Secretary. Much of the present success of the P.D.A. and of these annual gatherings, which have steadily increased in size and importance from year to year, has been due to Mr. Heaton's untiring work on behalf of the Association.

So Many Uses.

Just two examples of uses of photography that a rambling journalist heard about on the same day. One was at the recent National Smoke Abatement Conference at South Kensington, where Dr. J. S. Owens, in describing the investigation of atmospheric pollution, mentioned that for ascertaining with reasonable accuracy the effect of city smoke in robbing us of health-giving daylight and ultra-violet, the action of light on photographic paper was the most helpful method. A piece of sensitised paper is exposed to the light under an opaque plate, perforated with a line of small holes, above which is an optical wedge of neutral-tinted glass which allows light to penetrate in a gradually increasing quantity from one end of the wedge to the other. By counting the number of spots appearing on the paper a measure of the amount of light is obtained. The other instance was given at a meeting of the Institution of Mining and Metallurgy, where an engineer described how on the Rand photography is used in the endeavour to obtain some knowledge of the direction of the dip of underlying beds. After making a bore-hole, a photographic record is made simultaneously of the orientation of the scoremark of the core, the deflection of the borehole, and the magnetic direction and so on.

Photography in National Parks.

An Oxford student making a grand tour of America sends us some literature about the Yellowstone National Park, a vast reservation in Wyoming about equal in area to the counties of Lincolnshire and Leicestershire combined. One feature of the literature is the way in which the American authorities look after the interests of visiting photographers. They give directions as to the various places in the park where there are photographic laboratories, as they call them, and where the photographer can get all the dark-room and printing-bench service that he wants. In addition the places are specified at which photographic material can be purchased, and, of course, the shops and the stands in the hotels and lodges where the visitor without a photographic outfit can buy prints, enlargements, plain or coloured lantern slides, and even motion-picture films. The Americans at least are wide awake to the value of the tourist photographer as an advertising agent.

Wanted—the Picture.

Some people say, in these days of wireless, that they prefer to listen rather than to see. They would rather hear the Coronation at their sets than catch a glimpse of it. They have learned, from the perfection of the apparatus of listening, how to reconstruct the scene from their imagination. Frankly, we are sceptical of all this. Listening is an unsatisfactory substitute for seeing, and always will be. A glance at a photograph of a man we have never seen tells us far more about him than a talk on the telephone. A photograph of a landscape tells us what can never be conveyed in a description, because words can only present the facts one after the other, whereas a picture presents all the facts together in the places and relations which nature gave them.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Blue-Black Slides.

I have tried to get blue-black lantern slides for winter subjects, mist effects, etc., by using thiocarbamide, but find the results uncertain. Can you suggest a more reliable procedure?
P. S. A. (Deptford.)

Probably the finest slides in blue-black and blue-grey have been produced with thiocarbamide, but even in the most experienced hands the process is "tricky." Even slight variations in temperature make great differences in the results, and the element of chance seems to play an unusually important part.

Some years ago Mr. J. J. Hartley described his method of producing the fine slides, often of snow and frost subjects, which gained him many awards, and which were, no doubt, just the sort of thing at which you are aiming.

It may seem strange that warm-tone lantern plates should be used, instead of black-tone plates which would apparently be more promising for the purpose. Instead of using one of the developers recommended for producing warm tones, however, the following single solution is substituted. An exposure is found that will give a black-tone image, with full detail, but on the soft side, as the after-treatment results in considerable intensification, and this must be allowed for.

The developer formula is:—

Metol	50 grs.
Sodium sulphite	500 grs.
Sodium carbonate	500 grs.
Hydroquinone	40 grs.
Potassium bromide	25 grs.
Water to	20 oz.

The slide is fixed and washed as usual. The washing must be very thorough, as the least trace of hypo will cause trouble during the next operation—that of bleaching and redeveloping.

In 10 oz. of hot water dissolve ½ oz. of mercury bichloride, and let it stand till cool. Decant the liquid, leaving the sediment behind, and add 30 minims of hydrochloric acid. The solution is a powerful poison. Pour some of this solution over the slide, rocking the dish at intervals until the image is white right through to the back.

Rinse the slide well, and redevelop the image with the same developer as before. It will be blue-black, but on the strong side, and lacking in brilliance and transparency. The final stage is to clear it with Farmer's reducer. This is plain hypo, say, 4 oz. to the pint, to which, immediately before use, enough potassium ferricyanide solution has been added to make it a pale yellow colour. The slide soon clears and brightens, but great care must be taken not to continue the action long enough to remove delicate light tones, or the effect will be spoilt.

Spotting Lantern Slides.

Do you recommend white ink for spotting and titling lantern slides? If not, what is the best alternative? R. T. (Durham.)

White "ink" is quite commonly used for these purposes, but it must be a good brand. Some whites soon powder with the heat of the lantern, and particles shake down on to the image and make serious blemishes on the screen. Many slide-makers use discs of white paper. If there is room on a black mask to write in white ink, there is room to stick down a slip of white paper and write in black.

In our opinion there is nothing to beat spot binding strips. One strip in four is printed with spots, two coming on the face of the slide and two on the top, and also with blank spaces for numbers, short titles and name.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Successful Free-Lancing

By GEORGE L. WAKEFIELD.

Some practical hints on a subject that always makes a great appeal to the amateur photographer.

THE requirements of a photograph intended for submission to a newspaper or periodical were summed up by the representative of one of the large photographic agencies. He said that a picture must have human interest, and tell a story without the aid of a lengthy caption. Attractive pictures of animals and children " doing something " are nearly always sure of a market.

The making and marketing of prints for reproduction is as absorbing and important an occupation as the selection of suitable subjects.

The Right Sort of Print.

Always make glazed black-and-white prints, and wherever possible they should not be less than whole-plate or 10 by 8 inches. For specially interesting subjects, 12 by 10 inches, or even larger, is not out of place. While a print will never sell on account of its size alone, editors are only human, and are naturally attracted to a big print.

The beginner is often given the advice to make his prints strong and contrasty for Press purposes. It should be noted, however, that contrasty does not mean black, choked-up shadows and bald high-lights. The shadows should be rich, with plenty of detail, and the high-lights bright; between these extremes should be a full range of half-tones. This ideal can only be attained by the use of the correct grade of paper for the negative, and full development of the print.

A wide white border serves another purpose beyond mere decoration. A print that has been through the post several times often becomes a little damaged at the edges. In such a case, a narrow strip can be trimmed from each edge, and the photograph restored to its pristine tidiness.

The Back of the Print.

Your name and address should be on the back of each picture, but the caption should be on a separate slip of paper, pasted by one edge only to the back of the print. This enables an editor, if he wishes, to scrap your caption and provide one of his own to fit in with special circumstances.

When writing name and address on the back of a print always use a soft pencil and write lightly with the print face down on a hard, smooth surface, otherwise the writing may be visible on the front of the glazed print and spoil it for reproduction.

To prevent prints being damaged in the post, use stout envelopes of ample size, and enclose a sheet of stiff card, half an inch smaller all round than the envelope. Always enclose a stamped, self-addressed envelope for the return of pictures in the event of their being unsuitable.

A long letter is unnecessary when submitting photographs. A note on these lines is sufficient :—

The Editor.

Dear Sir,

I enclose herewith a photograph which perhaps you might find suitable for publication, at your usual rates.

Yours faithfully—

The Best Markets.

Now for the selection of markets. This is most important. Many an excellent photograph has been returned with thanks, not because it is a failure, but because it has been sent to the wrong paper. A useful market guide for the budding free-lance is the *Writers' and Artists' Year Book*, published at 3s. 6d. by Messrs. A. & C. Black. It contains a full list of papers and periodicals, both British and American, with a summary of their editorial requirements, as regards articles and illustrations.

Helpful as this book is, however, it cannot replace an actual study of the papers to which you intend to submit prints. The news room at the public library is an ideal place for this, and by spending a few hours noting briefly in a notebook the characteristics of the various papers, many of those terse and disheartening rejection slips can be avoided.

Topicality.

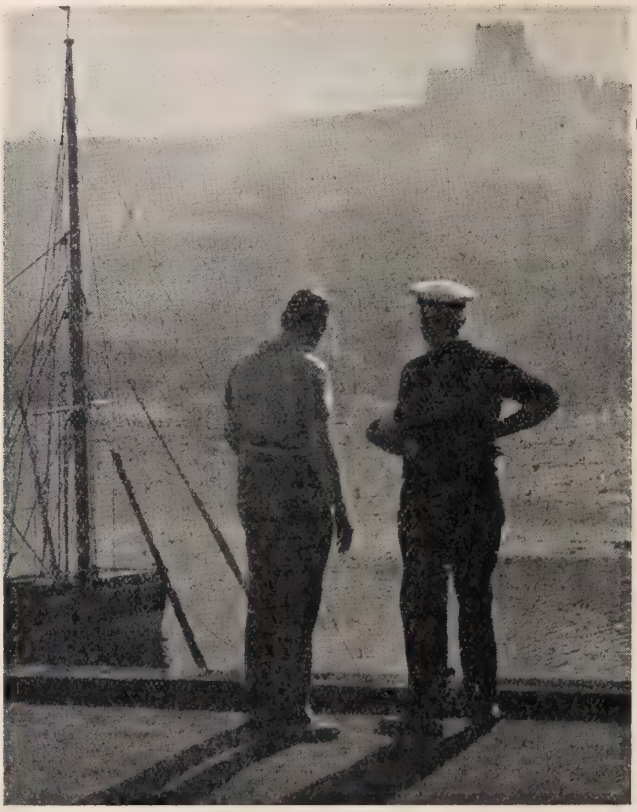
Notice particularly how the different papers treat the captions to their illustrations, and watch how all of them try to infuse a touch of topicality into the most mundane of subjects. Topicality is the flesh and blood of all newspapers, and the simple subject that is useless as a Press picture to-day may, owing to its suddenly becoming topical, be news to-morrow. A commonplace landscape may become saleable many times if the site of the photograph is bought by the National Trust, or if archæological discoveries are made in the vicinity. Try and cultivate a news sense in these matters, and you will reap many useful guineas.

You will need a print record book, which can be an exercise book ruled in columns, and in this, note the date, and the title, and paper to which each print is sent. When sold, or rejected, note these particulars also.

It is wise to keep a note of all expenses, such as photographic materials, postage and stationery. This enables a clear idea to be obtained of your profits, and is also useful when sending in Income Tax returns.

Series.

Now a few words about series. A series of pictures often sells better than a single picture. Let us say, for example, that you have a good print of a litter of puppies. It may be a perfect photograph, but as there are so many of the same kind of subject, you might find difficulty in selling it. If, however, you have a series of the same litter, showing pictorially, say, a day in their life, you would find it easy to sell several, or all, of the prints to widely differing papers. A paper often devotes the whole of its back page to a series of pictures, and the free-lance can often supply them.



Specialising.

If you specialise in a particular branch of photography, say the study of bird life, you have excellent opportunities for making interesting series. Not only would scientific journals print them, but, happily captioned, they would appeal to the readers of daily and weekly papers.

Practical " how-to-do-it " pictures have a ready sale with the practical periodicals, either as series or as single pictures. Gardening, motoring, home-making, and radio, are only a few of the many subjects which lend themselves to such work. Your own hobbies will suggest plenty of ideas.

There is no infallible recipe for success in the thrilling game of free-lancing, but if you can make pictures of humanity going about its daily work and recreation, and will give a little thought to the writing of captions, you are well on the road to publication.

A scrap-book in which to keep reproductions of your work will not only be useful as a record of your success, but will act as a tonic in lean times.

Mist in the Harbour.

November Mist

By DONALD G. SHELDON.

WHATEVER photographers may think of the shortcomings of our climate, the regular occurrence of mist in autumn is a compensation which is lacking in many drier and sunnier regions. There is a world of difference between the harsh glare and inky shadows of the Tropics and the pearly glow and delicate half-tones of a misty morning in this country.

In our early photographic days we seldom appreciate how valuable an ally mist is. We regard "clearness" as the chief of photographic virtues, and the more detail we get the more pleased we are. It is when we have passed beyond this stage that we realise that an "effect" is better than mere wealth of detail. When we have learnt to sacrifice the detail for the sake of the effect, we are well on the way to success in picture-making.

When mist is present, near objects stand out boldly from a delicate background; those farther away appear successively paler on account of the increasing thickness of the intervening layer of mist. The scene appears divided into "planes," giving an almost stereoscopic effect. Only the near objects show detail; those more distant are "massed" into grey shapes, but are still sharp in outline.

This effect is very beautiful, and when we photograph it a smallish stop should be used so as to retain the sharpness of distant outlines. It is quite different from the results obtained by "differential focussing" with a large aperture; this will certainly show detail in near things and make them stand out prominently, but the background is often degraded into a meaningless and irritating blur.

A Misty Evening in the Suburbs.

Another valuable property of mist is that the colours of all but the nearest objects are subdued. Most of the scene will appear to be composed of varying depths of grey tone, almost as it will be shown in the print. This almost monochrome appearance destroys the deceptive lure of colour, which so often leads us to waste films on subjects unsuitable to photographic representation.

These properties of mist enable us to obtain pleasing pictures of many scenes which would be hopelessly ugly in the revealing

The Fountain.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

and Picture-Making

glare of a mistless day. Hackneyed subjects take on a new glamour when photographed in the soft sunshine of a misty morning. The simplification obtained by "massing" will often allow us to create bold patterns where there would normally be a jumble of discordant details.

The finest mist effects are got when there is sunshine, especially when the camera is pointed towards the sun. For this *contre-jour* lighting a lens-hood is advisable; but there is little fear of fogging, since the veil of mist scatters a good many of the rays which might prove too strong in a clearer atmosphere. For this lighting the exposure should be doubled, as we are photographing the darker side of the objects shown. Across the reflections of sunshine a foreground of water or wet pavements will often make subjects in themselves, especially when darker objects are silhouetted against them.

The Sun breaks through.

Mist in Dockland.

If possible, the scene should be so arranged that some prominent object is shown fairly near the camera, where it will act as a foil to the background of delicate greys. In a *contre-jour* lighting, these objects cast shadows which are valuable for filling an otherwise empty foreground.

Every photographer has seen and admired the effect which often occurs in churches, where a shaft of sunshine, entering by some upper window, crosses the building like the beam from a motor-car headlamp, and illumines a pillar or other stonework. The beam is shown up against darker surroundings by the slight dust suspended in the atmosphere, and was often "assisted" by photographers of the older school who shook a mat or other dusty object in order to increase the amount of floating dust. This effect can often be caught when photographing amongst trees on a misty day, when the sunshine is broken up by the foliage into shafts of light which the mist emphasises.

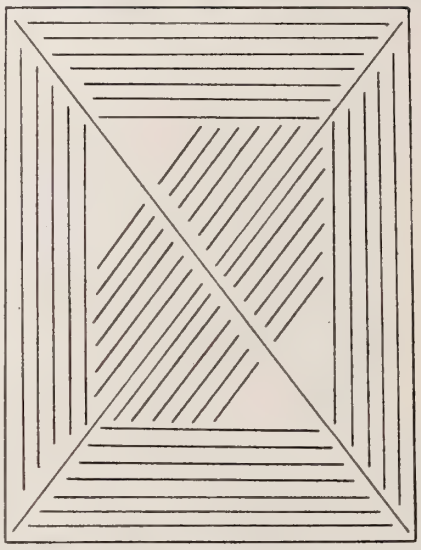
Orthochromatic materials serve admirably for mist photography. Since the colours are subdued there is little to be gained by using panchromatics (one of the rare occasions when this can be said); and ortho materials will render the scene pretty much as the eye sees it. It is advisable, however, to use backed plates or one of the 'chrome films, so as to lessen the chances of halation if a *contre-jour* lighting is employed. No colour filter should be used, as this would cut out much of the haze on which the effect depends.

Exposures should be generous, for with any trace of under-exposure the contrasts of the picture would be too harsh and the delicacy of the effect would disappear. This is especially the case when near objects are included, as they will be shown as black silhouettes if under-exposed. There is little excuse for under-exposure nowadays, for the speed of several of the 'chrome films is very high. Still, as a reserve it is a good plan to carry a tripod so that brief time exposures may be given if necessary.

Mist and Sunshine in Old York.

Develop for no more than two-thirds the normal time, or the delicate gradations of the misty background will be destroyed. Even after this curtailed development it will probably be found best to print or enlarge on a soft grade of paper, for too vigorous a paper will not render properly the full delicacy of the lighter tones.

We can sum up the secrets of successful mist photography in a brief and easily memorised note: "'Chrome film, no filter, full exposure, short development and soft printing paper." Add to these the ability to see the pictures when mist makes them, and there is nothing more to be said.



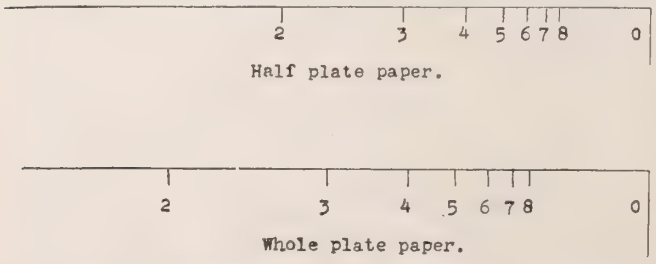
Readers' Hints, Tips and Gadgets

HAIR-LINE FOCUSSING.

THE use of a focussing screen when enlarging enables the best to be obtained from a negative when detail is the first consideration. I have used one, made as described below, during the past few months, and found it entirely satisfactory.

After soaking an old glass negative in hot water for a few minutes, remove the emulsion with a safety-razor blade and a piece of clean cloth. After drying, apply a coat of clear, liquid gum to one side, and place lengths of human hair in various positions on the gum as shown in sketch. Then put the screen away for a few days in a horizontal position to get thoroughly dry and hard.

Roughly focus the negative on the easel, remove it from the carrier and replace with the screen in the same position and facing the same way. If the negative is on a glass plate, it is only necessary to put the focussing screen into the carrier so that the side bearing the hair takes the place of the emulsion side of the negative. If, however, the enlargement is being made from a film, some care is necessary. To remove the film, together with the two pieces of glass between which it is sandwiched, and to put the screen in the place of the whole is not correct, for this will put the hairs at a different distance from the lens than was the image. The film must be removed, together with the sheet of glass next its back (shiny side), and the screen must be placed in the carrier with the hair side resting on the glass which previously supported the front (dull side) of the film.



Now carefully focus up and adjust the carrier or easel until the hairs are clearly defined over the whole of the enlarging area. After replacing the screen with the negative make the exposure in the usual way. The enlargement will then show all the fine detail contained in the negative.

C. M. CROSBY.

AN ENLARGING AID.

MANY semi-automatic enlargers on the market now are fitted with duplicate scales showing the degree of enlargement, pointers on the lens mount and lantern being set to the same figure to ensure sharpness of focus. Unless the degree of enlargement required is known, this system necessitates either a certain amount of trial and error work with the enlarger itself, or preliminary measurements on the negative and subsequent arithmetical calculations.

If a series of scales is made according to the design shown here, the degree of enlargement necessary to bring any picture up to any of the standard paper sizes may be read off directly from a contact print using the appropriate scale. Each scale is made on cardboard named with a standard size of paper, e.g., whole-plate, but the points on it are marked with enlarging ratios instead of inches. Thus, since whole-plate paper is $8\frac{1}{2}$ in. long, the point $4\frac{1}{4}$ in. from the zero is marked $\times 2$, the point 2.83 in. from the zero (i.e., one-third of $8\frac{1}{2}$ in.) is $\times 3$, and so on. Similar scales are made for other standard sizes of paper as required.

To use the scales, contact prints from the negatives to be used in the enlarger are needed. A print is taken and masked in the usual way with L-shaped pieces of card until the required picture is isolated. If this is to be printed, say, half-plate size, the scale marked "half-plate" is used to measure the length of the picture enclosed by the masks, and instead of the actual length in inches, the degree of enlargement is read off directly.

A certain amount of experienced judgment is required to ensure that the picture will not be too wide for the paper chosen, or a set of scales may easily be made to measure the width magnification as well as that for the length. It is then merely necessary to see that the width enlargement is not greater than the length, otherwise a larger sheet of paper must be chosen and masked. Photographers who habitually mask their prints will obviously need to rule their scales to fit the slightly reduced dimensions of the space available for printing.

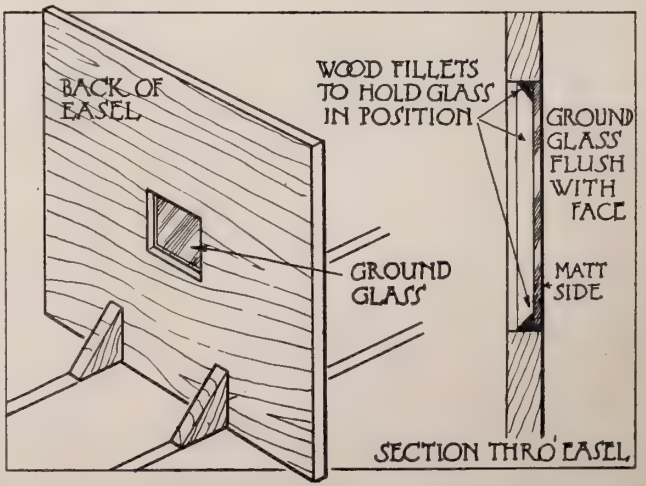
M. L. HASELGROVE.

AN AID to ACCURATE ENLARGER FOCUSSING.

IN order to make perfect enlargements the focussing must be carried out accurately, but this is not always an easy matter.

The device described here, however, will be a great help in accurate focussing on horizontal enlargers.

A small section, say about $3\frac{1}{2} \times 2\frac{1}{2}$, must be cut out of the centre of the focussing easel of the enlarger.



In this is placed a piece of ground glass of the same size and fastened in place so that the matt surface of the glass is flush with the inside of the easel, i.e., the side on which the bromide paper is pinned.

The focussing is carried out in the usual way on the white surface of the easel, and in order to ascertain whether the image is dead sharp it is viewed on the ground glass in the same way as a focussing screen of a plate camera. That is, the image is viewed from the back of the easel.

The ground glass can be effectively held in place by fixing a framework of four thin strips of wood behind the glass.

If a strong glue is applied to the framework, and the glass pressed tightly against it, it will hold in place quite well.

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

PRESS PHOTOGRAPHY *with a Miniature Camera*

By JAMES JARCHÉ.

SPEAKING as a press photographer —and press photography is entirely different work from ordinary photography—I find after twenty-nine years of Fleet Street experience that the miniature camera is the finest outfit for the news-picture man.

Of course, we have not yet the perfect camera for the purpose. Miniature cameras to-day have what I consider to be drawbacks, such as range-finders, noisy shutters, slow loading devices . . .

Mr. Maxton speaking at a Literary Luncheon on "If I were Dictator." 1/8th sec., f/2, Super Pan. film.

and others which would take too long in this short article to explain. At the same time they have advantages for the press photographer which no other camera can give.

I have been using the miniature camera now for about two years, and I find one of its chief advantages is that it enables you to take pictures of people without their knowing. . . . For example, I took a very good series of Mr. Bernard Shaw in his study, and when I had got enough pictures of him I let him see that I was trying to take pictures of his room. He amazed me by saying: "Hello! You have got a Leica camera there?" I said, "Yes, Mr. Shaw, I am experimenting with this." He replied, "I have two, but I cannot get good results, and I am positive you will not be able to take pictures in this room."

He must have been astonished when he saw in the *Weekly Illustrated* a full page of pictures of himself talking to the literary editor of the *Daily Herald*.

To cover the sound of the shutter each time I made an exposure I had to cough—and you can imagine how difficult it is to hold your camera still for one-eighth of a second exposure and cough at the same time.

Another occasion when I found the miniature camera very useful was in the paddock at a fashionable race-meeting, where press photography is not encouraged. The camera held in the usual way looks somewhat like field-glasses, and all the time I was taking pictures I was chatting to a policeman, who every time I put the camera to my eye thought I was having a look through binoculars. Thanks to this, I was able to obtain a page of "Fashions at Ascot."

Again, in the studios at Elstree, when Elizabeth Bergner was making the film "As You Like It," I was able to secure several good press photographs with my miniature camera and Summar lens at f/3.5 aperture, and shutter at 1/30th of a second. Immediately after the shot the camera disappeared into my specially-built poacher's pocket, until wanted again.

I had great opportunities when I had H. V. Morton in my car on his trip "In Search of Wales" and "In Scotland Again." It was then that I could have used a miniature with the greatest effect if I had known their capabilities, but unfortunately at that time I thought it was almost impossible for anybody to produce work good enough for newspaper reproduction with a miniature camera.

A life-saving demonstration as seen from under water. 1/100th sec., f/6.3, Super Pan. film.

Elizabeth Bergner in "As You Like It." 1/30th sec., f/3.5, Super Pan. film.

I went on a trawler in the North Sea, and, believe me, they were "seas." I went down a coal mine in South Wales, where, if I had had a miniature camera, I could have produced some of the most remarkable pictures ever taken below the surface of the earth. . . . Perhaps such opportunities will occur again!

When I was writing my book "People I have Shot," I asked Mr. Hannen Swaffer to write the foreword, and in a very dimly-lit room, whilst Swaffer was dictating the foreword to his secretary, from a sitting position with my Leica on my knee I was able to hold a half-a-second exposure at f/2—and Swaffer did not know it, until he saw his own portrait as frontispiece to my book.

It will be seen from this that the miniature camera has placed a new power in the hands of the press photographer and enables him to secure subjects that would be impossible with the usual press camera.

Perhaps the most interesting thing of all in miniature photography is that one has to start again from the beginning. I mean that though the ordinary rules of photography, such as light facts, temperature, and dark-room procedure, etc., still hold good, you need something else as well. Special methods of development must be studied and you have to know your camera thoroughly, and exactly what it is capable of doing. With a modern "precision" miniature, the finest results are only to be obtained in this manner; and when you have a camera and materials you understand—stick to them.

Interiors with a Miniature

TO catch the atmosphere as well as the furniture and to include figures in a room lit in the way that is familiar to all who use it, usually means a very long exposure, or a miniature camera.

With great depth of focus at relatively large lens stops the miniature camera offers great scope for dealing with this problem satisfactorily; but it must be remembered in the absence of a rising front or swing back, the question of correct uprights is of paramount importance.

There are occasions when the camera can be pointed at an angle to advantage, but to do it in a way that will produce slightly convergent lines will generally mean adverse criticism.

A Difficult Interior.

Average well-lit interiors usually require relatively slow exposures, even with a miniature camera, and, due to the small size of the negative with correspondingly big enlargements, there must be no chance of camera movement. As a rule, a tripod is not necessary; there is often a door frame, wall, or other upright that can be utilised to rest the camera against.

The accompanying illustrations were taken on 35-mm. panchromatic film in this way with an exposure of about ¼ of a second at f/4.5. The great depth of focus at this stop can be seen, and the fact that no artificial light has been used means that there are no conflicting shadows.

When interiors are taken at night, the camera should be arranged as far as possible to avoid the inclusion of the light source. It is often helpful to employ a photo-flash bulb, and switch on the ordinary lighting for a fraction of the exposure. In this way it is possible to arrange the flash to give a general lighting, and still retain the character of the usual lighting without over-exposing the high-lights in relation to the shadows.

When planning the composition, bear in mind that bold shapes will help to knit the picture together, and simple direct lighting tends to give the maximum reality. Look out for bad reflecting surfaces, and try not to include in the same photograph both brilliant light through a window as well as dark recesses.

BERNARD ALFIERI, JUN.

Carrying a Miniature

OWNERS of miniature cameras have frequently had pointed out to them the many advantages which they hold over those possessing the larger type, and not the least of these is the ease with which a small camera may be carried about. It may seem that always to carry a camera weighing one pound or thereabouts is no easy matter, but if the method illustrated be adopted there should be no difficulty.

All that is required is a leather strap and spring clip. The latter is clipped on to the carrying-handle, the strap slung over the right shoulder and the camera placed in the hip pocket. In this way the strain is taken off the pocket, and the presence of the camera is hardly noticeable. With the coat on it is invisible, and if the depth of the camera is no more than about one inch there is no bulge to disclose its existence. The very compact miniature can be placed in the waistcoat or coat pocket without pulling it out of shape, but the hip-pocket method has proved very efficacious for those which are too large for this method of transport.

Camera in Hip Pocket.

Should the strap tend to slip off the shoulder a shoulder-loop could be sewn on to the shirt or waistcoat and the leather strap kept in position by that means. Alternatively, the pad produced by a well-known concern to prevent camera-straps from slipping could be used. The leather strap should be of sufficient length to permit the use of the camera without the necessity of its being unfastened, though with the spring clip it is in any case a simple matter to detach it.

Finally, it is an advantage to leave the camera as nearly ready as possible. The best way of doing this is to focus it for an average distance—say, 20 ft.—and stop down to f/8 or f/6 in the winter and leave the shutter ready to set at 1/25th.

F. C. COLE.

The Non-Miniaturist

A Fable in Rhyme

HIS eye was wild but firm his hand,
As slow he strode across the land;
About his neck a leathern strap
And on his head a sporting cap.
When lo! A view (so fair a scene
To photograph, had never been)
Unfolds before his ravished gaze.
He justly gives it naught but praise.
The "human element" is near,
An aged peasant, full of beer.
A "foreground feature" also, bright,
Outlined with all the midday light
He sees. He swiftly steps aside,
"The intersecting thirds," he cried.
His calculator opes with haste,
He turns the discs, the minutes waste.
Exposure time soon known, he draws
His reflex from its case, a pause
While he erects his tripod there
And levels it with rapid care.
Now levers move and screws revolve,
Stop, speed and distance all dissolve
The quickly fleeting moments; soon
The "human element," near noon
Strolls off for beer. Behind a cloud
The sun departs, nor is allowed
To reappear. O what a sigh!
His cam'ra's ready 'neath his eye;
His scene has gone. His trembling hand
Repacks his reflex, folds away
His tripod. Then upon his way
With furrowed brow and look of pain
He strides, with wand'ring eyes, again.

R. ACHESON CROW.

When enlarging, it may take ten minutes to focus and arrange the picture, and to make a test-strip for determining exposure and grade of paper. But it only takes ten seconds to expose your print. So make NOW all the prints your friends are likely to demand, with one over for yourself.

If it takes three minutes to develop an enlargement, it also takes three minutes to develop six, if you put them all in at once.

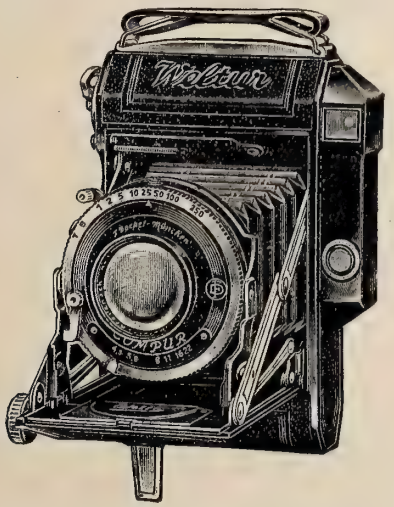
But if over-exposed, so that it takes only a minute and a half to develop, it will take nine minutes to develop six; because unless individually watched they will go too dark. Also, being overexposed, they will be bad prints.

From which we conclude that correct exposure saves time, as well as improving prints.

Stains are not due to exhausted hypo, but to exhaustion of the acid in the hypo, which is used up by developer carried over. Rinse, therefore, between development and fixation. Also, since metabisulphite is cheap, you can always put in an extra supply for luck.

A fine-grain developer that you know well is a better developer—for you—than a finer-grain developer that you have never tried.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER



Modern Miniature Cameras

THE WELTA "WELTUR" CAMERA.

THE Welta "Weltur" camera takes 16 pictures 1-11/16ths × 2¼ in. on an 8-exposure roll of 3¼×2¼ film. Its over-all size is 5½×4×1⅞ in., including all projections.

This camera is a *de luxe* model of its class and has a coupled range-finder combined with the view-finder. On looking through the view-finder, which is of direct-vision type and reduces by a little less than two diameters, the view is seen lightly coloured yellow, except for a small disc in the centre. It is within this disc that the image is seen double until the focussing is correctly adjusted.

Focussing is performed by a rack and pinion movement, which carries forward a sliding baseboard bearing the lens front. The back of this baseboard is attached to a lever which operates the range-finder

which appears to be of the tipping mirror type. The base of the range-finder is 1⅛ in., and its accuracy is sufficient to detect with certainty a change of distance of 6 in. at 10 ft. The depth of focus of the lens fitted, even at its full aperture of f/2.9, will cover an error of just double this amount, so that in spite of the fact that the range-finder shows a diminished image it remains amply accurate.

The camera is scaled in feet from infinity to 4 ft. It actually extends a little past this latter point and appears to focus to one metre (39 in.). Although not marked on the scale the range-finder, of course, allows for focussing to this distance.

The camera is self-erecting, opening to infinity at a touch on the button. It always does open to infinity, for wherever the focussing may have been left it is sent back to the infinity position on closing the camera. We were glad to note that the front of the camera when opened is extremely rigid.

The back of the camera hinges open for loading and reveals two swing-out spool-holders fitted with automatic grips for the spools. Care has evidently been taken in design to keep the film flat, for each spool-holder contains a tensioning spring, and there is a pressure-plate decidedly wider than the picture which holds the film close up to the picture-aperture.

As always with the sixteen-exposure cameras two red windows are provided. These are fitted with sliding covers, both of which are simultaneously withdrawn by moving a small button along a slide. A depth-of-focus table in feet is attached to the top of the range-finder and is used in conjunction with the scale of distances, which shows through a small aperture in the baseboard immediately in front of the lens.

The camera is available with the following four lenses, all of 7.5-cm. focal length:—

F/2.9 Radionar, at £17 17s. 6d.
F/2.8 Xenar, at £19 17s. 6d.
F/3.5 Tessar, at £18 10s. 0d.
F/2.8 Tessar, at £22 19s. 6d.

All the above prices are with standard delayed-action Compur shutter, but the Compur Rapid shutter may be had instead at an extra charge of £1 8s. 6d.

A wire release is included in the price of the camera, together with a small but very informative handbook.

The Welta cameras are marketed by Messrs. Peeling and Van Neck Ltd., 4–6, Holborn Circus, London, E.C.1.

Miniature Camera Gossip

By LANCELOT VINING.

THE miniature camera opens up so many new and unlimited fields for exploration that winter will become as busy a time as the summer, and I quite expect to find future exhibitions will show many more winter subjects (both in and out of doors) than they have done in the past.

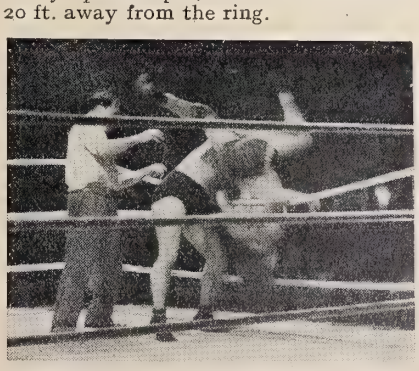
Eyesight Worry.

Are you worried with having to wear glasses when using your camera? I am. I need glasses for setting my lens and shutter, but not for using my range-finder. My greatest trouble is when I am working in a theatre; I am continually taking my glasses on and off to keep pace with the changing light. Sometimes they reach the breast-pocket of my coat as intended, at others they land on the next person's lap, and they have many times been rescued from the floor.

Mr. Bertram Park has altered all that for me, and I now work in comfort. I met him at a dress rehearsal one evening and noticed that he was wearing glasses with half-lenses in the lower half of the frame. I at once had a pair made and now find the lens is in the right position when I look down at my camera, but no longer in my way when I use the range-finder (see illustration).

Using camera with half-lens glasses.

Cleaning.



Range and view finder lenses require to be constantly kept clean; this is not an easy matter, owing to their small size.

Try this. Buy a packet of a dozen drawing stumps (small size) and always carry one in your waistcoat pocket. It lasts a long time and does its work well.

Condensation.

Watch for this nuisance during the winter when working indoors. I went into Lane's Club recently for an all-in match and had not been in my usual position long when I noticed a man sitting two rows in front kept looking round, as I thought, at my camera, but I am quite used to this, as the wretched chromium plate catches everybody's eye. Presently he pointed at my camera, and as I am often asked what stop I am using, I called out "f/1.5." He shook his head, so I called out "Contax II." He then replied, "Look at your lens."

The heat in the club is very great and the evening had a cold nip in the air, and it was quite a long time before my lens warmed up; I usually get warned by my range-finder lens, but that evening I was not using my range-finder. I was in my special spot, which I know to be 20 ft. away from the ring.

At Lane's London Club.

Ice Hockey.

Ice Hockey at Wembley.

The season is now some weeks old and rinks are to be found all over the country. Have a try at securing a picture next time you have a chance, but do not forget that it is the fastest game in the world.

I am not going to give you the stops and exposures, as no two rinks have the same strength of light, and it would spoil for you more than half the fun of mastering a difficult subject; but I will place the London rinks in order as to how I have found their lighting.

(1) Streatham, (2) Richmond, (3) Wembley and Harringay, (4) Earl's Court.

The light at Streatham has been very carefully tested at ice level, and I am assured that it is 47 candle-power per square foot, and that this is 12 candle-power better than any other rink.

White Borders *to Enlargements*

HOW TO GET EVEN MARGINS.

THE masking frame is widely used as a combined paper-holder and mask when making prints with the aid of a "miniature" vertical enlarger. Some users find difficulty in making the mental calculations necessary to set the arms for even masking, especially when frequent changes from horizontal to vertical pictures occur in dealing with a series of negatives.

It is a good plan to have a fixed margin as a basis, varying this, if required, from print to print, but returning each time to the original setting before making the next print.

An Even Margin.

Suppose half-plate paper ($6\frac{1}{2} \times 4\frac{3}{4}$ in.) is in use, one may decide on a $\frac{1}{4}$-in. margin as a standard. The stops are set back $\frac{1}{4}$ in., and the frame is set to $6 \times 4\frac{1}{4}$ in. Reading from the stop outwards, one thus gets $\frac{1}{4}$-in. margin, $4\frac{1}{4}$ in. of picture, and the remaining $\frac{1}{4}$ in. required to make up the total of $4\frac{3}{4}$ in. will again be margin.

Thus the frame is set to the size of the paper *less* double the width of the margin. The settings for this should be memorised or marked.

An even white border is less effective than a border which is widest at the bottom of the print. In making a horizontal print this is obtained by sliding upwards the lower masking strip to the desired extent. If the next picture is to be vertical, the frame is reset to its original position to give the uniform $\frac{1}{4}$-in. margin, and then the band at the bottom of the picture is moved up by the required amount. If the bottom of the picture falls at the end of the frame where the stop is placed, first the stop is moved back to the extent necessary to give the wider margin, and then the masking band at the top of the picture is moved in by exactly the same amount. That the band has been moved is obvious; do not forget that the stop also requires resetting to get back to the standard position.

It will be noticed that this simple procedure assumes that a horizontal picture will be made a little narrower than the maximum the paper will accommodate, while a vertical picture becomes more nearly square. If a horizontal picture is too long, or a vertical one too wide, it becomes necessary to move both masking bands and one stop if the picture is to be centred on the paper. In doing this mistakes are easy; it is usually preferred to bring in the masking band at the side of the picture as far as may be necessary to give the required shape, and then to trim off the excess margin on that side.

The handling of the frame can best be learnt by taking some sheets of (non-photographic) paper, cutting them to the size of the enlarging paper to be used, and setting the frame to give whatever combination of margins you care to think of. Put the paper in the frame and run a pencil round the picture opening. On taking the paper out you will see at once whether the "picture" is correctly positioned on the paper.

Centimetre Sizes.

Some frames of Continental origin are marked in centimetres instead of inches. To get a 5-mm. margin the opening must be set to 10 mm. each way less than the printing paper. For this, a knowledge of the dimensions of the paper in centimetres is necessary. Metric equivalents of the commoner English sizes are given in the accompanying table.

$4\frac{1}{4} \times 3\frac{1}{4}$ in.	..	108 × 82 mm.
$5\frac{1}{2} \times 3\frac{1}{2}$,,	..	140 × 89 ,,
5 × 4 ,,	..	127 × 101 ,,
$6\frac{1}{2} \times 4\frac{3}{4}$,,	..	165 × 120 ,,
7 × 5 ,,	..	178 × 127 ,,
8 × 6 ,,	..	203 × 152 ,,
$8\frac{1}{2} \times 6\frac{1}{2}$,,	..	216 × 165 ,,
10 × 8 ,,	..	254 × 203 ,,
12 × 10 ,,	..	304 × 254 ,,

A. L. M. S.

Fine-Grain Developers.

FOUR OFFICIAL FORMULÆ.

THE following four developers are recommended by different makers of films and plates. All belong to the borax M.Q. type of developer of high sulphite concentration. We have not experimented with them all, but they are given here as a matter of interest, and as material for experiment for those whose tastes incline in that direction.

Gevaert Fine-Grain Developer:

Metol	12 grs.	1.4 grm.
Sodium sulphite (anhydrous)	620 grs.	72 grm.
Hydroquinone	16 grs.	1.8 grm.
Resorcine	12 grs.	1.4 grm.
Borax	12 grs.	1.4 grm.
Water (distilled)	20 oz.	1,000 c.c.

Time of development, about 8 minutes at 65°.

Dupont Fine-Grain Developer:

Metol	22 grs.	2.5 grm.
Sodium sulphite (anhydrous)	1½ oz.	75 grm.
Hydroquinone	26 grs.	3 grm.
Borax	44 grs.	5 grm.
Water to make	20 oz.	1,000 c.c.

Time of development, 6 to 8 minutes at 65°.

Agfa Borax Developer:

Metol	18 grs.	2 grm.
Sodium sulphite	2 oz.	100 grm.
Hydroquinone	44 grs.	5 grm.
Borax	18 grs.	2 grm.
Water	20 oz.	1,000 c.c.

Time of development, about 15 minutes at 65°.

Ilford Fine-Grain Developer I.D.11:

Metol	20 grs.	2 grm.
Sodium sulphite (anhydrous)	2 oz.	100 grm.
Hydroquinone	50 grs.	5 grm.
Borax	20 grs.	2 grm.
Water to make	20 oz.	1,000 c.c.

Time of development, 12 minutes at 65° for super-speed panchromatic films.

All these are made up by dissolving the metol in a portion of the water at 120° F., and then dissolving about a quarter of the sulphite, together with the hydroquinone (and resorcine, if used) in a little more hot water. This is then added to the metol solution. Finally the rest of the sulphite and the borax are dissolved in the remainder of the water at 160° F. and mixed with the solutions already made up.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

CHOOSING A FILTER.

When buying a filter should one purchase the filter made specially by the makers of the camera (a Rolleiflex) or the filter made specially by the makers of the film one intends to use? W. E. L. (Northampton.)

The camera-makers offer you a filter which will give a certain amount of correction when used with any orthochromatic or panchromatic emulsion. It is in a mount which fits your particular camera in the most convenient possible way.

The film-makers offer you a series of filters which give known and specified degrees of correction with their particular sensitive material, the correction in every case being obtained with the absolute minimum of increase in exposure. The mount they offer may or may not fit your lens; almost certainly you will not be able to use your lens-hood in conjunction with it.

Evidently you require the film-maker's filter in the camera-maker's mount; this you can doubtless get fitted up for you if you care to pay for it.

In everyday practice we doubt whether you could tell the difference between a photograph taken through the film-maker's filter and one taken through any other filter that looked, to the eye, about the same depth and tint. Except possibly for very special purposes, we think you will lose nothing by using the camera-maker's filter, so gaining the mechanical convenience of a carefully-designed mount.

BOOKS ON MINIATURE PHOTOGRAPHY.

I have just bought a miniature camera, and find that I am getting on less well with it than I had expected. I feel that this is due to my not yet having acquired the "miniature touch," and think that a careful perusal of one or two books dealing with miniature photography would probably put me right. Where can I get such books?

J. M. S. (Oxford.)

If you apply to Messrs. Sands Hunter & Co., of 37, Bedford Street, Strand, London, W.C.2, for a catalogue of their books on miniature photography we think you are certain to find among them some that will suit your needs.

LENS SHUTTER OR FOCAL-PLANE?

I am intending to buy a miniature camera, and in examining the catalogues and lists of the various models I notice that one group uses a between-lens shutter while another group uses a focal-plane shutter. What are the advantages of the two types?

F. T. (Lincoln.)

There are, of course, advantages on both sides. The between-lens shutter is the cheaper, and generally allows the camera to be rather smaller than would be possible if a focal-plane shutter had to be built into the camera body. Further, it is usually the more silent in action of the two. The focal-plane shutter offers the advantages of a higher maximum speed, which is occasionally useful in photographing fast-moving objects. Much more important is the fact that since the shutter is immediately in front of the film it is possible to remove the lens and replace it by one of different focal length without fogging the film.

Another very important point is that the release of the focal-plane shutter is always on the camera body, allowing a firm grip of the camera to be taken. It is only fair to add that in some few lens-shutter models this point has been appreciated and a release on the camera body has been provided. In most focal-plane models the action of setting the shutter automatically advances the film, which is a convenience.

AN ENLARGER QUERY.

In the advertisement of an enlarger, the purchase of which I am considering, it is stated that "it will enlarge Leica size to 12×10 in." Since 36×24 mm. and 12×10 in. are entirely different shapes, how can this be?

A. B. M. (Luton.)

We should expect an enlarger so described to be capable of enlargement sufficient to bring the smaller dimension of the negative (24 mm.) up to the smaller dimension of the paper. This will be an enlargement of just over 10 diameters, since 24 mm. is a little less than an inch. The whole picture projected will then be 10×15 in., of which you will use as much as the 12×10 paper will contain.

MINIATURE CAMERAS

We are the only firm in Great Britain specialising exclusively in miniature photography. Leicas, Contaxes, Rolleiflexes, Exaktas, Super Ikontas—we have every model, lens and accessory always in stock. Our Miniature Camera Repair Service is unique, and, once again, we are the only people undertaking exclusively the processing of miniature films. Our staff will be glad at any time to give absolutely frank advice about the choice of suitable apparatus or accessories. We claim that, as genuine miniature camera specialists, the service we can offer miniature enthusiasts is unparalleled.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

CONTAXES:

Contax Model II, f/1.5 Sonnar lens. As new £52 10 0

Contax Model I, latest wedge-type range-finder, f/1.5 Sonnar lens. As new.....£39 10 0

Contax Model I, latest wedge-type range-finder, f/2 Sonnar lens. As new £29 10 0

Contax Model I, latest type shutter, f/2.8 Tessar. Practically as new.....£19 10 0

Plate Back for Model I Contax.....£2 10 0

LEICAS:

Leica Model III, black, f/2 Summar lens, ever-ready case. Practically as new.....£29 17 6

Leica Model III, black, f/2 rigid Summar lens, ever-ready case. Practically as new.....£26 17 6

Leica Model I, non-interchangeable f/3.5 Elmar, case. Practically as new.....£8 17 6

Another, as above. In good average condition £7 15 0

Leitz 5-cm. f/2 Summar, non-collapsible. New condition £10 10 0

Leitz 13.5-cm. f/4.5 Elmar, coupled. Excellent condition £11 10 0

Flashlight Attachment for Leica Model II or III £3 7 6

Other Miniature Cameras fitted with coupled range-finders:

Dollina II, coupled range-finder, f/2.8 Tessar. As new £13 17 6

Plaubel Roll-Op, f/2.8 Anticomar, Rapid Compur. As new £15 15 0

Voigtlander Super Bessa, f/4.5 Helomar lens, Compur Rapid. As new.....£12 10 0

Super Ikonta 530, f/3.5 Tessar, normal Compur, case. Practically as new.....£13 0 0

Super Ikonta 530/LCpR, f/3.5 Tessar, Rapid Compur, ever-ready case. As new.....£14 7 6

Super Ikonta 530/16, f/2.8 Tessar. As new..£20 0 0

Super Ikonta 530/2, f/3.8 Tessar, Rapid Compur, ever-ready case. As new.....£17 17 6

Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, case. As new.....£14 7 6

Super Ikonta 530/2, f/4.5 Tessar, normal Compur, case. As new £13 7 6

Super Nettel, f/3.5 Triotar. As new.....£12 17 6

Nettax, f/2.8 Tessar, 2 filters, ever-ready case. Practically unused. Cost £34 10s.....£26 10 0

Cameras taking 16 exposures on V.P. size film:

Nagel Vollenda, f/3.5 Tessar, Compur, filter, Proxar. Excellent condition £8 15 0

Zeiss Baby Ikonta, f/3.5 Novar, Compur. Excellent condition.....£5 15 0

Plaubel Makinette, f/2 Supracomar, Rapid Compur. Excellent condition £15 15 0

Nagel Pupille, f/2 Xenon, Compur. Excellent condition £12 12 0

Cameras taking 16 exposures on V.P. size film—contd.

Nagel Pupille, f/3.5 Leitz Elmar, Compur. Excellent condition £9 9 0

Voigtlander Perkeo, f/3.5 Skopar, Compur. Excellent condition £5 15 0

Foth-Derby, f/3.5 lens, focal-plane shutter. Excellent condition..... £3 12 6

Baldi, f/2.9 Trioplan, Compur. As new.....£5 15 0

Baldi, f/4.5 Vidanar, Vario shutter. As new..£3 3 0

Korelle, f/2.9 lens, Compur shutter.....£3 17 6

Piccochic, f/2.9 Vidanar, Compur shutter....£3 17 6

MINIATURE REFLEXES:

Primarflex, f/3.5 Tessar. As new.....£27 10 0

Exakta Model C, latest lever wind, f/2.8 Tessar, 3 slides and focussing screen. As new.....£24 10 0

Primarflex, f/3.5 Tessar. As new.....£27 10 0

Exakta Model B, latest lever wind, f/3.5 Exaktar lens. As new.....£15 15 0

Exakta Model B, f/1.9 Dallmeyer Super-Six, case. Practically as new.....£25 10 0

Exakta Model A, latest lever wind, f/1.9 Dallmeyer Super-Six. As new.....£21 10 0

Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6

It is with pleasure that we are able to announce that the film that won for Mr. E. Bishop a share in the Leica competition first prize was processed by us. Mr. Bishop, a keen amateur who usually undertakes his own work, decided to have this particular film processed by our special paraphenylene-diamine service, with this gratifying result.

We now receive miniature films for special fine-grain development from all parts of the world. Keen miniature photographers realize that only a genuine specialist service will give them satisfactory negatives capable of producing large, grain-free and flawless enlargements. Write for details of our special services.

Exakta Model A, f/2.9 Xenar. Excellent condition £3 17 6

Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur Rapid, ever-ready case. As new.....£19 17 6

Automatic Rolleiflex 6×6, f/3.8 Tessar, Compur, ever-ready case. Excellent condition.....£15 15 0

Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0

Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new £19 17 6

Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6

Rolleicord Model II, f/3.5 Triotar, case. As new £13 17 6

Noviflex, f/2.9 Trioplan, filter, case. As new £9 17 6

Voigtlander Superb, f/3.5 Heliar, ever-ready case. As new £13 17 6

Voigtlander Superb, f/3.5 Skopar, case. As new £11 17 6

Welta Superfekta, f/2.8 Tessar, 2 filters. As new £18 15 0

MISCELLANEOUS:

Dollina I, f/2.9 Radionar, Compur shutter. As new £6 17 6

Kodak Retina, f/3.5 Xenar, filter, case.....£6 19 6

Kodak Six-20 Duo, f/3.5 lens, Compur shutter, case. As new.....£7 17 6

Kodak Six-20 Duo, f/4.5 lens, Compur shutter. As new.....£6 18 6

Kodak Six-20 Duo, f/4.5 lens, 3-speed shutter. As new £4 0 0

MINIATURE ENLARGERS:

Latest Model 6×6 Filmarex, with new special negative holder and condenser. As new.....£9 10 0

MINIATURE ENLARGERS

A NEW FREE BOOKLET ON THE SUBJECT BY R. G. LEWIS

Customers are continually writing to ask our advice about various types of miniature enlargers. We therefore thought it a good plan to produce a comprehensive booklet in which all the leading miniature enlargers are not only fully described, but are frankly discussed with regard to their suitability for use with various negative sizes and their adaptability for different special purposes. This booklet, which is now ready, we shall be very glad to send free on request.

Half the satisfaction in photography is associated with the production of one's own enlargements, and the choice of a suitable enlarger makes just the difference between working in comfort and working under difficulties. Not only do we keep in stock every enlarger worth having, but we see to it as a matter of professional pride that our customers get the right apparatus for their purpose. The purchase of a miniature enlarger from us is in itself a guarantee of satisfaction.

Other new free literature we shall be very pleased to send:

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLIX.

M. EMILE LAEVAERT.

From information communicated to our Special Representative.

"FOR many years I have been a humble follower of the art of negative and print making. About two years ago I made myself an enlarger, which has served me ever since, and it is from that time that I became seriously interested in photography. I have never regretted it, for no other hobby or pastime has given me so much pleasure.

"My favourite subjects are landscapes and marine pictures, in which I seek, above all, for beautiful skies and subtle effects of atmosphere. I also like to photograph flowers, but only in their natural surroundings, or with the sky as background. Cut flowers interest me much less.

"At the present moment I have three cameras. One is for plates $3\frac{1}{2} \times 2\frac{1}{2}$ in., with double extension, and a Zeiss Triotar of 5-in. focal length, rising and cross front both ways. It has two film-pack adapters, one always loaded with orthochromatic films, and the other with panchromatic. The other cameras are a Kodak Six-20, and a little Korelle taking sixteen pictures on V.P. I use Kodak negative material almost exclusively —Verichrome, Panatomic and Super Sensitive, according to the subject to be photographed and the effect desired. The Verichrome film I reserve for misty and foggy subjects and *contre-jour* effects. I never use plates.

"I develop my films, according to subject, with either Kodak D76 or D72, using dishes and working in total darkness, and giving twelve or five minutes respectively at 65 degrees Fahr. As far as possible I endeavour to obtain a negative of normal density with plenty of detail in the shadows.

"I never make contact prints. After development the negatives which seem to me of little interest are immediately destroyed; from the others I make enlargements about 7×5 or 9×7 in. The best of these are reserved for a still greater degree of enlargement.

"My prints for competitions or exhibitions are always made on Kodak Royal or Old Master bromide paper, white or tinted, normal or soft, according to subject and effect. In some cases I use Agfa Brovira paper. I always develop my enlargements in a normal M.Q. solution.

"I endeavour to make my prints as 'straight' as possible, the necessary modifications being obtained entirely by control when enlarging. When the prints are thoroughly dry they are mounted, and slight defects corrected with pencil and retouching knife.

"A pleasing composition of the picture, and as truthful a reproduction as possible of the conditions prevailing at the moment of exposure, are to me of vital importance. This is a golden rule. I would add that, in my opinion, two qualities should be the basis of work of all real amateur photography—patience and cleanliness. Patience is necessary in seeking and selecting the subject, in arranging it in the picture-space, and in awaiting the best moment for making the exposure; patience also, and absolute cleanliness in all the subsequent operations, from the very beginning up to the time when the mounted print is submitted to the judges.

"In conclusion I would say that the careful study of so interesting a paper as *The Amateur Photographer* is one of the surest aids to progress. To it I owe the greater part of such success as I have achieved in various exhibitions and competitions, and of the pleasure I have derived from this inexhaustible pastime."

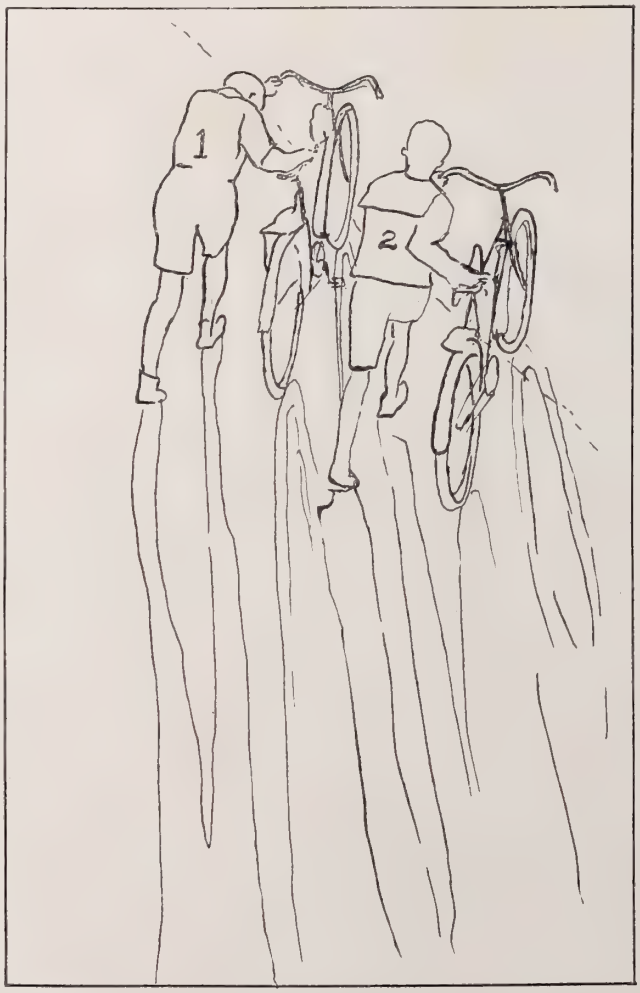
PASTORAL. *Emile Laevaert.*

(*A further example of Mr. Laevaert's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"EVENING SHADOWS," *by H. Walther.*



THESE transitory effects of sunshine and shadow, which only rarely occur and which only exist for the passing second, are most difficult to secure and are seldom caught. Moreover, when they *are* seen, it is a chance in a thousand that a camera is available, and, if it does happen to be at hand, the instrument is not ready for action. By the time it is, the picture has usually passed for ever, unless, perchance, the photographer is equipped with one of the miniature cameras of to-day.

For all practical purposes, they are always ready for immediate action. They can be carried in the pocket or slung over the shoulder, where they are scarcely felt. When the subject comes along, it is the work of an instant to set the shutter if it is not already wound; to pull out the lens and set the diaphragm; to focus the subject through the range-finder and release the shutter; whereupon the subject is recorded once and for all. In fact, the whole series of operations can be carried out in less time than it takes to read this description.

In this particular instance we are advised that the camera was a "Contax," and that the exposure was 1/100th of a second at f/3.5. This is a comparatively large aperture, but, even so, there is no evidence of any lack of defining power anywhere in the print, which affords ample testimony in respect of its depth of focus, as well as indicating the accuracy with which the distance was calculated. The lighting, in view of the time of day, could not have been very powerful, but there is not the slightest hint of under-exposure, and the shortness of the exposure has effectively prevented any sign of subject movement from making an appearance. There is no indication of any technical deficiency. Rather the reverse; but the chief thing to note is that a fine subject has been secured, where, in the normal way, it would have passed before it could have been obtained.

In but a fraction of a second later the figures would have entered the region of shadow towards the top and the motive would have disappeared entirely. It may be that other types of camera could secure an equal result, assuming that the presence of the figures had been anticipated and the apparatus had been previously prepared and set in readiness, but, even so, the facilities would scarcely be equal, for, with a larger instrument, it would not be feasible for either the same aperture or the same shutter speed to be employed.

In connection with the arrangement, a like degree of efficiency is displayed. The subject might be described as a "close up," and is one with which the camera is supremely capable of dealing. It is a foreground study, and ample justification for its length is provided by the long shadows cast by the evening sunshine.

The interest, of course, centres in the two figures, of which (1) assumes priority because of his superior scale and stronger placing. The fact that he is somewhat higher in the picture space than (2) heightens the impression, as also does the greater contrast of tone within his outline, while the more effective way in which he is isolated from the setting further enforces his pre-eminence. No. 2 is of appreciably smaller size; he is not so well distinguished from the background; and, while he has enough of a pull to maintain his place in the scheme, he is not so insistent that the dominance of the other is impaired. There is a sufficient connection between the two figures to maintain good grouping, and, altogether, their placing seems excellently contrived.

The feeling of evening light, which, after the group, forms a secondary motive, arises from the brilliance of the illumination outlining the figures and from the length of the cast shadows. It gets across most effectively and lends an added interest that greatly appreciates the charm of the impression.

The criss-cross of line, too, creates an idea of pattern which enhances the sense of order in the composition. It also helps in conveying an impression of originality and freshness of outlook.

A further feature is the fine sense of action that the pose of the figures suggests, and, altogether, the picture has points which command our admiration and create the wish to emulate its manifold attractions.

"MENTOR."

EVENING SHADOWS. By H. Walther.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IN Nos. 1 and 2 of the prints reproduced on the opposite page—"Zell-em-See," by J. H. Weston, and "Calf Bay," by J. Underwood—there are two somewhat similar subjects, more or less similarly treated, except for the fact that No. 1 includes a spread of foliage along the top and No. 2 is free from any such intrusion.

Inadvertent Inclusions.

Looking at the two prints as they stand, most people will—perhaps without knowing exactly why—find themselves preferring No. 2. But if the two subjects be considered, it will be found that in the case of No. 1 the overhanging branch of foliage creates an impression of an inadvertent inclusion, or, if not that, a suggestion that had the effect been foreseen it would have been avoided—an impression that does not exist in the second.

The sense of inadvertence seems to be confirmed by the sloping inclination of the line where water meets mountain in the distance. A line of this character would be strictly level and should be so represented in the print. It is obviously wrong as it is, and no one with any pretensions to experience would have permitted such a fault to be seen in a picture which is supposed to be finished. Were it not for this, it might have been possible to credit the author with the intention—even if mistaken—of including the foliage in question; but the two faults occurring at the same time in the same print not only indicate the hand of the novice, but lead to the conclusion that they were both regrettable oversights.

Moreover, had the arrangement of the subject been given proper consideration, it is highly improbable that so little foreground would have been included at the base, and the wisdom of arranging for more of the hillside on the right to be brought into view would have been apparent. There is now, unfortunately, nothing that can be done towards correcting these faults of arrangement, but the levels can, of course, be adjusted by trimming the print.

Competent Workmanship.

In comparison, No. 2 appears to achieve a much higher standard of competence. The level lines are truly horizontal; there is nothing that seems to convey the impression of inadvertency; and the inclusion of the fence in the foreground seems to indicate a creditable attempt to provide a needed relief to what would otherwise be an empty waste of waters.

Nevertheless, it might have been improved if it had been found possible to have compressed the amount of space allotted to the foreground, as might be done by lowering the level of the viewpoint and increasing the proportion given to the sky. The gradation in the latter might be better brought out, and, judging from what is visible, a little local extra printing is all that would be necessary.

No. 3, "By Quiet Waters," by A. Rhodes, also shows a like competence in workmanship, but the rendering is somewhat impaired by the blankness of the sky. The same expedient—local overprinting—would afford some improvement, but if it had been possible to have found a higher and downward-looking viewpoint so that the sky could have been excluded altogether, it would have provided a better arrangement and a better setting for the figure.

Printing Depth.

At present, the brightness of the sky creates an interest which its function neither warrants nor justifies, and which naturally diminishes that which should attach to the figure.

If its tone be lowered as suggested, or if it could have been eliminated, the position would be corrected and the figure be able to maintain the attraction it should. Looking at the print as it now is, the figure is barely distinguishable, but cover up the sky and it immediately leaps into prominence.

It really should exhibit a similar prominence without adjustment or masking, and, if it did, not only would the picture seem to attain a better composition, but it would also achieve a much higher artistic level.

No. 4, "A Fair Wind," by L. M. Lee, is a more difficult type of subject, for choice of viewpoint is by no means under like control, and there is little possibility, except by careful selection of the precise moment for making the exposure, of securing a good form of arrangement. The fact that the near boat, which is the centre of interest, is mixed up with one or two in the rear may, therefore, be excused, and the hope expressed that fortune will be more kind on another occasion. There is less excuse, however, for the sombre tone in which the print is rendered, for it simply seems to be attributable to a miscalculation of the depth to which printing should be carried.

The Quality of Light.

The consequence is that all the sense of luminosity which the picture should possess, and which would be a feature of the actual scene, is absolutely lost, and with it goes most of the appeal.

An appreciably lighter print would convey a much better impression, a fact which can easily be proved by the expenditure of a little time in experiment. No. 5, "Dreamy Devon," by N. S. Parkes, is inclined to err in the opposite direction, and, instead of creating an idea of the quality of light, is more suggestive of blankness or lack of gradation, particularly in the upper region.

If printing were carried a stage or so farther, the rendering of the subject would be improved, although it is also probable that, in the darker edition, the unevenness which is noticeable now towards the left-hand side would be much more marked. There are many possible causes for markings of this description, ranging from lack of covering power in the lens; reflections from the interior of the camera; uneven development or fixation; to uneven illumination during printing. But it is likely that careful enquiry into procedure at each and every stage would bring it to light.

In the case of No. 6, "The Jetty," by F. A. Larner, the print is of a much higher level of craftsmanship. In fact, its tones, with the exception of the sky, are very well rendered indeed. The sky is rather over-bright for the rest, but it could have been made to assume a more decided tone by the use of an appropriate light filter, or, now that the negative is made, the expedient of local extra printing might be tried.

In choice of material it scarcely reaches the same standard, for its interest is purely topographical, and, that being so, it can only be regarded as a record.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SUITING THE PAPER TO THE NEGATIVE.

IT is really impossible to deal with this question in a brief manner, and I can only give a few simple general ideas about it; but every beginner who makes his own negatives and prints must have some knowledge of this important subject. That it is often ignored is shown by the frequency with which "Mentor" advises beginners to use a different grade of paper for a particular negative to improve the result.

More than once it has been stated that the ideal negative is one that will give a satisfactory print with any and every printing process. Then all I can say is that the ideal negative is purely imaginary, and does not and cannot possibly exist. Often I am asked to say whether a negative has been developed far enough; whether the contrast—the range of densities—is right, too little or too great. The only answer is that it depends on the purpose for which the negative is required.

As it is impossible to give much idea of the character of a negative from a reproduction on paper, I think it will be better to approach the matter from the printing end. After all, the most usual purpose of a negative is to produce a print.

Fig. 1.

Leaving out a few minor qualifications and exceptions we may take it that the "scale" or "range" of all the usual printing papers runs from the blank surface of the paper itself to the darkest tone it will give, and that between these extremes there lie something like a hundred distinguishable intermediate tones. On a gaslight paper, for example, the extremes of the scale will be white and black.

It does not follow that we want the whole scale, or anything like it. In a copy of a pen drawing on white paper we require only the extremes, white and black, with nothing between. We want one set of tones for a high-key print, another set for a low-key subject, and often a very full range for all sorts of subjects.

In a negative we want all the different densities that correspond inversely to all the relative brightnesses found in the subject; and the print from the negative must reproduce all these differences correctly if our rendering of the subject is to be a truthful one. No paper can show a greater number of differences in tone than there are differences in opacity in the negative; but it may quite easily show a smaller number.

Fig. 2.

The point that is so often overlooked is this. Although the papers used may have approximately the same possible range of tones they have a very different "exposure scale." Let us see what this means.

If we take, say, a piece of gaslight paper, we can find by experiment how much exposure to a certain light, at a given distance, will give, with full development, the faintest tone that can be distinguished from the white base. We can also find the exposure required to produce the deepest black the paper will give. Between these two lies a whole series of exposures that will give all the intermediate tones.

The difference between the times of exposure for the lightest grey and the deepest black is the "exposure scale" for that particular paper. Thus, if it took one second to get the grey and fifteen seconds to get the black the exposure scale for that paper is 1 to 15. Very roughly the scales of certain papers are something like this: vigorous gaslight, 1 to 10; normal gaslight, 1 to 20; vigorous bromide, 1 to 30; normal bromide, 1 to 50; fast bromide (and many P.O. papers), 1 to 60; carbon, 1 to 80.

But when we expose a print we give it the same exposure all over. The differences in light action are brought about by the differences in transparency and opacity of the negative. It is evident, therefore, that the range of opacities in the negative must be such as to suit the exposure scale of the paper.

Fig. 1 is from a print on normal bromide paper, the four strips having exposure in the ratio of 1, 2, 3, 4.

Fig. 3.

The short exposure for strip 1 has given nothing darker than the grey of the figures. Strips 3 and 4 show the darkest tones required, but only at the expense of making all the light tones too dark. The densest parts of the negative were not sufficiently opaque to withstand the long exposure necessary to bring out the blacks.

Had a vigorous paper, with a shorter exposure scale, been used, the blacks would have come up in a shorter time, and the lighter tones would not have been overdone.

Fig. 2 is a print on the same paper, with longer exposures, but still in the ratios of 1, 2, 3, 4. Strips 3 and 4 show good blacks, while the lighter tones are retained, because in this case they were represented in the negative by opacities capable of stopping the proper amount of light.

Fig. 3 is on the same paper, but received the same exposure all over. This has brought out the darker tones, but some parts of the negative are too opaque, and required a longer exposure. But this would have overdone the black and dark greys. A paper of a "softer" grade, with a longer exposure scale, would have put matters right.

This is not all the story, but it must suffice for the present. W. L. F. W.

Exhibitions and Competitions

CURRENT AND FUTURE.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in the issue of October 28.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

Lincoln Camera Club.—Open, October 15–November 12. (Miss E. Redfern, 146, Burton Road, Lincoln.)

Third Canadian International Salon of Photographic Art.—Open, October 23–November 15. (Exhibition Secretary, Canadian International Salon of Photographic Art, National Gallery of Canada, Ottawa, Canada.)

Eighth International Photographic Salon of Japan.—Open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi, Shimbun, Tokyo, Japan.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

G.E.C. (Coventry) Third Annual Exhibition. Open classes for members of Midland Federation Clubs.—Open, November 9–14. (P. H. Crosby, Hon. Sec., G.E.C. Photographic Society, General Electric Co., Ltd., Coventry.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Borough of Ealing Public Libraries Photographic Exhibition and Competition.—December 9–10. Open to all residents in the Borough. (M. L. Hodges, Librarian, Hanwell Public Library, London, W.7.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Entries, November 15; open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Entries, November 18; open, November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Entries, December 15; open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

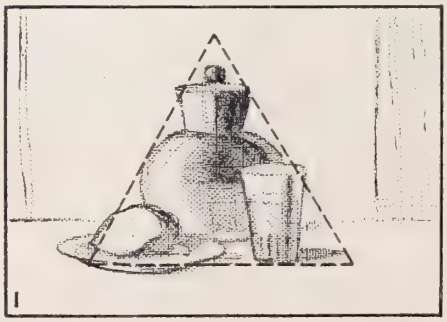
Western Eighth Annual Salon of International Photography.—Entries, February 1; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9; exhibits, March 1; open, March 3–6. (Walter Selfe, 24, Pembury Road, Clapton, London, E.5.)

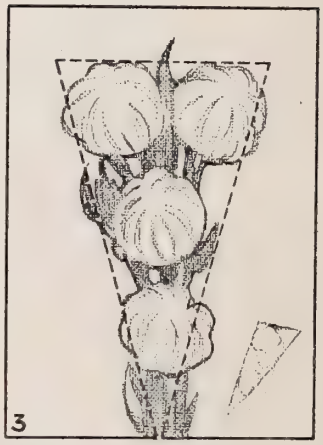
L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly Co., Euston Station, London, N.W.1.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1, open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)



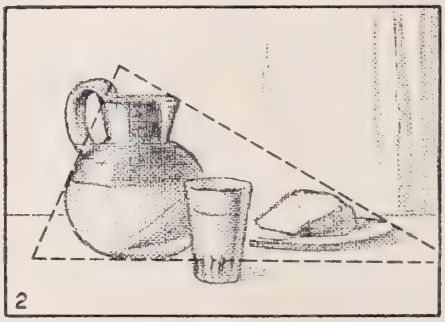
Picture Points

No. 25 (New Series) *by RICARDO*



Pyramid Construction.

ANOTHER constructional device that is often used as a "frame" for pictorial arrangement, the triangle or pyramid, lends itself in a variety of ways and is very useful where it is desired to give the suggestion of stability.



Sketch No. 1 gives a clear explanation of how this device is used, but suffers from using a triangle of equal sides and following the shape too closely. As a result, the entire arrangement looks mechanical and monotonous, but there is no doubting the sturdiness of the group. Because of this, it is an excellent device to use for objects that are rather delicate in their construction —flowers, etc.

1

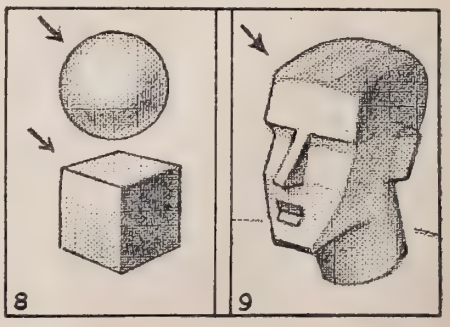
Sketch No. 2 shows how the first sketch can be improved while still using the triangle shape as a contour. Because the sides and angles are all different the triangle has a pleasing variety in its shape and this is reflected in the group itself. If the glass and the jug handle were not breaking through the lines then there would have been the danger of making the triangular shape too obvious. So far, the pyramids have been shown vertical, but there is no reason why they should not be in any other position providing they do not look as though they are balancing precariously on one point like that in Sketch No. 3. If the group is considered satisfactory then it is necessary to strengthen the base as suggested in No. 4. It would help further if the top bloom were made the principal point of interest by lighting, colour, etc., and so attract the eye away from the weakest point.

3

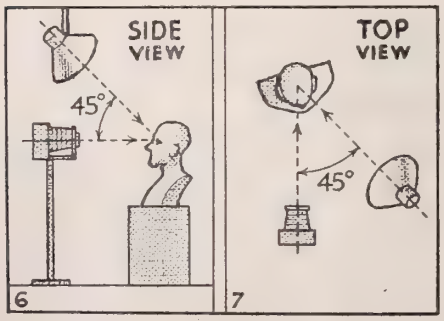
4

2

5



No. 5 shows another example of stabilising the inverted triangle suggested by the faces, by making full use of the weight of the shoulders of the figures.



Lighting Angles, 45° Front.

FOLLOWING up the point on modelling discussed in last week's series, we should examine the angles of the lighting used, suitable for expressing good modelling or "solidity."

Without doubt, the most suitable angle and direction for nearly all objects is what is known as 45° front lighting. This is best understood by referring to the diagrams in Figs. 6 and 7. The 45° angle applies to both the side and top views, but it is immaterial whether it is placed on the right or left of the subject since this depends on the position of the subject itself.

This angle of lighting approximates that of normal daylight, and for this reason shows objects in the same light and shade in which we normally see them, a point to bear in mind for good portraiture.

If we were to place a sphere and a cube in this angle of lighting we should get something similar to the modelling suggested in Fig. 8. It is undoubtedly orthodox lighting, and many will argue that it is therefore commonplace. This is true, but before the uninitiated attempt the clever lighting effects that experienced workers use, they are well advised to master the 45° front lighting first. They can then proceed to practical experiments with other directions of lighting and arrangement.

Putting the principle into practice, let us imagine a head that is simplified in its various planes, and we shall get a shape similar to Fig. 9. Although it is a complex arrangement of various spherical and flat surfaces, we still treat it as a combination of a sphere and a cube, and for the best interpretation of solidity the same 45° front lighting is ideal.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The first informal meeting of the newly-formed Miniature Camera Group of the Royal Photographic Society will be held at 35, Russell Square, on November 12th, at 7 p.m., when Mr. G. Ahrens will speak on "Some Emulsions for Miniature Work." Those interested in miniature camera work will be welcome at this meeting, and tickets may be obtained on application to the Secretary, Mr. H. H. Blacklock, Royal Photographic Society, 35, Russell Square, W.C.1.

The weekly award of 21s. for the prize-winning print in the Wallace Heaton Weekly Competition has been awarded to Mr. F. W. Baynes, Pembridge Gardens Hotel, Notting Hill Gate, W.2. Details and full particulars regarding this competition appear every week in our advertisement pages.

The Leica Exhibition of enlargements from negatives by Dr. Paul Wolff is being held in Sheffield at 68, Fargate until Saturday, the 14th November. The pictures will be on view daily from 10 a.m. until 9 p.m., Sundays excluded.

In the Directory of British Amateur Cinematographic Societies, published in the issue of "The A.P." dated October 28th, an error occurred in the announcement regarding the Brondesbury Ciné Society. Club nights are Wednesdays and Fridays, and the annual subscription has been reduced from £2 2s. to 10s. 6d. for men and 5s. for ladies.

At the Wimbledon Ciné Club entries for the "Brunel Cup" and "Harris Cup," which are awarded for the best film of the year and the best processed film respectively, will be judged on Friday, 13th inst. Other activities of the club include special meetings for the associate members, which is a new type of membership just introduced, also the 6th Annual Ciné Dance, which will be held at the Wimbledon Baths Hall on Saturday, 12th December. Copies of the 1936–37 Syllabus may be obtained from the Hon. Secretary, Mr. C. W. Watkins, 79, Mostyn Rd., Merton Park, S.W.19.

In the October 28th issue of "The A.P.," in referring to the Ilford Photo-Electric Exposure Meter, the price of an ever-ready case was given as 5s. We have now been informed by Messrs. Ilford Ltd. that the price of £3 3s. includes a neat leather case.

A special sale of photographic apparatus of all kinds has been announced by Dollonds, of 35, Ludgate Hill, E.C.4, prior to their removal to larger premises at 20, Ludgate Hill. The attention of our readers who are in search of bargains is directed to the goods which are offered this week at greatly reduced prices.

The prize competition organised by Messrs. E. Leitz for photographs taken with the Leica brought in a very large entry of excellent pictures that amply demonstrated the capabilities of this popular miniature camera. The Editor of *The Amateur Photographer* was the judge, and the prize-winners are as follows: First Prize (£25 divided), Edward Bishop and J. B. Rustomjee. Second (£10), Edward Certon. Third (£5), E. Ramsden Hall. Fourth (5 prizes of £2 each), H. How, F. G. Johnson, G. C. Kingham, Gordon Lang and I. Morris. Fifth (10 prizes of £1 each), C. F. Crompton, Leif Dybwad, Capt. O. H. Frost, C. Hopwood, W. Leach, E. Mills, J. Scott Pitcher, H. Steele, S. Tomiyama and J. F. de Villiers.

The "Wellcome" Photographic Diary for 1937 is now available. As in previous years, this book contains all necessary detail for the use of "Tabloid" photographic chemicals, which comprise developers, toners, intensifiers, reducers, and stains. Covering all these the book is no less than a comprehensive handbook to photographic processes. In addition, the well-known exposure calculator is incorporated, together with instructions for its use. Full tables of development times, film, plate, and paper speeds, and all the necessary data are given. Some forty pages are allotted for records of exposure, and there is also a diary arranged with one week to a page. The "Wellcome" Diary can be obtained from any photographic dealer at 1s. 6d. per copy.

An illustrated Lantern Lecture, under the auspices of the Camping Club, entitled, "Seeing Britain with Camera and Caravan," by Bertram Hutchings, will be given at the London Central Y.M.C.A., Tottenham Court Road, London, W.1, on Thursday, November 19th, at 7.30 p.m. Admission to the lecture is free and any readers of "The A.P." will be welcomed.

At Bath an exhibition of Home Movies and Home Talkies will be held at the Forum Cinema (which has a car park adjoining), from November 11th to 14th inclusive, between 3 p.m. and 10 p.m. each day. Admission is free. All the latest sound and silent sub-standard apparatus will be shown and demonstrated. Two entertaining lectures will be given, admission to which is by ticket only, obtainable free on application to Mr. Cyril Howe, Abbey Churchyard, Bath, under whose auspices the exhibition will be held.

In our September Competition the second prize in the Intermediate Section was awarded to Mr. G. Warren Parrett for a print which was actually entered for the Advanced Workers' Section. We have now awarded the second prize to Mr. C. Banbury, Maiden, Hertford, and a Certificate to Mr. C. G. Jagannathadas, 459, Mint Street, Park Town, Madras, India.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

49. CONCENTRATED DEVELOPERS

THE following formulæ will produce developers that can be stored in a highly concentrated form and need only the addition of water for use. They produce negatives stainless in character and bromide prints with good black-and-white tones.

PARAMIDOPHENOL.

Paramidophenol	1 oz.	(100 grm.)
Potassium metabisulphite ..	3 oz.	(300 grm.)
Warm water	10 oz.	(1,000 c.c.)

After the above ingredients are dissolved add pure caustic potash or soda in saturated solution, a little at a time, until the precipitate first formed is just dissolved and the solution becomes clear. Do not add more of the caustic potash or soda than is required just to clear the solution.

For use take one part concentrated solution and dilute with from 10 to 40 parts water. A normal developer for negatives is one part in twenty, or one in thirty for bromide prints, with a drop or two of 10 per cent of bromide of potassium.

METOL-HYDROQUINONE.

Metol	..	90 grs. (14 grm.)
Hydroquinone ..	..	350 grs. (54 grm.)
Warm water	..	15 oz. (1,000 c.c.)

When dissolved, add 2½ oz. (180 grm.) of sodium sulphite (anhydrous). Stir for two minutes. This will produce a greyish white precipitate, then add pure caustic soda (220 grs., or 34 grm.), stir until all the soda is dissolved, the white precipitate will then disappear; filter and store for use.

For prints and films one part of the M.Q. concentrated developer is mixed with 15 parts of water. For bromide paper the same strength can be used, with the addition of two or three drops per oz. of 10 per cent bromide of potassium solution.

With these developers containing strong caustic alkali a hardening bath should be used for films, plates and papers, and the temperature should not be above 70°Fahr. or there may be a tendency for the gelatine to soften.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

TROUBLE WITH SPOOLS.

SIR,—I do not use roll film as a rule, but took an ordinary $3\frac{1}{4} \times 2\frac{1}{4}$ roll-film camera with me on my holiday as usual. Before I left home I put a colour film in this instrument and used it without any trouble.

I bought a Kodak Verichrome film in North Wales but found that I could not get the spool on to the pins in the camera. Thanks to a damaged thumb and a dented knife blade, I managed to open out the holes in the spool a little, and then got it in place, working it all through correctly.

I then bought a Selo film, but to my surprise found that the spool was exactly the same size and I had to repeat the enlarging process—minus further damage to the thumb. But here I was stranded, as no persuasion would get the empty spool on to the winding-key, and being in "Wild Wales" I had no tools. A friendly dealer gave me a wooden hafted spool, which I put in the camera and thus I was able to use the second spool; but this was finis. On my return I will see what I can do to reduce the size of the pins and winding-key in my camera, and also in an adapter which I have, but it has certainly been something of a nuisance, to say the least, to be caught out in this way. I write to warn other people whose cameras may not be the very latest. The films were quite fresh, "to be developed before August, 1938."—Yours, etc.,

"THE NOMAD."

D. & P. WORK.

SIR,—I recently sent a roll of $2\frac{1}{4} \times 3\frac{1}{4}$ Panatomic film direct to Messrs. Kodak, Ltd., with instructions to develop same in fine-grain developer and make a 20×16 enlargement from the best negative on a roll of suitable paper; I have recently received my films back again and also the enlargement, and must congratulate the firm on an excellent piece of work. There is not a grain showing in the enlargement (from a Rolleiflex picture $2\frac{1}{4} \times 2\frac{1}{4}$), and each negative is excellent in its class; the work seemed extremely cheap, the charges being 6d. for the development and 6s. for the enlargement. The charge for developing is the same as that of my dealer; but this letter is actually to criticise the charges advertised by one or two other firms for fine-grain developing. These are in the region of 3s. 6d. for a complete roll of eight or twelve negatives, and although they announce that individual attention is given to each roll film, I cannot conceive that they would go to all this trouble, use fresh developer each time a roll was completed, and thus justify the charge of 3s. 6d. to 4s. 6d. for 36 negatives on a roll. Further, if they could improve on the developing of the film referred to above, I imagine they must be something very extraordinary.—Yours, etc., C. PHILIP PRESTON.

TWELVE-EXPOSURE FILMS.

SIR,—My present camera is a miniature one for 35-mm. films, using 36-exposure films.

When I first intended obtaining it, 12-exposure films were obtainable, but I now understand that they can no longer be bought.

These I should prefer, even at a slightly higher cost, except for the summer holiday period.

I do not develop my own films, and understand that my dealer would charge 1s. for developing any length up to 36 exposures. I would suggest that 9d. should be sufficient for developing a 12-exposure film, if the films were obtainable. I fully agree with what Mr. R. J. Hoblyn says about the 12-exposure film in a recent issue.

I, too, think that the 12-exposure film at a shilling would be more useful than the 36-exposure film to the majority of amateurs who possess miniature cameras.—Yours, etc.,

BM/NNHR.

QUICK DEVELOPMENT WORK.

SIR,—"'e swope down to the ground and then I see'd 'im drop this." Further elucidation discloses that the groundsman at Denham Aerodrome is speaking on the telephone; that an exposed 16-mm. film has arrived wrapped in a parcel of rags with a long streamer attached and that this film has just made a happy landing, together with a message requesting Messrs. P. F. M. Limited to process the film and return immediately.

As we write this, one of our directors is giving instructions to Denham for his engine to be warmed up in order that he may return the completed film to the sender.

It will be appreciated that by this method, if required, films may be taken in the morning at places as far away as Ostend and shown the same evening.

We would ask you to point out to your readers that where films are sold at an inclusive price for processing, collection and delivery by air are *not* included!—Yours, etc.,

P. F. M. LIMITED.

THE "OPTOCHROM" TANK.

SIR,—I should like to corroborate the remarks of Mr. J. C. Jenkin in a recent issue about the "Optochrom" tank. Perhaps I may be allowed briefly to relate my own experiences with it. The operation of the tank is simplicity itself and it is a god-send for panchromatic films. The first film I attempted to develop in it was hopelessly spoilt through rushing at the job, and when I had removed it from the tank, all bent and crinkled up, I decided that it would have been wiser to have read the excellent sheet of instructions which the makers send out with each tank. I accordingly read, marked, learnt and inwardly digested and then acted upon the instructions and warnings and advices in that sheet, and since then I have had nothing but clean, clear, well-developed negatives free from all marks, scratches, etc. The secret is to pull the backing paper out very slowly and very gently. If care is taken over this for the first five minutes, the battle is over and anybody who fails to obtain complete satisfaction from the tank has only himself or herself to blame. The usual disclaimer.—Yours, etc., H. W. ARMSTRONG.

A STOLEN CAMERA.

SIR,—As a regular reader of "The A.P.," I notice that you insert from time to time notices of cameras lost or stolen.

I wonder if you would be good enough to publish in your columns the notice of the following camera, which a well-spoken gentleman recently took away with him, giving in exchange a cheque which proved to have been from a stolen cheque-book. Incidentally, the camera was advertised in "The A.P.," so perhaps my experience may prove to be of value to the, I hope, few readers of "The A.P." who may be tempted to accept cheques without waiting to have them cashed.

The camera was a Rolleiflex No. 258609, lenses Heidoscop No. 1397524 and Tessar f/3.5 No. 250571, and was stolen on the 21st October by a fair-haired man of medium height with an educated accent, and well dressed.

Incidentally, I am prepared to pay a reward of £2 for the recovery of the camera.—Yours, etc.,

A. G. D. MADGAVKAR.
(42, Denning Road, London, N.W.3.)

MINIATURE ENLARGERS.

SIR,—Now that the low-priced semi-miniature camera has become so popular, why is it that manufacturers are so bashful in coming forward with an enlarger to match?

It is, I believe, only recently that an enlarger has been produced suitable for the half $3\frac{1}{2} \times 2\frac{1}{2}$ negative, the price being between seven and eight pounds.

What is now wanted is a simple and cheap instrument with a 4-in. condenser—or even $3\frac{1}{2}$-in.—capable of turning out a passable enlargement from quarter-plate upwards from a negative exposed in a camera which may have cost no more than three or four pounds.

By purchasing the essential parts, the handy-man can knock up an affair which does do the work for less than a couple of pounds, and it does seem that a manufacturer ought to find it possible to produce something to sell at round about four pounds.

No refinements are necessary, and for the sake of cheapness the instrument could be of the horizontal type.

Good-quality lenses with automatic focussing and other virtues can come later when the beginner has graduated to a fifty-guinea camera.

Now then, manufacturers!—Yours, etc.,

GUY LANKESTER.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Editing and Splicing

By T. F. LANGLANDS.

GENERAL technical excellence does not satisfy for long, and good material must be skilfully arranged in order to make the effect thoroughly pleasing. To clean up and edit, the first action must be the removal of every foot, every frame, that is not perfect in the photographic sense.

Next, arrange it all roughly into sequence and run through it, noting what appears too long or too short, and what gaps there are in the story; finally, when these are rectified then is generally the time to have titles made and start all over again to complete the final edition.

It sounds long, weary, uninteresting labour; actually it can be the most absorbing part of the whole game. The snag to so many is the splicing operation; some struggle for ten minutes over one splice which immediately falls apart directly they go on to the next. A splicer that cuts both ends cleanly is essential; anyone should be able to do two good splices per minute, and four a minute if the job is planned carefully.

Always work with the film travelling in one direction, say starting with the full reel on the right, splicing and rewinding towards the left. To cut out one shot, say the second one, proceed as follows: rewind Shot 1 on the left hand, tear it at the desired spot, immediately clip end of 1 into the left-hand side of the splicer, put the severed leading end of Shot 2 under a paper-weight on the right-hand side of the splicer; run along Shot 2 until Shot 3 is met, tear there, drop end of Shot 2 and forget it, then immediately put leading end of Shot 3 into other side of splicer and make the join. To insert Shot 2 again between Shots 4 and 5, tear film at end of 4, clip it into splicer and drop the leading end of Shot 5; pick up leading end of Shot 2 (under paper-weight), insert in splicer, join, then pick up free ends of Shots 2 and 5 and splice again.

There is no need to stop every minute to argue with oneself whether a shot is upside-down, when once a rule has been made to keep each piece of film laid out in one direction.

The best cement to use is the film-maker's own brand. With Kodachrome it is essential to use cement sparingly, as if it splashes over it will cause colour patches on adjacent frames.

Always use a water-pot, and with a small, stubby brush moisten the gelatine before scraping—it will come off easier.

The way of ensuring a good join is to cut down the cement brush until it will hold only the slightest trace of cement; then wipe quickly over both severed ends and snap down the press at once. Just—wipe, wipe—snap; as quickly as that.

If the film will lift out without strain this can be done after six seconds or so; if the pins of the splicer stand high so that the film does not disengage easily, file them down. With careful planning 250 splices can be done in one afternoon's session without great fatigue.

Professional films are made finally at the hands of the editor; the producer gets all the limelight but it is the editing people who marry the most suitable scenes together and make the jig-saw puzzle intelligible, and if the amateur is directing his attention to more ambitious efforts than a holiday scrap-book, some kind of planning is essential.

Beginners are in the direst need of some window-dressing of this sort, but seem to be the least concerned about it all.

The way to go about it is to view one's proudest and despised efforts alike as "junk," and, absolutely ruthless, without shame, use everything possible to make a picture out of it all.

The man who thought the camera could not lie lived before the days of motion pictures; so let us take all those holiday films that together go to portray our fortnight's hectic activities and try to get them into some sort of connected story. Think that you have to show them to company who have never before met your family, do not know you, don't want to, and are not greatly interested in any of you. How are you going to make them interested?

The rule must be to make the film interesting even to strangers, therefore cut out all intimate personal references in titles, etc., and avoid Christian names; the family knows who's who; outsiders do not; delete "Bessie's morning dip" and "George's dinner," and substitute titles of more general interest.

Next, work in all kinds of scenes that did not happen in that particular story, but which are needed to bolster it up. We need here a few shots showing the start from home. Never mind if we have none, make some next week-end. Pack up the car with all manner of luggage and get the family to rehearse a really hilarious and ludicrous send-off.

Or if you went by train, then go and take some shots of a train of holiday-makers setting off. It doesn't matter

November at the seaside. The above photograph of a popular promenade during an early winter gale suggests a likely ciné film depicting the seasonal changes at familiar places. Such a series of shots should be started without delay.

if the train is not the one you went by. Take it just the same! If you cannot afford time to go to Waterloo, look in at Paddington or Victoria; get some shots of any train, anywhere; the station, porters, luggage, people waving from windows. He will be a wise guy who can spot the deception in one or two five-second shots.

After that there is no harm in going farther and introducing two or three other bits of railway scenery taken at any time convenient to yourself; a shot of a departing train disappearing into the distance (in any direction!), and before leaving the railway do not forget a few feet of an incoming train; no instructions where this is to go need be given.

Another way of adding to one's store of good scenes, and this is a method of comparative transparent honesty, is to make up a length of 30 or 50 feet of useful general shots and get a duplicate positive made. You can then make a short shot of, say, a procession re-appear over and over again, sandwiched between different close-ups, and so balance up what would otherwise be a scrappy one-sided view. Many view shots that have been cut too short in the camera can be saved by having duplicates joined on.

To any beginners who experience difficulties in rapid splicing and editing the writer will gladly advise suggestions for particular films on application through the Editor of *The Amateur Photographer and Cinematographer.*

A Permanent Screen for Home or Clubroom Use

By S. E. L. MOIR.

MOST clubs and many amateurs prefer an out-of-the-ordinary screen to one of a commonplace type. They want their screen surface to be as highly efficient as possible, and they want its proscenium or surround to be at least distinctive. The screen illustrated and described below is intended to satisfy in each of these particulars.

The Screen Surface.

The most important part of any screen is its surface. There is no "best" surface for any screen used under varying conditions; but, if we will admit certain minor compromises, one surface comes very close to deserving that lofty title. I refer to the surface possessed by a new beaded material — which I have found better than anything I have previously seen, and is advocated for use in the screen now under discussion.

This material may be purchased in cut lengths at a flat rate of 2s. 6d. per square foot from Reliance Screens, 19, Broad Street, Wardour Street, London.

The material is made in rolls, 52 in. wide—hence it is suitable for any size of screen up to a width of 5 ft. 10 in.

For best results, the largest sizes only should be used, and it is necessary to follow as closely as possible the mounting instructions given below.

Other Details.

The marginal surround of the screen should be of thin plywood, dull-stained before affixing and mitred at the four corners. Cushion or masked corners have been avoided, since they add to the constructional difficulties and are not at all necessary where the projector gate aperture is kept clean.

A small tablet of thicker plywood should be blackened and centrally affixed to the upper margin, as shown in the sketch. The purpose of this is to carry the club initials or the personal monogram of the owner. These may be executed in carved wood, metal or transfer—or they may be specially enamelled by a sign writer.

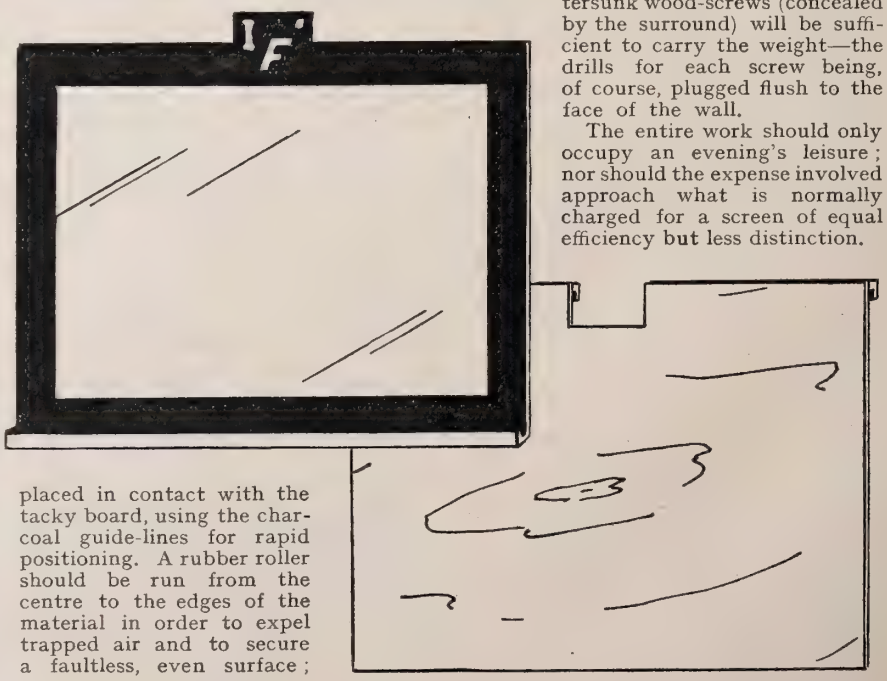
There is a plain back-board of 4.5-mm. plywood; also a removable dust-cover of thinner ply. The lower edge of the screen proper carries a rebated moulding to support this cover, which, in turn, has a similar moulding to retain firm contact with the top of the screen. A glance at the sketch will further explain this arrangement, the central recess at the top of the cover being necessary to avoid obscuring the permanently-visible monogram plate.

Practical.

The back-board should be cut slightly larger all round than the super-bead material. The board should then be rested against a warm radiator (or at a close yet safe distance from any kind of fire) and a viscous solution prepared by blending equal quantities of amyl acetate and "peardrop" cement.

When the board feels warm to the touch it should be placed on a smooth bench and an outline of the beaded material roughly drawn in charcoal, pencil, or crayon. The whole of the area so inscribed should then be quickly and evenly coated with a cold application of the cement mixture—none whatever being applied to any part of the beaded fabric.

The back of the latter should now be placed in contact with the tacky board, using the charcoal guide-lines for rapid positioning. A rubber roller should be run from the centre to the edges of the material in order to expel trapped air and to secure a faultless, even surface; if a wooden roller be used, it must first of all be draped in a single length of clean muslin.



To avoid cockling during the drying (which is very rapid), the plywood loose cover may temporarily be placed over the face of the screen. In the interval, attention may be given to the marginal surrounds and the monogram tablet. These are sufficiently simple to warrant no further description here, though it is imperative to use *spirit* black for the staining if it be intended to finish the job without undue delay.

The cover board may now be taken from the screen proper and the mouldings affixed. It is necessary also to stain these, a neat finish of matt black adding greatly to the harmony of the whole.

Erection.

At this stage, the body of the screen should be lifted and permanently secured to the wall of the theatre. In doing this, care must be taken to allow space for the cover beading to be slipped over the upper edge of the screen. Four countersunk wood-screws (concealed by the surround) will be sufficient to carry the weight—the drills for each screw being, of course, plugged flush to the face of the wall.

The entire work should only occupy an evening's leisure; nor should the expense involved approach what is normally charged for a screen of equal efficiency but less distinction.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, November 11th.

Battersea Men's Inst. C.C. "Photography by Night." C. W. Hovey.
Bays. and Padd. P.S. "Pictorial Work with Modern Roll Films." S. Whiteley.
Bethnal Green C.C. Practical Work.
Birkenhead Y.M.C.A. P.A. Joint Exhibition. W. R. Hodgson, G. J. de la Mare.
Birmingham P.S. (Ciné Section). "Colour Film." A. L. Lancaster.
Borough Poly. P.S. "A Knapsack Holiday in Lakeland." G. E. W. Herbert.
Brighton and Hove C.C. "The Delights of Colour Photography." R. M. Fanstone.
Bristol P.S. Stereoscopic Evening.
Cheltenham C.C. Beginners' Meeting.
Chorley P.S. Negative Quality. Members.
Coventry C.C. "A Dutch Fishing Village." T. H. Cox.
Croydon C.C. Ciné Lecture (Colour). J. H. D. Ridley.
G. E. Mechanics' Inst. P.S. Competition Evening. Prints and Slides.
Hinckley and D.P.S. 1936 Alliance Competition Slides.
Leek P.S. Print Criticism. S. Bridgen.
L.M.S. (London) P.S. "A Tour in Germany." G. R. Bolton.
Northallerton and D.P. and C.S. Gadget Evening and Print Competition.
Northampton N.H.S. "Pictorial Photography." R. Chalmers.
Partick C.C. S.P.F. Colour Slides and G.D.U. Slides.
Phœnix C.C. S.P.F. Portfolio.
Rotherham P.S. Whist Drive and Presentation of Awards.
Solihull P.S. "Successful Picture-Making for Beginners." E. A. W. Cave.
South Essex C.C. Visit Ilford Society.
S. Suburban and Catford P.S. "El Moghreb el Aksa." H. G. Neville.
Worcestershire C.C. Members' Evening.
York P.S. "Black-headed Gull at Home." F. Vear.

Thursday, November 12th.

Armley and Wortley P.S. "'Twixt Cartmel and Calder Abbey." S. Greenwood.
Ashton-under-Lyne P.S. "Still Life by Artificial Light." H. Kitchen.
Bath P.S. "Exeter Cathedral." (Lantern Lecture.) F. E. Haynes.
Blyth and D.C.C. "Castles of Northumberland." C. J. Young.
Bolton C.C. L. and C.P.U. Slides.
Brighouse C.C. Ciné Show. P. Schofield.
Bury P.S. "Across Scotland by the Wonderful Waterway." G. B. Kearey.
Camberwell C.C. One-Man Show.
Cardiff C.C. Seascape Competition.
Coatbridge Co-op. C.C. "Enlarging." J. Roberts.
Dunfermline P.A. "A-Roving in the Wilds of Ross and Sutherland." P. W. G. Gunn.
Greenock C.C. "Ancient Egypt." Dr. A. M'Aulay.
Hampshire House P.S. "A Tour in Southern Ireland." Miss E. A. Miller.
Harrogate P.S. Whist Drive at Church House.
Hull P.S. Bromoil Demonstration. D. J. T. Bagnall.
Isle of Wight C.C. "Pictorial Work with Modern Roll Film." Messrs. Kodak.
Keighley and D.P.A. Demonstration—"This Pictorialism." C. McDonnell.
Kinning Park Co-op. C.C. Bromoil Demonstration. J. Rosin.
Letchworth C.C. "Gadgets."
Liverpool A.P.A. "Art and the Camera." R. A. Johnson.
N. Middlesex P.S. Social Evening.
Padiham and D.P.S. A Talk on Lighting. E. Bradshas.
Preston C.C. Whist Drive.
Richmond C.C. "Westminster Abbey." H. W. Fincham.
Sinclair P.C. Photographic Competition.
Singer C.C. G.D.U. Lantern Slides and S.P.F. Colour Slides.
Stourbridge Inst. P.S. "The Oil Process." W. L. F. Wastell.
Stretford C.C. L. and C.P.U. Portfolio.
Sunderland P.A. "The Last Ounce." W. F. T. Pinkney.
Todmorden P.S. Development.
Urmston and D.P.S. Auction and Camera Night.
Watford C.C. Bromoil Demonstration. N. Gryspeerdt.
Wimbledon C.C. "With a Camera in Portugal and Spain." J. E. Roberts.

Friday, November 13th.

Royal Photographic Society. "How to get the best out of Dufaycolor." J. Mitchell.
Bethnal Green C.C. Judging and Criticism of Monthly Competition. W. Selfe.
Colne C.C. "Picture-Making and Worth-While Photography." H. G. Grainger.
Cowlairs Co-op. C.C. "The Ciné Camera." Talk and Demonstration. G. Paterson.
Dartmoor Lit. S. (Photo Section). Lantern Slide Postal Club.
Harrogate P.S. Y.P.U. Portfolio Prints.
King's Heath and D.P.S. Members' Lantern Slide Night.
Leigh Lit. S. "Faults in Negatives." Geo. Lee.
Newcastle and D.A.C.A. Dance.
Southend-on-Sea and D.P.S. "Amateur Photographer" Prize Slides, 1936.
St. Helens C.C. "Home Portraiture." J. H. Lee.
P.S. of Ireland. "Port Photography." C. J. Buckley.
Walkden and D.P.S. "Arts of the Medieval Wood Carver." J. E. Balshaw.
Wimbledon Ciné C. "Brunel and Harris" Cup Night.

Saturday, November 14th.

Accrington C.C. Social. Closing Night of Exhibition.
Hackney P.S. Outing—Chelsea.
Howard De Walden P.S. Informal Discussion.
Oldham Equitable P.S. Whist Drive and Dance.
Reading C.C. Social.
Walthamstow and D.P.S. Annual Dinner.

Monday, November 16th.

Ashington and Hirst P.C. Portraiture and Development.
Blackburn and D.P.S. First Night of Inter-Club Prints and Slides.
Blackpool and Fylde P.S. Talk on Composition. J. Smith.
Bournemouth C.C. Monthly Print Competition.
Bradford P.S. "Celluloid and its uses in Photography." H. G. Grainger.
Brighton and Hove C.C. Informal Portrait Evening.
City of London and Cripplegate P.S. "Hearty Homely Herts." H. Rose.
Derby P.S. "Making the Exhibition Print." S. Bridgen.

Monday, November 16th (*contd.*).

Dewsbury P.S. Y.P.U. Print Portfolio.
Erdington and D.P.S. Enlargers and Enlarging.
Finchley A.C.S. Films. Arranged by Mr. Lunniss.
Glasgow P.A. "Glasgow as Seen by the Artists of 100 Years Ago." J. Baillie.
Howard De Walden P.C. Closing date for "Daily Record" Competition.
Ipswich and D.P.S. Members' Contact Prints through the Episcope.
Kidderminster and D.P.S. "Dufaycolor." G. H. Sewell.
Kingston C.C. "The Evolution of the Competition Print." S. J. Gollop.
Lancaster P.S. "The Bromoil Process." I. Jackson.
Leeds C.C. Hayward Trophy Competition.
Leeds University P.S. "Still Life." D. Holmes.
Leek P.S. "Amateur Photographer" Prize Slides, 1936.
Liverpool A.P.A. "Thiocarbamide." R. L. Okell.
Newcastle (Staffs) and D.C.C. "Some Lecturettes." E. J. Warrillow.
Oldham Equitable P.S. "History of Middleton Church." T. K. Driver.
Oxford P.S. "Sark" (Autochrome Colour Pictures). L. Barrow.
Padiham and D.P.S. Criticism of Landscape Competition Prints. A. T. Bailey.
Preston C.C. "Amateur Photographer" Prize Slides, 1935.
Southampton C.C. "Through Denmark into Sweden." K. Baker.
Southport P.S. Demonstration—Enlarging. J. T. Rigby.
S. London P.S. Practical Portraiture Evening.
St. Helens C.C. "More Memories." C. E. Collings.
Tunbridge Wells A.P.A. "Early Days in Photography." E. R. Ashton.
Wallasey A.P.S. "Swiss and Italian Lakes." Miss A. M. Cann.
Walsall P.S. R.P.S. 1935 Competition Slides.

Tuesday, November 17th.

Royal Photographic Society. "Scottish Wanderings." G. B. Kearey.
Basingstoke C.C. Photographic Alliance Competition Prints, 1935.
Birmingham P.S. "Light, Colour and the Photographer." J. N. Cockin.
Blackpool and Fylde P.S. "Cairo and Round About." R. Sheridan.
Bridge of Allan P.S. "Romance and Reality in the Life of a Mining Engineer."
Cambridge P.C. Annual Autumn Competition.
Doncaster C.C. Lantern Slides—Demonstration. F. Moat.
Dunfermline P.A. "Composition and Nature." P. S. Smythe.
Exeter C.C. The Lantern Slide Postal Club.
Grimsby P.S. "The Story of Beverley Minster." F. Atkinson.
Guildford and D.C.C. "Portraiture by Artificial Light." Mr. Box.
Hackney P.S. "Miniature Photography." S. Clark.
Halifax P.S. Competitions. Closing date for House Exhibition Entries.
Harpenden and D.P. and C.S. "A Talk on Miniature Camera Work." W. G. Briggs.
Harrow C.C. Monthly Competition (2)—Still Life.
Howard De Walden P.C. "Night Photography." Messrs. Ilford Ltd.
Leamington and D.P.S. "Miniature Negative Photography." Messrs. E. Leitz.
Leeds P.S. "Lugano, Como and the High Pyrenees." J. C. Holmes.
Leicester and Leicestershire P.S. "Haunts and Nesting Habits of British Birds.'
Manchester A.P.A. Rambles Print Competition. J. White.
Monkland P.S. Lantern-Slide Making.
Morecambe and Heysham and D.P.S. "Some Natural History Subjects." J. Clegg.
Newcastle and Tyneside P.S. Members' Print Competition Criticism.
Norwich and D.P.S. "Modern Aids to Indoor Portraiture." Messrs. Kodak Ltd.
Norwood C.C. Lecturettes. Members of Bromley C.C.
Nottingham and Notts P.S. Display of 9.5-mm. Travel Films. A. G. Brown.
Palmers Green Ciné S. Projection Evening.
Peterborough P.S. "Here and There in East Anglia." B. G. A. Snelson.
Portsmouth C. and Ciné C. Lecturette: "Holiday Snapshots." H. Coker.
Rotherham P.S. "Child Portraits." Marcus Adams (Alliance Portfolio).
Rugby and D.P.S. "Landscape" Competition Evening.
Sheffield P.S. "Colour Filters." S. Brigden.
Small Heath P.S. "Tales of Dartmoor." F. W. Pilditch.
South Shields P.S. "Bromoil." H. S. Becke.
Stafford P.S. "The Amateur Photographer" Prize Slides, 1936.
St. Bride P.S. "Processing Colour Films." R. Harding.
Warrington P.S. L. and C.P.U. Print Portfolio.
Whitehall C.C. "Westminster Abbey." A. J. Mason.
Willesden P.S. Criticism of Members' Prints and Slides. J. H. Clark.
Windlesham C.C. "The Western Highlands of Scotland." A. E. Higgens.

Wednesday, November 18th.

Battersea Men's Inst. C.C. Lecturettes—"When We Started in Photography."
Bethnal Green C.C. Photographic Alliance Competition Prints, 1936.
Birkenhead P.A. Lantern-Slide Making—Demonstration.
Birmingham P.S. (Ciné Sec.). Holiday Film Competition.
Borough Polytechnic P.S. Third Slide Competition, 1936.
Brighton and Hove C.C. "Through Denmark into Sweden." K. Baker.
Bristol P.S. "Roderick J. Fry" Straight Photography Competition.
Cheltenham C.C. Beginners' Meeting.
Chorley P.S. "The Changing Countryside." F. Sellers.
Coventry P.C. Some Pictures and How they were Produced.
Croydon C.C. "A Naturalist on the Amazon." E. A. Robins.
Ealing P.S. Second Pictorial Competition and Criticism.
Edinburgh P.S. "The Print and Enlargement." J. G. W. Thomson.
G.E. Mechanics' Inst. P.S. "After-Work on the Print." W. E. Ginger.
Hinckley and D.P.S. Federation Prints and Slides.
L.M.S. (London) P.S. "Miniature Cameras." R. M. Fanstone.
London School of Hygiene P.S. "Enlarging." A. H. Durrant.
Luton and D.C.C. Members' Evening.
Northallerton and D.P. and C.S. "Carbro and Carbon." T. Ambler.
Partick C.C. Visit to Messrs. Photo Finishers, Ltd.
Phœnix C.C. Members' Night.
Shropshire C.C. "Colour Filters." Messrs. Ilford Ltd.
South Essex C.C. Members' Night.
S. Suburban and Catford P.S. Colour Evening.
Worcestershire C.C. "Dufaycolor." W. Hodson.
York P.S. "Pictorial Work with Modern Roll Films." S. Whiteley.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Time in See-saw Development.

In developing a roll film in a dish by the see-saw method, how much extra time, in addition to that given by the tables, should I allow to make up for the fact that any one part of the film is only in the developer for part of the time?

P. P. (Worcester.)

In the ordinary way you can quite ignore the fact that the film is not submerged the whole of the time; it becomes saturated with developer which continues its work even while the film is temporarily out of the dish. You therefore do not need to increase the development time at all.

Sunsets in Colour.

I have had some very successful pictures in Dufaycolor but have not yet been courageous enough to attempt a sunset. Can you give me any idea of the exposure likely to be required?

L. C. (London.)

It is quite impossible even to suggest exposures for sunsets. To begin with, a great deal depends upon atmospheric conditions and to what extent landscape or sea will be included. In the second place, directly the sun has actually set, the exposure time goes up by leaps and bounds. We are afraid that the only real guide is experience, but this certainly becomes rather expensive in the case of colour films. One or two experiments, noting down in each case the intensity of the light as determined by a photo-electric or extinction meter, should at least put you on the right track.

Freckles.

In taking portraits I find that freckles, although very faint in real life, appear as ugly black spots in my print. I may add that I use "Verichrome" film.

R. H. M. (London.)

To minimise the dark tones of the freckles you should use a yellow filter on the lens, choosing one that will increase the exposure about three times. You will probably do even better if you use the filter in conjunction with a panchromatic film.

Drying Marks.

I have a negative which, after being partly dried in a cool place, I removed to a warmer place to accelerate the drying. The result of this is that the part which dried last is appreciably denser than the rest. Is there anything I can do to remedy this, or is the fault irreparable?

G. S. (Peterhead.)

It is difficult, and sometimes impossible, to remedy such a trouble with a negative. If the difference in density is slight, it may be minimised, or even remedied, by giving the negative a long soaking in clean water and allowing to dry in an even temperature. A more drastic remedy is to bleach and redevelop it, but this, of course, involves some risk. It would be safer, and probably equally effective, to counteract the differences in density by shading the less dense portion of the negative during printing. If, by test strips, you find the different exposures that give prints of equal depth from each part of the negative, you will know exactly how long to shade.

Diffused Light for Enlarging.

Some time ago you published an article on diffusing screens for an enlarger. I think the type of glass was opal, but it might have been pearl. Will you please confirm this and let me know how the two sheets should be placed?

H. G. (Plymouth.)

We often refer to diffusing screens, and have had several articles dealing with the subject. Either finely ground glass or opal will answer the purpose, and, in the latter case, one sheet may be sufficient, as two will cut out a considerable amount of light. The diffusers are placed between the light and the condenser or negative; rather closer to the latter than to the former. If you are using electric light you should choose an opal bulb, which will enable you to get even lighting with less diffusion than would be needed with a clear or "pearl" bulb.

Home-made Epidiascope.

I am desirous of constructing an epidiascope and should be glad if you would give me an outline of the optical system, with dimensions and distances to serve as a guide. The projection distance will be 8 to 10 feet, and I shall use a lens of 16-in. focal length.

H. J. H. (Southall.)

In the usual form of epidiascope the object is laid face up on a horizontal support and the lens is above it as though the image were to be thrown on the ceiling. Just above the lens a mirror, about three inches square in your case, is placed at an angle of 45° so as to reflect the image forward on the screen. For the distances you mention the lens should be from 18 to 20 inches from the object, being adjustable over this range for focussing.

Enlarging with Ciné Lens.

Is the "Mira" special Kino-objective lens of 6-cm. focal length suitable for enlarging from $1\frac{1}{4} \times 1\frac{1}{8}$ in. negatives?

D. A. C. (Guildford.)

We are not acquainted with the particular lens you mention, but in general a cinematograph lens, being designed to cover only a very small negative, will not be satisfactory for enlarging from negatives $1\frac{1}{4} \times 1\frac{1}{8}$ in., since it will either throw no image at the corners or will alternatively leave the corners unsharp.

Film Speeds.

I have a Zeiss Diaphot exposure meter which is fixed at "26 Scheiner," and have been using Kodak Panatomic film, giving twice the exposure shown as I believe the film to be about 20 Sch. While away I was unable to get this film and used another make which I was told was 26 Sch. I accordingly used the exposure shown. The result, nearly a whole film underexposed. Am I right in thinking that this other film is not so fast as advertised?

F. P. (Cheshire.)

In giving the Panatomic film double the exposure worked out for 26 Scheiner you have actually been treating it as 23 Scheiner. For 20 Scheiner you would have to give not double, but four times the exposure.

We sympathise with you in losing a film, but the whole system of marking emulsion speeds is in such a state of utter confusion that you are bound to be misled at times. When you have such an experience as you describe your only course is to treat the film in future as though its speed number were lower, choosing a new figure that corresponds to its speed as you have found it by your own experience.

A Uniform Stain.

How can I get rid of a pinkish stain which appears on my films when finished? I think it comes from the anti-halo backing, and does not yield either to ordinary acid hypo or an acid hardening bath.

J. B. (Broxburn.)

The stain to which you refer generally disappears in an acid fixing bath and the subsequent washing. In some cases it yields to a very weak solution of ammonia. The usual course, however, is to ignore it, as, being even over a whole negative, it can have no other effect than possibly to increase the printing time.

An Impossible Task.

Would you kindly let me know what developer was used for the enclosed film, and the time taken in developing?

A. S. (London.)

We are sorry, but it is quite impossible to discover either the developing agent or the time of development from inspection of a finished film.

Miniature

1½×1½ Folding Univex de Luxe, self-erecting, frame finder, hinged back, size only 4×2×⅞ in., for snaps and Time. *As new.* Cost 15s... **9s. 6d.**
The Univex takes Gevaert Ultra-chrome 6-exposure roll film, 9d.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.
For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

Announcing

New "CHALLENGER" New

HERE, NOW, the New Talkie Projector with (1) 35-mm. purity standard size sound head, and (2) ELEVEN WATTS tremendous volume £125 0 0

The New 16-mm. De Vry "Challenger" Sound Projector leads the world to a new highest purity and quality with its 35-mm. full-size standard sound head. The projector of quality everyone has been waiting for.

16-mm. De Vry "Challenger" Talkie Projector, 750-watt direct coiled-coil illumination by larger 35-mm. size condensers and booster reflector, full purity 35-mm. sound head, 11 watts large volume, of genuine rating sufficient for large halls, schools; yet can be tuned to a whisper for homes. Silent or sound speeds by pushing a switch only, latest easy threading via minimum sprockets and balanced spacing. Dual shuttle movement. New removable aperture-plate for easy cleaning. "One-point" oiling system, to all parts. Rotary barrel shutter, flickerless and maximum light value. Ball-bearing shafts mounted in cast aluminium with the famous "De Vry" sprocket idlers. Perfectly matched 35-mm. sound system with the very latest filtration device for sound purity of low and highest frequencies, microphone and gramophone sockets, tone, volume controls. **Double exciter** lamps (the 35-mm. De Vry Feature, slide one in position without stopping show if the other fails, no other 16-mm. projector has this superb feature). 1,600-ft. capacity (takes any reel 50 ft. to 1,600 ft.) Illuminated controls via translucent panel resembling onyx marble. Large latest dynamic speaker. Latest new pressure plate device, can't scrape sound track. (The new De Vry is the only 16-mm. Projector with this new non-scratch track feature.) The whole outfit complete in two light portable carrying-cases.

"CHALLENGER"—The De Vry answer to the PERFECT Talkie. Amazing purity of 35-mm. quality.

Everybody's Reflex!

PILOT 6

THE LITTLE CAMERA FOR BIG RESULTS

Although amazingly inexpensive, the Pilot 6 is a **real** reflex camera in every sense of the word, and gives you the same working efficiency as much more costly apparatus.

It takes 12 exposures 2¼ in. square on 3¼×2¼ (8-exposure) film.

Shutter speeds: 1/25th, 1/50th and 1/100th sec., also B. and T. Focussing on ground-glass screen with deep hood; a magnifier for fine focusing is provided.

Dimensions: 3×3¼×4 in.

Weight: about 22 oz.

PRICES:

No. 13 Pilot 6, with f/6.3 anastigmat lens..... £3 13 6
No. 14 Pilot 6, with f/4.5 anastigmat lens..... £5 5 0
No. 15 Pilot 6, with f/3.5 anastigmat lens..... £7 10 0

Supplementary Portrait Lens, Light Filters, etc., supplied.

NOV. 11 REMEMBRANCE DAY

NIGHT PHOTOGRAPHY INDOORS

SELO LIGHTING SET

The Selo Lighting Set is of superior design and of especially strong manufacture and comprises an extra large spun aluminium reflector mounted on a solid stand, complete with Photoflood Lamp, 3 yards of flex and universal connecting plug. Price **17/6** Obtainable from all photographic dealers.

No longer must your camera be put away to "hibernate" during the winter. With the arrival of the long dark evenings it now offers you a new fascination—photography by your own fireside—picture-making in the comfort of your own home.

Ilford research, culminating in the introduction of reliable hypersensitive films and plates, has made this possible. Now, it is as easy to "snapshot" at home by night as outdoors on a sunny day, and to every camera user is opened up a vast new field of photographic enjoyment.

Vol. LXXXII. Wednesday, November 18th, 1936. No. 2506.

A Rolleiflex PICTURE

Here's a really beautiful shot—taken with a Rolleiflex and a Duto soft-focus lens. The Duto converts any normal lens into a soft-focus lens, and is made in sizes to fit any camera.

ROLLEIFLEX and Duto form an ideal combination. Rolleiflex is so easily manipulated—all the controls are so conveniently arranged that you can concentrate on your picture and snap at exactly the right moment. It takes 12 pictures on 8-exp. 3¼×2¼ 1/- roll film. Can also be adapted for plates, 35-mm. ciné film, or as a stereo camera. With Zeiss Tessar F/3.5 lens and Rapid Compur shutter speeded to 1/500th sec., T. & B. Rolleiflex costs only **£25.**

Ask your dealer to demonstrate, or write for literature from the Sole Importers:

Carry On, Mr. Amateur Photographer!

3 "Photoflood" Lamps in "Kodaflectors"; Kodak S.S. Pan. Film; f3.5; 1/25th second.

Kodak Super Sensitive Panchromatic Film and the Kodak Night Photography Aids will help you get indoor pictures after dark no less interesting than those you took outdoors during the sunny months—help you make them with no less certainty of success.

It's no trouble at all to plug one or two "Photoflood" Lamps into the electric light sockets. Their brilliant light, concentrated, directed where you will by the handy little "Kodaflector" Reflectors, makes indoor photography not only possible, but *easy* with any camera loaded with Kodak Super Sensitive Panchromatic Film. Be sure you get Kodak "S.S. Pan.," the lightning-speed film that's extra fast to artificial light.

"Photoflood" Lamps, **2/6** *each. "Kodaflector" Reflector,* **3/-**. *"Kodaflector" Outfit, including Reflector, Stand, and 9 ft. of flex, with plug,* **7/6**.

ANY AMATEUR with ANY CAMERA can CHOOSE his OWN SUBJECT and WIN . . £25

IN WALLACE HEATON'S "OPEN COMPETITION"!

If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Simple spotting to remove pinholes, etc., is all that is permitted. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

While we do not ***guarantee*** *to return prints, every endeavour will be made to do so when they are accompanied by suitably stamped envelopes. See that all prints have your name and address on the back, and that each package is stamped with full prepaid postage.*

An exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners.

£25 FIRST PRIZE **21/- WEEKLY PRIZE**

Address entries to "Open Competition,"

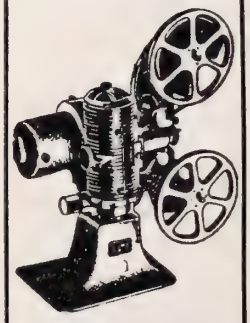
. . . THAT IT PAYS

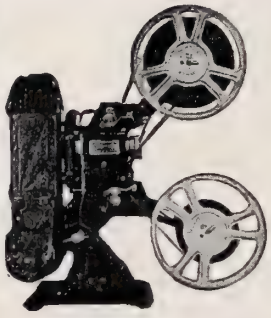


Weston-super-Mare.

"It has been a pleasure to do business with you, as our experience in the past over other transactions (not with yourselves) has been nothing but slackness and inattention, and it is refreshing to meet a more business-like outlook over exchange transactions." R. B.

Binley.

"I must assure you of my very best thanks for the prompt attention, quick delivery and, above all, great courtesy I have received at your hands. I must say that the bargain is a bargain indeed, for it has exceeded my expectations, for I must be quite candid and say that I never expected such a splendid instrument for the price." G. W.



The hundreds of letters that come from every part of the country are absolute proof of our straightforward dealings. We leave no stone unturned in our efforts to give customers every satisfaction—whether they need new apparatus, bargains, or the smallest accessories. Our stock is large and varied. We stock absolutely everything for photography, movies and talkies. Free demonstrations given at any time. All the best films can be hired from our library of 9.5-mm. super films. Our staffs are experienced enough to give you full guidance on which is the best apparatus to suit your particular need. Why not get in touch with us? Latest lists sent free and post free.

FILMO 'EIGHT'

EXCHANGE (1929) LTD.

Ciné & Still . . . . .

Whether your interests lie in the "single-picture" or the Ciné Camera, you can obtain the same service and facilities for either or both at the Westminster. The best and latest in apparatus and "incidentals" are in stock, awaiting your inspection—including, of course, specially generous terms for EXCHANGES and OUT-OF-INCOME purchase.

TWO NEW KODASCOPES

NEW MODEL 'E' KODASCOPE.

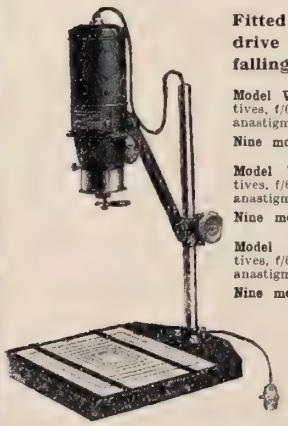
Model E
(as shown)

(16-mm.) Fitted with 300-watt lamp with direct lighting system, giving specially brilliant illumination. 2.5 Projection lens. Tilting movement, rapid motor rewind, variable speed, self-lubricating windings. Transformer model, 100/110 or 200/250 volts **£30:0:0**

Nine monthly payments of 70/-.

also

New 8-mm.



Model 8-35

With 200-watt lamp, usable on any circuit. Double the light as compared with earlier model, but only 21/- more in cost. Gives 30×22 in. picture at 14½ ft. Takes 200 ft. of film. Resistance 100/110 volts, 7/6 extra; other voltages 17/6.

£10:10:0

Nine monthly payments of 24/9.

NEW ENSIGN 'MAGNAPRINT' ENLARGER

Fitted with friction-drive rising and falling movement.

Model V/10, for 6×6 cm. negatives, f/6.3 Ensar anastigmat..... **£7:15:0**

Nine monthly payments of 18/-.

Model V/11, for 2½×3½ negatives, f/6.3 Ensar anastigmat..... **£8:10:0**

Nine monthly payments of 20/-.

Model V/2, for 3½×4½ negatives, f/6.3 Ensar anastigmat **£12:12:0**

Nine monthly payments of 29/5.

Also with 4.5 Magnar lenses.

Write for full list; post free.

ALWAYS EARLIEST WITH THE LATEST.

ASK FIRST AT THE WESTMINSTER.

IMPROVED ROLLEICORD

With its notable improvements the New Rolleicord becomes a real "Camera-de-Luxe," despite its economical price. Film wind is now automatic; overlapping of exposures impossible. New type hood and larger magnifier, and new ultra-efficient eye-level focussing arrangements. Focussing knob combines depth-of-focus indicator, and engraved exposure scales are provided. Both f/4.5 and f/3.5 models take all **Rolleiflex** accessories (angle mirror only excepted). Both models, too, are leather-covered.

Zeiss Triotar f/4.5 and Compur shutter to 1/300th sec., T. and B. **£14:10:0**

Nine monthly payments of 33/10.

Zeiss Triotar f/3.5, ditto **£17:10:0**

Nine monthly payments of 40/10.

Ever-ready Case, £1 0 0.

f/2.9 Lens WESTEX Miniature for successful Winter 'Snaps'

The "Westex" is the lowest-priced high-precision miniature, with the famous f/2.9 Radionar lens, of world-wide reputation. It focusses to 3 ft. and will give critically sharp pictures on winter days with cloudy skies; and the shutter is the well-known Prontor II, giving 1 to 1/175th sec., T. and B. Camera takes 16 pictures 4×3 cm. on standard V.P. spool, and is fitted with high-class optical direct-vision finder. Easy to manipulate, and most handy to carry **£5:12:6**

Nine monthly payments of 13/2.

Also with Vidanar anastigmat f/4.5 and Vario shutter, 1/25th, 1/50th, 1/100th sec.... **£3:12:6**

Nine monthly payments of 8/7.

Astounding Value!

2.5 FOTH-FLEX
Twin Lens Focal-plane Reflex

Takes 12 pictures 2½ square on normal 2½×3½ film. Only camera of its type with delayed-action focal-plane shutter, from 2 to 1/500th sec. and Time, f/2.5 Foth anastigmat lens..... **£13:10:0**

Nine monthly payments of 31/6.

Also as above, but with f/3.5 Foth anastigmat lens.... **£10:7:6**

Nine monthly payments of 24/2.

DEAD-ACCURATE READINGS IN AN INSTANT

for ARTIFICIAL LIGHT EXPOSURES

WITH THE

TEMPiPHOT

METER WITH STRENGTHENING AMPLIFIER

75/-
IS ALL YOU PAY FOR THE TEMPiPHOT.
AMPLIFIER COSTS 37/6.
Morocco Zip-fastener cases for either (if desired)....5/- each.

Photography in artificial light presents no difficulties when you own a Tempiphot. It is the *only* meter with an amplifier which increases the range of readings for recording artificial light exposures. There are no calculations to make. Readings for strong, poor, or artificial light are all contained on a single scale. Readings up to 120 seconds at f/9 with a film of 23° Scheiner can be instantly obtained. The Tempiphot can be used with or without amplifier. The amplifier simply plugs in when required, but the meter itself is the finest you can possibly use under ordinary conditions. Tempiphot is small and compact ; meter or amplifier actually do fit a waistcoat pocket. Make sure of perfect indoor results by getting Tempiphot now. Owners of Tempiphots requiring an amplifier need not return their Tempiphots to the dealer—just order the amplifier—it simply plugs in.

"This distance meter's fine; but where's the view-finder?"

"You've been looking through it all the time. They are combined in the Contax II."

"That's a help certainly. But is the meter really accurate enough for focussing these f/1.5 and f/2 lenses?"

"This distance meter works on the wedge principle. It is patented by Zeiss Ikon, and the base, being 4 in. long, will show differences of less than one inch when focussing close-ups."

"So you can use these lenses at full aperture then. But is all this talk about night photography really practicable?"

"Absolutely! The ultra-rapid Zeiss Sonnar is actually ten times faster than an f/4.5 lens, and so you see you can easily make instantaneous exposures at night with panchromatic film, for example, in the theatre or street, with the ordinary lighting."

"H'm: the Contax certainly does open up new fields for the photographer."

The Contax knows no limitations, and you can use it every month of the year and every hour of the day. For indoor sports (boxing, skating, etc.), dancing, indoor portraits, stage photographs, intimate close-ups at dinners and functions, stage shots of dancers, acrobats, exhibitions and street scenes, the Zeiss Sonnars are supreme.

TOPICS of the Week

BY the time these lines are in print the Prize Set of slides from "The A.P." Annual Lantern-Slide Competition will have started on its tour among the British photographic societies. This continues until May, 1937, and every available date was booked up some time ago—a tribute to the popularity of the collection. The touring set consists of 160 slides, and includes all the plaque and certificate winners in the seven classes of the competition. A number of others purchased from those sent in, but which did not win prizes, are also in the set. While the number entered this year was far in excess of that in any previous competition, the standard was higher. There were far fewer poor slides than usual, and as a result the judging was long and arduous, as not only was every one of several thousand slides projected on to the screen, but before final decisions were arrived at in any class some were projected four or five times, the quality being so very even among the runners-up. A matter that is worth noting is that while the landscape class received the greatest support in point of numbers, and was run very close by the portrait and figure class, the architectural class received the smallest number of entries. Whether this is another indication of the gradual eclipse of the larger camera for use with a tripod, so necessary for really good architectural work, it is difficult to say; but there is little doubt that the bulk of the subjects included in most of the classes might easily have been produced with miniature or small hand cameras, and doubtless many of them were. The list of prize-winners will be published next week.

THE LUNCH-HOUR.

Often the intervals in the working day make as interesting a picture as the work itself. An article on the latter will be found elsewhere in this issue.

The R.P.S. Dinner.

An ambitious scheme was outlined by Dr. D. A. Spencer, President of the R.P.S., at the Society's Annual Dinner at the Café Monico last week. The pressing necessity for a suitable building for their future home was occupying the serious attention of the Society, and to erect and equip such a building in an appropriate manner he estimated that £50,000 would be required. With this sum available they would include in the plan a lecture hall and exhibition gallery, ciné theatre, laboratory, dark-rooms, work-rooms and library, etc.; in fact, quarters worthy of the premier society. The appeal for funds would be made not only to members of the Society, but to everyone connected with the photographic industry or interested in the subject from every angle. We are entirely in agreement with Dr. Spencer, and hope that the efforts of the Society will be crowned with success. Other speakers at the dinner were Mr. E. E. Blake, Managing Director of Kodak Ltd., who proposed the Society, with special reference to its possibilities in cinematography, and Mr. Olaf Bloch, of Ilford Ltd., who proposed the Guests, and voiced the hope that a Chair of Photography would be established at one of the Universities. (We suggest that the London University, in view of its extensions swallowing up the R.P.S. building, would be the most fitting for the purpose.) The Marquess of Salisbury replied for the guests and Sir William Pope to the toast, "Our Research Workers," proposed with characteristic humour by Mr. W. L. F. Wastell. A most successful evening, upon which the organiser, Mr. R. H. Lawton, is to be congratulated.

Ciné Portraits in Colour.

If any doubts existed in the minds of those present at the R.P.S. Annual Dinner, regarding the possibilities of Kodachrome as a practical and successful method of colour cinematography for the amateur, they were entirely dispelled by the admirable display given during the evening. All the members of the Council of the "Royal" had been filmed individually, and the series of animated portraits in colour that were projected on a 15-ft. screen were remarkable examples of what 16-mm. Kodachrome film could do. The life-like and familiar poses and expressions of each sitter as he appeared on the screen were hailed with enthusiasm by all the members present, and many of the portraits were distinguished by outstanding pictorial qualities that reflected great credit on the representative of Messrs. Kodak who was responsible for their production. The film, which was taken in the Society's studio by floodlight (during an interval in a recent Council meeting), should form a most valuable addition to the archives for the edification of future generations of members of the R.P.S.

The Vogue of the Ciné.

Mr. J. E. Saunders, lecturing at the "Royal" on new cameras, referred to the vogue of the 8-mm. ciné, an instrument which, he says, is "catching on" among people to whom the running costs of the average 16-mm. are a little more than they can afford. In one city he was told that 80 per cent of those using the small ciné were school teachers, which he hailed as a good thing, for it meant, he said, that sooner or later a lot of the stupid red tape that hedged round any attempt to get the sub-standard films into schools would be swept away. When the teachers begin to use the ciné for their own enjoyment they will very soon want to use it for teaching. Another use of the small ciné which is becoming evident is a reversion to the oldest use of professional photography—the sending of a personal record of oneself to absent friends. Those who have to do with the amateur ciné business declare that more and more people who have relations in the colonies whom they have not seen for years are keen to exchange ciné portraits, which are more revealing than the "still" portrait or even the snapshot can be.

H. and D.

To the modern photographer the initials H. and D. scarcely stand for anything human. They have the barrenness of a chemical symbol. And indeed he may be forgiven, because it is now sixty years since Dr. Hurter, revolting against the empirical basis on which photography was founded, persuaded Mr. Driffield, an engineer, to join him in a series of researches which have become classical. The work of these two men laid the foundation upon which modern photography has been built. The tenth biennial Hurter and Driffield lecture was recently delivered by the man who himself had most to do with the founding of the lecture twenty years ago, namely, Mr. F. F. Renwick.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Modifying Negative Contrast.

Will you give me working details for partially redeveloping negatives so as to remove undue density and halation?
F. R. (Bodmin.)

This process is suitable only for certain kinds of negatives, but your mention of halation suggests that you have an idea of the cases to which it applies. A dense and halated window in an interior is an example of the condition that can be modified better by this method than by any other.

The real difficulty lies in judging the correct stage at which to stop redevelopment, and this knowledge is best acquired by experiment with one or two suitable negatives of no particular importance or value. The operation can then be performed with confidence on negatives that it is important to improve rather than spoil.

If the negative has been dried it may be soaked before treatment, although this is not really necessary, as the bleaching action is carried as far as it will go, so that unevenness of action in the early stages is not important.

Make up the following solution:—

Potassium bichromate	60 grs.
Hydrochloric acid	200 min.
Alum	300 grs.
Water	15 oz.

The alum is to counteract the softening action of the acid on the gelatine.

Apply this to the negative until the image is completely bleached right through to the back. Wash very thoroughly in running water or many changes till all the removable bichromate stain has gone. At this stage the image could be redeveloped till it is stronger than it was at first, or it could be entirely removed by fixing in hypo. The method combines partial redevelopment with partial removal.

For redeveloping, an M.Q. or similar solution should be used. It should either have been used before so that it is more or less exhausted, or it should be considerably diluted. In either case, the object is to have a solution that will work very slowly and quite evenly. To the latter end the dish should be rocked gently and continuously in all directions.

The image slowly builds up again. It must be watched carefully, especially from the back, until it is seen that only the deep-seated parts of the image (which caused the trouble) are still in the bleached condition. The negative is then rapidly rinsed and transferred to the fixing bath. Here the undeveloped silver is removed, and all that remains is to wash and dry the negative as usual.

The method can be applied to any negative that is weak in shadow detail, and over-dense in the high-lights.

Renovating Bellows.

I have an old-fashioned camera the leather bellows of which have become very hard and brittle. How can I improve their condition? *L. I. (London.)*

First remove all surface dust with a brush followed by a duster, extending the bellows first as far as possible. Now rub lightly and thoroughly with a soft rag repeatedly moistened with a little castor oil. Repeat this every day for several days until the leather is soft and pliable. Sweet oil is nearly as good for the purpose.

Thenceforth, go over the bellows occasionally with a little furniture cream or polish. A suitable mixture can be prepared by dissolving a piece of bees-wax as large as a marble in an ounce of turpentine, and adding a teaspoonful of linseed oil.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Some Enlarging Points

The production of a first-class enlargement is by no means as simple as some people seem to expect, and the worker who is attempting the task for the first time this winter may be glad of a few pointers as to the best methods of dealing with the subject.

THE most important factor towards a good enlargement is unquestionably the negative. Even an expert cannot make a good enlargement from an unsuitable negative. The worker should, therefore, examine his stock of negatives and ruthlessly put aside any which are of really poor quality. Of course, there will be some which will respond to treatment, such as intensification or reduction, and these should be made into a separate pile, but the beginner will find it best to endeavour to obtain a reasonable enlargement from his most perfect negatives first, and to leave the others until more experience has been gained.

The negative, then, should be well developed, but not over-developed; it should have plenty of detail in the shadow portions and no clear glass or celluloid. The high-lights should not appear solid to the eye, and it should be quite possible to see the variations in tones in these parts.

The Paper.

Now comes the question of discovering a suitable paper for the negative. Numerous brands and grades are now on the market in the bromide family, and while chloro-bromides are more or less confined to one grade for enlargement purposes, they are not always suitable for the subject in hand.

The point is to decide which paper will suit the range of tones of the negative. If this range of tones is fairly short, that is, if there is not a very strong contrast between the brightest high-light and the deepest dark, a normal paper will probably suit, or even a vigorous if the scale is very short, but if there is a very great difference apparent a soft paper should be selected.

The surface of the paper to be used will be largely a matter of choice for the individual, unless the enlargement is intended for some particular purpose, when the customary surface should be ascertained first. It should be remembered, however, that a glossy surface shows up the imperfections much more than a matt, and is also very much more difficult on which to do after-work.

The Developer.

As the compounding of the developer has a definite relationship to the time of exposure, this subject cannot be dealt with by itself. Developers vary amongst amateurs, and although the manufacturer almost invariably includes a suitable formula, it is to be feared that very few amateurs use that particular formula.

Bromides seem to respond best to amidol developer, which gives a real black tone, and develops up to quite rich shadow blacks. The developer is easily prepared with sulphite of soda and amidol, in a proportion of one of amidol to twelve of sulphite made up quite freshly for each occasion. A typical formula is: Sulphite of soda (cryst.) 1 oz.; water 20 oz.; when dissolved add amidol 40 grs.

One fault may be mentioned here, and that is the sodium sulphite crystals may not be fresh, and the result is a brownish tinge on the enlargements, usually described as a degraded black. Many an amateur has been dissatisfied with his prints through this unsuspected cause. The crystals should have no white powder around them, otherwise they are getting stale. Of course, the anhydrous salt obviates this possibility to a great extent. Only half the quantity of the anhydrous is required.

M.Q. developer of the standard type will also produce good bromides, but this should not be overworked. Fresh developer for each print is the ideal, and certainly worth it if really good quality prints are essential. The amount of restrainer, usually potassium bromide in this developer, has a definite effect on the tones of the print if incorrectly exposed.

Exposure.

The strip method of testing the exposure, so often advocated, is definitely the best, care being taken that the timing is accurate, and, equally important, that the test strip is fully developed. Bromide paper takes from one to three minutes to develop up fully, and the cause of bad-coloured prints is often to be found in insufficient development.

It must be remembered that a bromide print does not continue to develop the longer it is in the developer, but reaches a stage of finality where development ends. This is the ideal at which to aim, because a properly exposed bromide fully developed will exhibit good colour characteristics.

It is not wise to judge a print by the dark-room light, which is usually very deceiving, and the test strip should be taken out into bright light, preferably daylight, examined to decide which is the correct exposure, and the time of both exposure and development strictly adhered to.

Other Factors.

Uneven exposure is often an unsuspected cause of poor enlargements, and this is frequently due to the bad centring of the light in a condenser enlarger. This centring should be done immediately the required degree of enlargement has been decided upon, and should be done very carefully, particularly on large work.

Spots and blemishes occurring on the enlargement are usually attributable to dirt on the carrier, or on the plate glass of the easel, or sometimes because the developer has not been flowed over the print evenly. This latter fault can to a great extent be obviated by soaking the exposed print well in water before placing in the developer, when little trouble will occur in this direction.

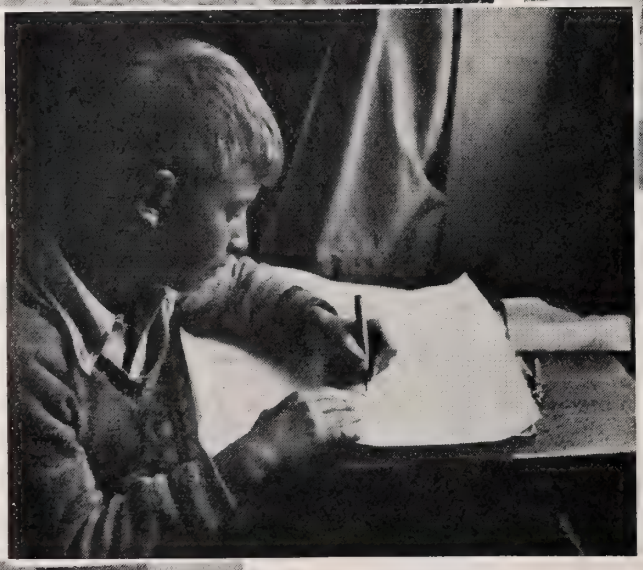
A mask of black paper should be placed round the negative in the carrier. Unless this is done, a certain amount of white light from the edges may "creep" on to the picture during exposure and produce fogged or uneven margins.

Naturally, the negative will have been spotted before enlarging, as black spots are extremely difficult to remove from an enlargement without the work showing. Shading, however, is very useful when making enlargements, and if it is found that the foreground becomes much too dark before the sky has had the chance to develop out, careful shading with a piece of card, kept moving all the time, will hold back the foreground while the sky gets fully-exposed. Interesting experiments can be tried with this shading card to make the utmost of every negative.

The PHOTO

By A. C. AUKER.

Busy Hands.



Metal Worker.

WORK is, or was intended to be, the common lot of man. Most people have some work to do, and those who have none are to be pitied, because the doing of things provides, *inter alia*, one of the chief interests in life. The universality of labour and the interest it engenders mark out this subject of work as one of the most fruitful fields for photographic endeavour.

There are times when the photographer feels that his district has been exhausted for picture-making. Then it is that he should turn his attention to the common round and the trivial task, which will often furnish rich photographic subject matter.

Begin with the children at their simple tasks. Patience and tact are, however, necessary here, but it is well repaid if the little people can be caught unawares, when interest is centred on the work in hand. It is essential to await *the* moment before shooting.

Home Work.

The home itself will provide endless subjects, if the idea of work is kept in mind. On all sides it will be realised that a variety of tasks are being accomplished day by day by the household brigade that will yield pictures, from the lady of the house to the servant girl.

People who minister to our needs, such as the milkman, baker, and shop-keeper, all offer possibilities whilst in the course of their duties.

The farmer and his workers ought to be regarded kindly by the photographer, because the farm is a place where photographic interest is concentrated in rich variety. Men, machines and animals, in many different combinations and operations, provide a wonderful field for the man after pictures. The show is never dull, in summer or in winter.

The various trades provide a whole catalogue of subjects for the photographer. The market stall-keeper, the blacksmith, the painter, the mechanic—all are worthy of study.

Why is it that a picture of a man doing a job of work makes such an appeal? It is because of its human interest, which is, after all, the life and soul of a good picture.

The best equipment for this type of photography out of doors is a camera of the automatic focussing type (whether reflex or

Another kind of Home Work.

GRAPHY of "WORK"

not), because this facilitates the vital task of rapid and accurate focussing. The lens should have an aperture of f/4.5, or, better still, f/3.5, as frequently one is faced with close-up subjects in indifferent light, and adequate exposure could not otherwise be given. With a lens of f/3.5 aperture and a super-sensitive panchromatic film or plate it is easy, too, to take pictures by artificial light. An exposure of 1/10th sec. should give good negatives of well-lighted street scenes, for instance.

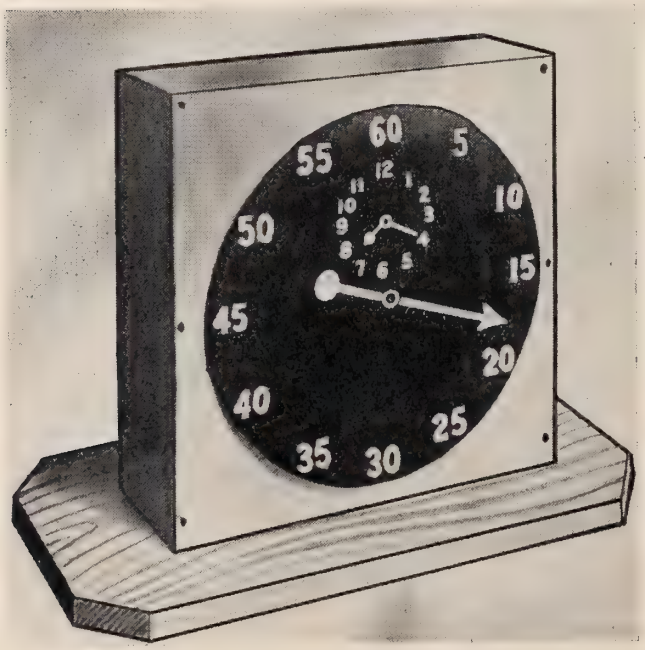
If one is prepared to take the extra care necessary in the processing of

Cobblers at Work.

The Builders.

miniature negatives, and to enlarge every negative that is worth while, there is no doubt that the modern miniature precision-made camera is the ideal. The cost of the outfit is considerable, but it is superb equipment. The great advantages are that the small, light-weight camera, lens-hood and filter can all be carried in one's pockets without inconvenience, ready for those opportunities which occur at odd times when the anti-miniature photographer would not have his camera with him. Moreover, the running costs of films, etc., are small.

Perhaps even more important is the much greater depth of focus given by the small camera. This enables the full aperture of the lens to be used even for very close-up subjects, without risk of the nearest and farthest objects losing their identity through extra fuzziness.

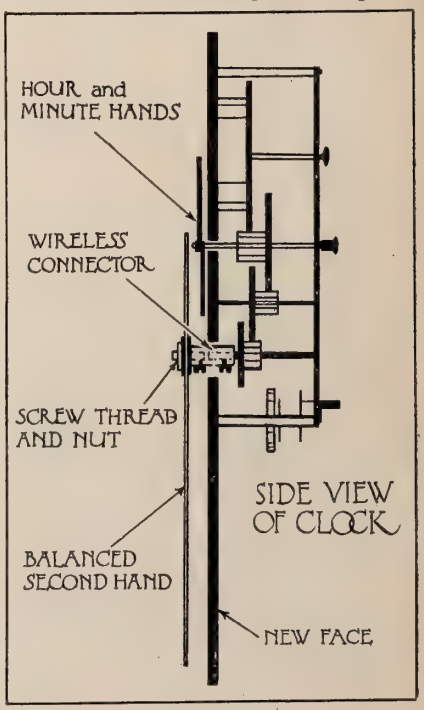


At home, when pictures of work by members of the family are being contrived, the necessity for the very large aperture lens and high-speed equipment is not so urgent. More time can be taken in dealing with the subject, and longer exposures can be given, and two or three attempts can be made if the first is not a success. During the autumn and winter evenings many such pictures can be made by artificial light, and with practically any camera, provided high-speed panchromatic films or plates are used.

Landing the Catch.

Readers' Hints, Tips and Gadgets

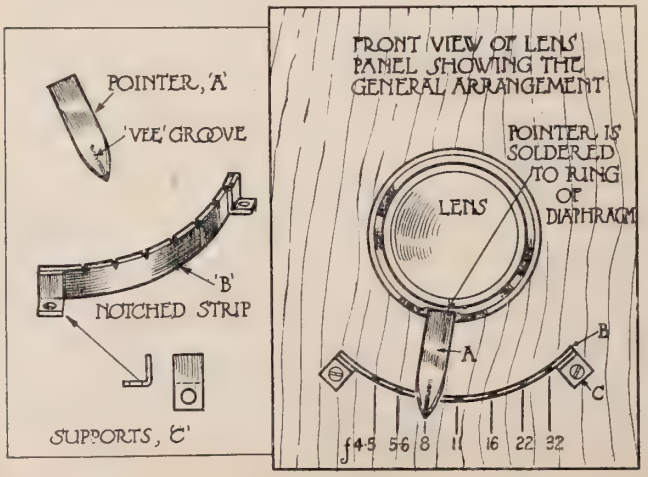
A DARK-ROOM CLOCK.



WHEN a proper dark-room clock with large second-hand is not available, an ordinary household alarm (providing it has a seconds dial) may be easily adapted to serve that purpose.

Allow the clock to run down, take the movement from its case, and take off the hands and face. Draw out a larger face, numbering it up to 60 as in the one illustrated, and paste it on to cardboard or three-ply wood. Allowing for the second-hand spindle of the clock to be the centre of this new face, mark the position of the hour and minute-hand spindle, and draw out a circle for this, numbering it up to twelve in the usual way. This dial has to be quite small.

The new hands can be cut out of thin sheet brass, taking care that the weight of the large one is equally divided each side of its spindle. As this second-hand will now revolve above the other two the spindle to which it is fixed needs lengthening. A small wireless connector will serve this purpose. One end of it is secured to the second-hand spindle, and the other holds a piece of brass thread. The big hand is placed on this thread, between washers, and a nut screwed down on top.



The smaller hour and minute hands are fixed on as were the original ones; that is, the hour hand on the outside of the spindle, and the minute hand on the shaft that revolves inside it. The hands and figures can be painted with white or luminous paint. Any pattern of case can be added at the discretion of the worker. With that of the type illustrated, the clock movement was first fixed in position on the back of the face, and the front of the case cut away to allow for it pushing in.

L. W. BOLTON.

A POSITIVE "STOP" FINDING DEVICE FOR HORIZONTAL ENLARGERS.

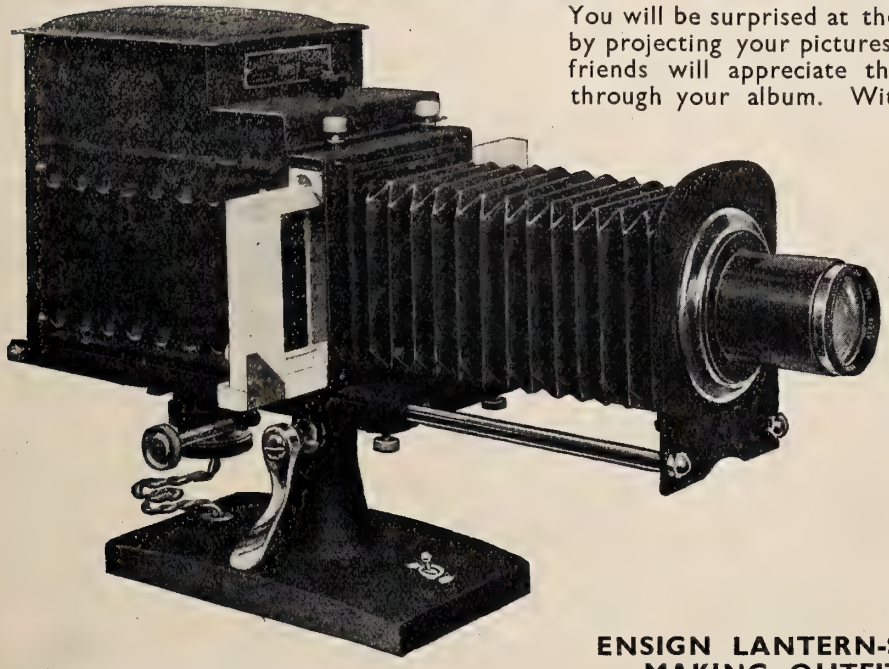
THE difficulty of reading the stop markings of an enlarger lens in the dim orange light of the dark-room led to the making of the following simple device, whereby any "stop" can be found by touch without the necessity for looking at the lens mount at all. One of the strip contacts of a pocket torch battery was cut off, and shaped to a point at one end (A). A small indentation was made by means of a screwdriver tapped sharply with a light hammer, and the pointer thus made was soldered to the movable ring on the lens mount which actuates the iris diaphragm, as shown in the sketch.

Next a thin strip of half-inch brass was obtained, and two small pieces cut off and bent to form angle brackets (C), in each of which, as can be seen, a small hole was drilled. The strip was then cut to the desired size (found by experiment), and bent to a semi-circular shape, the two angle pieces being now soldered to the ends (B). The bent strip was then held in position beneath the lens of the enlarger with the pointer resting on it, and the pointer was pulled round, the position of each stop being carefully marked on the strip, after which notches were cut at each mark.

All that remained to do was to affix the strip in its correct position on the lens panel, this being done by means of small screws passed through the holes in the angle pieces. The pointer rests on the strip, pressing lightly on it, and the small dent in the point ensures it "clicking" home each time it passes one of the notches. If desired, the numbers of the stops can be indicated on the bottom of the lens panel in large figures, thin lines being drawn from the numbers to the appropriate notch in the strip, but in practice I have found this unnecessary. By simply counting the little "clicks" (which can be felt rather than heard) it is possible to know just what "stop" is engaged.

L. G. PAULE.

Lantern Slides



reveal all the beauty

in your pictures . . .

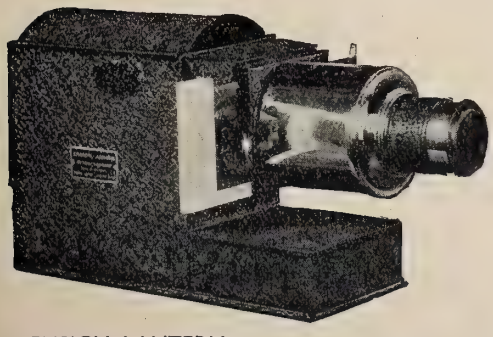
Project them with an

ENSIGN OPTISCOPE

ENSIGN OPTISCOPE Model 6A.

You will be surprised at the beautiful effects that are obtained by projecting your pictures with an Ensign Optiscope. Your friends will appreciate them so much more than looking through your album. With the Ensign Lantern-slide making outfit you can make a lantern slide as easily as you can make a contact print.

ENSIGN OPTISCOPE
Model 6A



Equally suitable for black-and-white or coloured (Dufaycolor) pictures mounted as slides. For use at home or in small halls. Takes 250 or 500 watt lamps. In handsome fibre carrying-case, and including slide carrier and all necessary leads and plugs (without lamp).

With **ALDIS UNO** Projection Lens, 8 or 10 in. focus..... **£8 : 10 : 0**

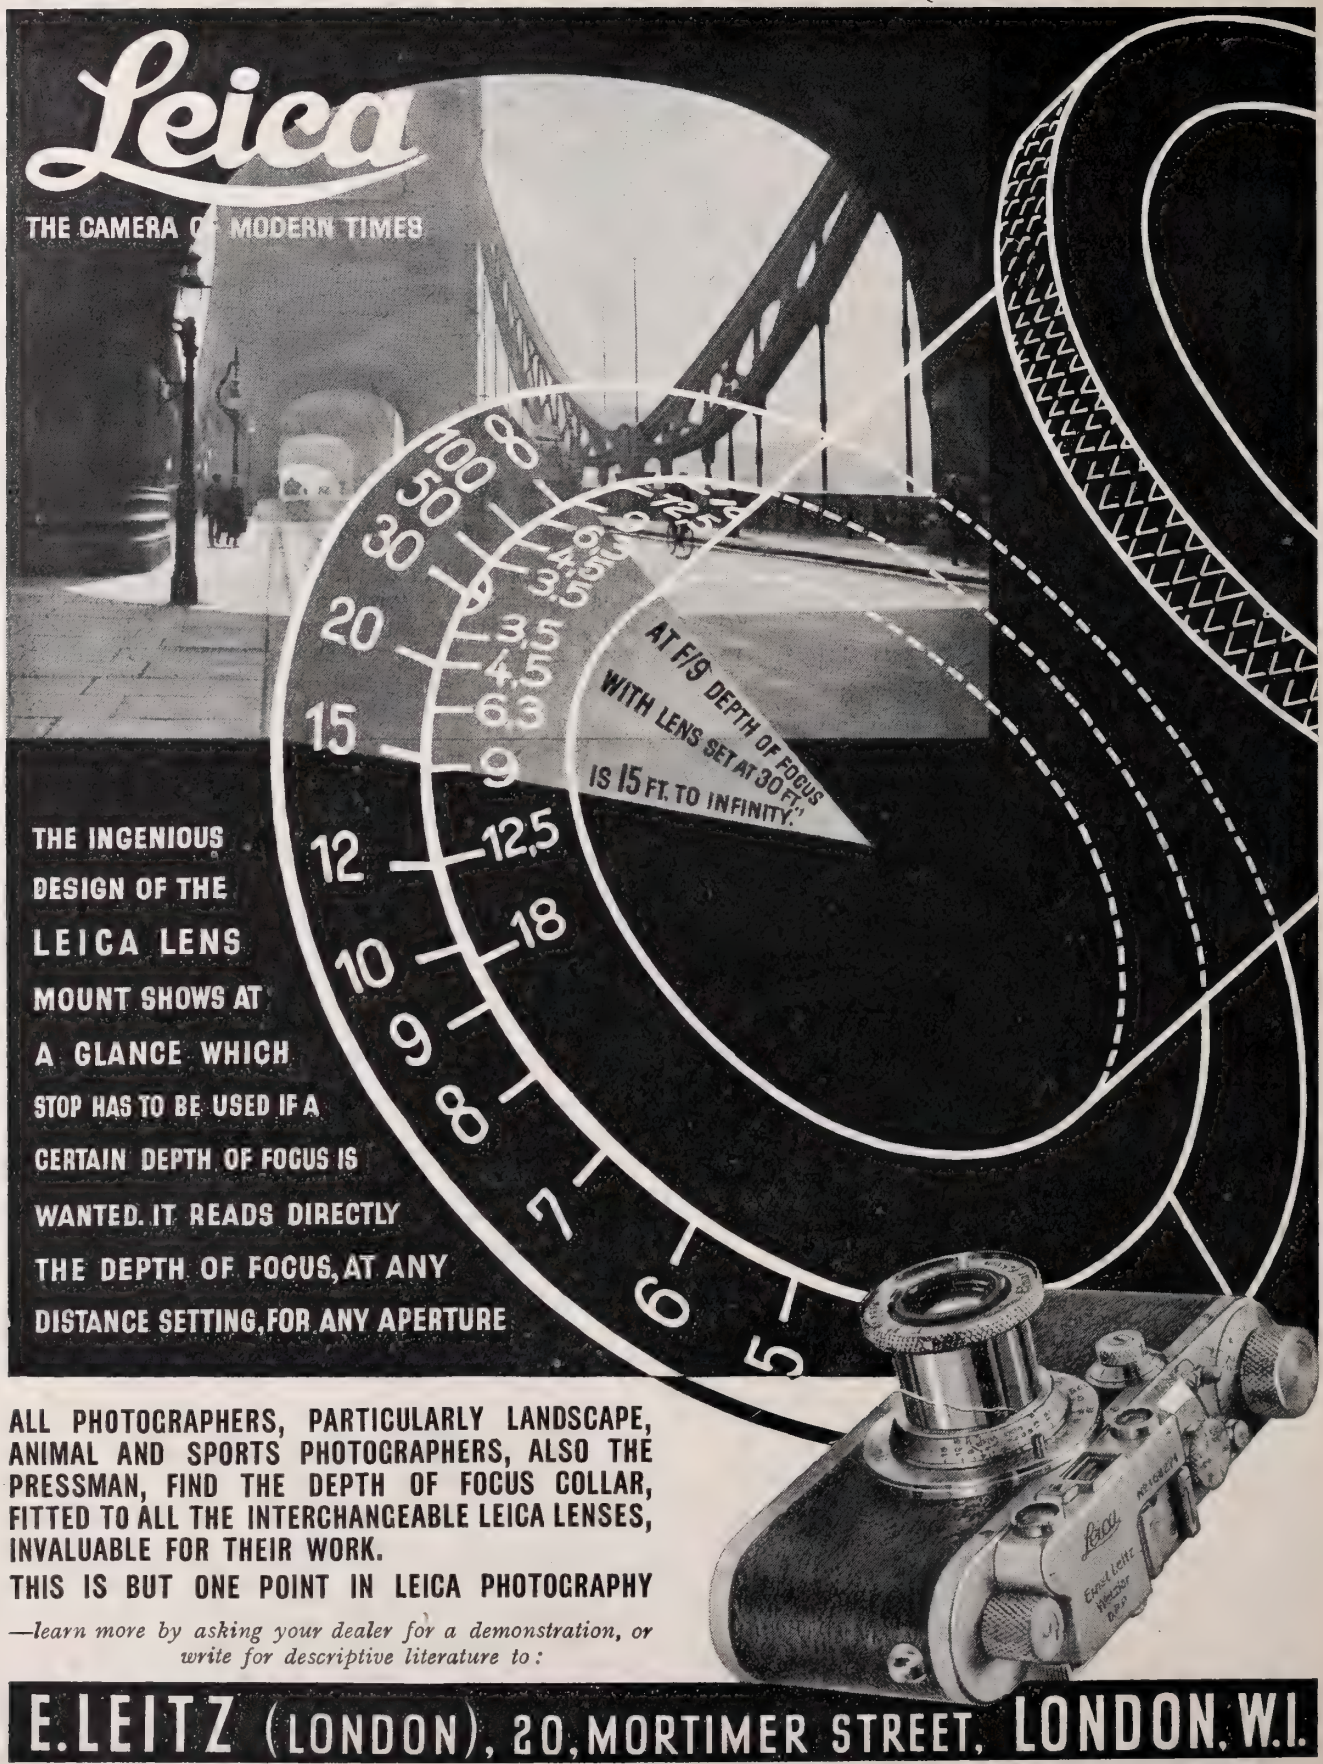
ENSIGN LANTERN-SLIDE MAKING OUTFITS

Enable lantern slides to be produced simply and as easily as a contact print. Everything is provided (except actual lantern plates). Printing frame with guides for Leica or Contax Ciné negatives in strip, negative masks and glass, packet of 12 combination cover-glasses and 12 masks for either Leica, $2\frac{1}{4} \times 2\frac{1}{4}$ or $2\frac{1}{4} \times 1\frac{5}{8}$ size **5/6**

ENSIGN LANTERN.

ENSIGN LANTERN

A well-made lantern for home lectures and entertainment. Double achromatic lens, 6-in. focus, in focussing mount, 4-in. Plano Convex Condenser, slide carrier. Takes any 60-watt lamp.



Complete in fibre carrying-case (without lamp)..... **£2 : 15 : 0**

Ask your dealer for a copy of "Optiscope Projectors for All Purposes," by Ensign, or write to ENSIGN, Limited.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

"MINIATURE" NOTES

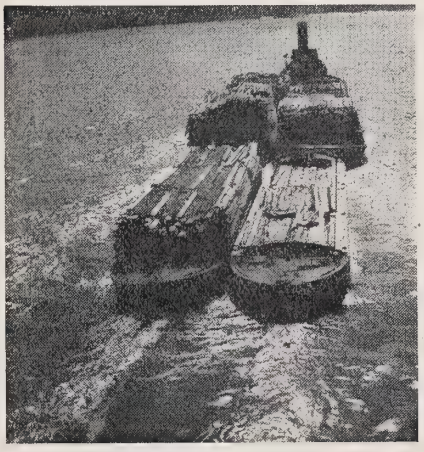
Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

The Small Square Reflex

By F. READ.

Bush House.

THERE must be many readers of "The A.P." who weekly look with covetous envy at the new types of cameras advertised at prices of anything from £20 to £80.



"It would not be so bad," think they, "if one only knew for certain that such cameras could really turn out work every bit as good as my larger instrument." The writer himself thought so for quite a long while, and had intended to go on with his well-tried quarter-plate camera, feeling confident that no smaller camera could hope to beat it. Yet such is the frailty of his character that he recently bought a $2\frac{1}{4} \times 2\frac{1}{4}$ inch film camera costing over £20.

A Little Cautious.

It will be noticed that the necessary courage to "go the whole hog" and change to a real miniature, using 35-mm. ciné film, was lacking. Perhaps he is still a little bit "quarter-plate minded," but the very thought of using the tiny ciné films for all types of work gives him cold feet. Still, there is no doubt that plenty of photographers do get what they want on one and a half square inches of film; perhaps he will eventually become one of their number.

Meanwhile, the $2\frac{1}{4} \times 2\frac{1}{4}$ in. negative still seems most unfamiliarly tiny. In comparing this size with the old quarter-plate there are so many things that have to be considered. The old controversy on the question of "Films versus Plates" is, of course, quite out of date. The modern panchromatic film is quite as good as the corresponding plate; in one way better, for it has the enormous advantage of comparative freedom from pinholes, and the like. This is one of the things that make miniature photography possible; on plates we have had pinholes, due to fragments of glass, that would obliterate a face on a "miniature" negative.

Another unfamiliar point is that there are twelve exposures to be taken before the film can be developed without waste. So far it has been only too easy to take twelve—not just to get the film used up, but because this type of camera does offer such an easy and perfect way of securing exposures. The simplicity and quickness of action, the wonderful facility of focussing full size (and not losing the image when the exposure is actually made), the depth offered by the relatively short-focus lens at about

Barges at Blackfriars.

f/6, the rock-rigid front, all combine to put a new aspect on the photographic field open to a really keen worker.

Yet there is more than this to be considered. Intriguing and fascinating as are the new subjects available, a worker who can only afford to feed one camera wishes to know how his old flames, "Portraiture," "Still Life," "Architecture," and the rest of the crowd—not forgetting the Mother of Art, "Landscape"—will fare. So far we have used the new camera without thought of the special demands of the subject, and in two months we have secured some sixty or seventy negatives

In the Orchard.

that fill us with joy for their marvellous technical qualities.

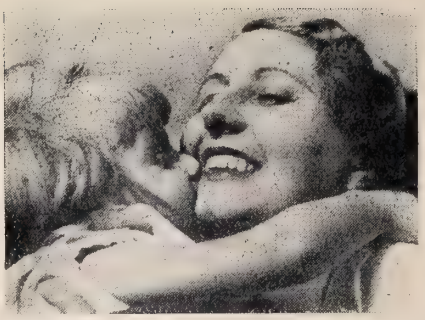
The photograph of Bush House shows that architectural subjects are within the scope of the new toy, in spite of its lack of rising front. No "correction of verticals" has been made in the enlarging, yet the lines are very satisfactory.

For portrait snapshots the tiny reflex seems the perfect instrument. Do the children at the apple-tree look as though they knew that a camera was trained on them?

Changing Composition.

Moving objects are, of course, within its scope. Though the barges were admittedly not moving very fast, yet the composition they made seemed to change very rapidly indeed. But with one eye on the screen, and a finger on the hair-trigger release of the shutter, one can very easily seize the exact moment for shooting.

On the technical side the writer has not adopted any of the special devices of the thorough-going miniaturists. For developing he has used his usual M.Q. and the see-saw method, taking care to develop softly in order to keep down grain. One of these days he may get a negative that will be so good that he will simply have to enlarge it the size of a house. Perhaps that achievement will be the signal for really "going miniature"—but for the present the $2\frac{1}{4} \times 2\frac{1}{4}$ negative seems just ideal. And think of that really usable aperture of f/3.5 on winter days!



For "miniature" photography in dull weather, at night, or in the theatre, a post, pillar, ledge, rail, parapet, lamp-post, arm-rest or chair-back should be sought; even a wall is useful. Get what support you can, and try your luck at $\frac{1}{4}$ second. With $\frac{1}{8}$th second camera-shake should be non-existent.

GETTING CLOSER STILL

IF there is one thing about miniature cameras which appeals to me more than all their other advantages, it is that one can make real close-ups with certainty of their being correctly focussed.

But there is just one thing about the operation of focussing which quite a number of people seem to miss. The focussing of close-ups requires a totally different "technique" from other photo-takings, if it is to be done with comfortable slickness, and with tolerable certainty of securing the desired result. By all means adjust the focussing screw to get the aim somewhere around right, but to achieve the final touch at the critical moment requires a little more finesse.

Instead of focussing for the distance, the distance is adjusted for the focus; in this way. With the feet slightly apart, and one of them rather more forward on the ground than the other, with the camera held at eye or at chest level, according to

whether it has an optical or a focussing range-finder, and having got a quick and reasonable sort of "focus" on the subject, one exerts immediate self-repression against the temptation further to readjust the lens. Instead of this, one just leans steadily the least bit forward or back, the while the trigger-finger prepares to shoot when sharp. After a couple of tries at this method, one never wants to go back to refocussing the lens repeatedly. Besides, the lens can be pushed right out to start with, so getting the closest up, in place of just a close-up.

D. C. MARRYAT.

A Reminder for the Developing Tank

WHEN developing miniature negatives in a tank it is helpful to have a reminder as to the time at which development is due to finish, particularly if more than one tank is being used at the same time.

Fig. 1.

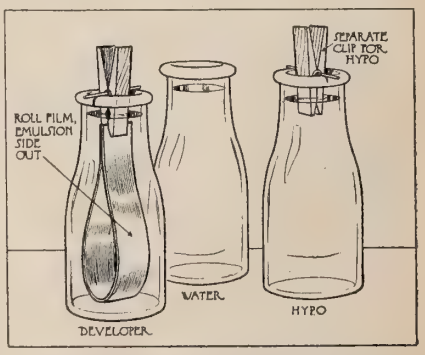
Users of the Correx tank have probably noticed that a dial is embossed on the lid for this purpose. Since the divisions are those of the clock-face, they are easy enough to mark out on any tank. The casual will be content to lay out the divisions by eye, but the meticulous will probably prefer to scribe a circle with dividers (putting a cork in the centre hole to support the stationary leg) and to divide the said circle carefully into 30-degree divisions with a protractor. The ultra-meticulous will not be content with a mark for every five minutes; 6-degree divisions, then, give the exact location of every separate minute.

When made, the marks can be made conspicuous by suitably painting them with white cellulose varnish. As an indicating hand, a shape such as that shown in Fig. 1 can be cut from white ivorine or any other light-coloured waterproof material. This is slipped over the centre raised portion of the lid, and can be freely turned to point at any predetermined time. As will be seen by the photograph Fig. 2, it not only greatly improves the look of the tank, but is of assistance in avoiding incorrect developing by forgetting the time the film is due out. This can very easily happen, when, in using one of the slower fine-grain developers, the total time may be anything up to an hour.

A similar clock dial can easily be painted on tanks of other patterns not provided with a dial already incorporated.

B. ALFIERI, JUN.

Fig. 2.



A "Processing Plant" for Ensign Midget Films

USERS of that popular little camera, the Ensign Midget, may, like the writer, have experienced some difficulty in preventing mechanical damage during development. There is a tendency for the film to roll up, and when "fine-grain" developers are used, these being slow in action, the "see-saw" method becomes tedious.

The following is a solution of the problem. The articles necessary are three wide-mouthed milk bottles, one-pint size, which can be purchased at a cost of a few pence each. A few wooden clothes-pegs of the spring pattern are also necessary.

The first bottle is filled with "fine-grain developer." This stays in the bottle, which is filled to within one inch from the top. When not in use the developer is protected from the action of the air by the insertion of a discarded waxed top from another bottle. The second bottle contains plain water, and the third contains acid fixing hardening solution.

In use, the "processing plant" is simplicity itself. The film is separated from its protecting paper, and without allowing it to coil up the two ends are clipped together, with the celluloid side inwards, so that the film strip may be inserted in the bottle of developer with the emulsion side outwards.

By turning the clip round several times the film strip is revolved in the developer to avoid markings, otherwise the operation takes care of itself. The progress of development can be watched through the bottle by the safelight of the dark-room, or the "time and temperature" system may be used.

When development is complete the film is taken out, dipped into the bottle containing water for a minute and then transferred to the bottle containing the fixing solution. Unless the wooden clip is discarded after use, as it will be impregnated with hypo and unfit for the developer again, it is a good plan, after dipping the film into the water, to replace it with a second clip that is used exclusively for fixing.

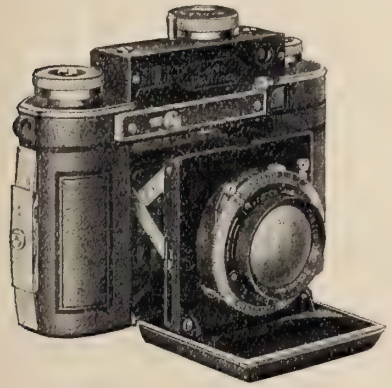
The developer may be used for half a dozen successive film strips, but it should not be over-worked. Final washing is done in the writer's case in a third bottle, or by any other means favoured. This method can also be used for short lengths of film of 35-mm. width, when a few exposures are cut from the strip for development before the whole is completed.

R. M. FANSTONE.

Do not leave acid hypo from day to day in an open dish, or the volatile sulphurous acid (from the meta-bisulphite) will vanish into thin air. But if you do break this rule, put in some more metabisulphite before using the hypo, and all will be well.

If your camera has no baseboard to protect the lens, don't lose the lens cap. It costs quite a lot of money to have a lens repolished.

If you treasure your prints, or if your friends are likely to, fix them properly. Two baths in succession is a good idea, scrapping the first and promoting the second to first place after each batch is done.



Modern Miniature Cameras

THE CERTO "DOLLINA II."

THE "Dollina II" camera belongs to the class of miniatures taking a 36-exposure length of ciné film and giving pictures 36×24 mm. Its overall size is 5×3¾×1⅝ in., and it weighs a little over 1 lb.

When closed, the lens is completely protected by a baseboard. On pressing a catch the camera opens automatically, the front being pushed forward by lazy-tongs. It carries a lens which may have an aperture of f/2.9 to f/2, mounted in a Compur shutter.

The focussing is carried out with the aid of the coupled range-finder on the top of the camera, rotation of the knob seen on the range-finder in the illustration pushing the front forward by compressing the lazy-tongs. Focussing can be carried out equally well with the camera open or closed, and the knob is scaled in feet.

The range-finder gives a full-sized image, and on test was found to be capable of detecting displacements equivalent to less than half the depth of focus of an f/2 lens. The view-finder is built into the body of the camera just below the range-finder, from which it is separate.

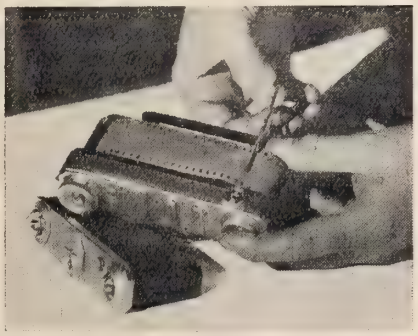
The camera is loaded with a standard 36-exposure cassette, the film being pulled across the back of the camera on to a take-up spool. On turning the winding-knob and so drawing the film along, the perforations engage with a small sprocket. When this has been turned to an extent corresponding with the advance of the film by one frame the winding-knob locks automatically. The film is thus advanced between exposures by pressing a button to unlock the mechanism, and then winding until it locks again. A small counter keeps a record of the number of exposures made, and this is set at zero each time the camera is loaded.

The prices range from £12 17s. 6d. for a camera fitted with a Steinheil Cassar f/2.9 lens in normal Compur shutter to £19 19s. when fitted with a Schneider Xenon f/2 lens in a Compur Rapid shutter.

The "Dollina I," which is absolutely identical with the Model II, except for the absence of the range-finder, costs some £4 4s. less. We are informed that a range-finder can subsequently be added to the "Dollina I" if desired. The camera is sold by Messrs. Actina, Ltd., 29, Red Lion Square, High Holborn, London, W.C.1.

Miniature films will be developed with as much care as the photographer himself could devote to them by Messrs. Wallace Heaton, of 127, New Bond Street, W.1. For this special "Microlux" fine-grain development some over-exposure is required, and it is necessary to state when handing in the film what ratio of over-exposure has been given. For less fully-exposed negatives an "Individual" service, providing the finest grain that the conditions permit, is offered. In either case, the film is developed by an expert under laboratory conditions, which fully justifies the charge of 4s. 6d. for a 36-exposure strip of 35-mm. film or 3s. 6d. for roll films up to 3¼×2¼ size.

Miniature Camera Gossip



By LANCELOT VINING.

I WAS very glad to see that the new "A.P." feature, "Miniature Notes," published on 4th November, started with the article, "What is a Miniature Camera?" I feel that a great many more opinions are wanted on this point before the size is finally settled.

Only last week I asked the owner of a small twin-lens reflex if he thought it was right to include a camera with a negative of 5.06 square inches in the miniature class. He said, Certainly not, 2¼×2¼ should be the limit. Then I asked him to multiply 2¼×2¼ and he was surprised.

Before the arrival of the Leica and Contax, etc., there was never a thought of calling a camera using a film 2¼ in. wide a miniature, but the trade seemed to think that the 35-mm. film cameras were too weak to stand alone and brought in all up to 2¼×2¼ to bolster them up.

The Royal Photographic Society has formed a miniature group, and has included the 2¼×2¼. At the moment I

Removing a short length of exposed film from the Contax for development.

am on the committee and ready to do all I can for it, but let us be honest with ourselves and call it the "Miniature and Small Camera" group; we could then include the 3¼×2¼ cameras. They use the same size film as the small reflex cameras, and at the moment I think they have a real grouse at being left out.

Give Particulars.

I advise readers when sending queries always to mention the make of camera they use, as no two work alike.

Under "Miniature Matters," on 4th November, D. M. (Wimbledon) asked for advice about developing short lengths of 35-mm. film; the answer he received referred to the Leica Camera. In case he has a Contax, here is a method I use almost daily and so far I have not had a failure.

When the required number of exposures have been made, for example, we will say six, take the camera into the dark-room, remove the back, and with a pair of small nail-scissors cut through the film, close up to the supply spool. Remove the exposed cut-off portion and put it on one side for developing, then take the end of the cut film in the camera and push it firmly into the slot in the empty spindle, roll on about an inch, replace spindle in camera and make sure, by feeling, that the teeth on the feeder are engaging in the film, replace back, and, when you return to the light, move your film counter from 6 to 10. Total loss four frames, and the exposed six frames can be developed at once.

The above refers to Ilford, Kodak and Agfa films, spooled for Contax, with paper trailers fore and aft and also when films are in containers.

Electric Cell Meter, Yes or No?

Two questions I have been asked more than once of late:—

(1) Is a cell meter a necessity?

(2) And what is the most important thing about "miniature" work.

I will answer the latter first. I think the most important thing is to produce as nearly as possible 36 perfect negatives on one spool, a very difficult matter when subjects and light vary greatly. I often have a film to develop containing both daylight (sun and dull) and electric light (time and instantaneous) exposures.

Now you can guess my answer to the first question. I am never without my cell meter, it lives in my ticket pocket.

Crumbs from the "Royal" table.

It is a long time since I have enjoyed an evening function as I did the R.P.S. dinner at the Monico. I was lucky to have been placed at a table with Mr. Olaf Bloch, of Ilford Ltd., on my right; Mr. and Mrs. W. G. Briggs opposite, Mr. and Mrs. Paul Shillabeer within talking distance, and Mr. W. L. F. Wastell near enough to keep us all in order.

At the R.P.S. Dinner. The President and Chairman, Dr. D. A. Spencer, talking to the guest of honour: the Marquess of Salisbury.

What a speech Mr. Wastell made. I don't think it was fair of him to make us rock with laughter so soon after a really good dinner; he was proposing the toast of the Research Workers, and claimed that Adam was the first of them, searching for trouble in the Garden of Eden—and finding it. I think he had his tongue in his cheek during most of his speech.

A PORTRAIT HINT

By DAVID CHARLES.

THE only time a professional photographer takes a portrait from waist-level is when the dress is more important than the face; in other words, when it's a fashion study he is making. The main reason is that a low viewpoint shows too much of the sitter's nostrils, and not enough of her "crowning glory," the permanent wave.

When portraits are criticised, the cause of the dislike is often vague, but there is not the slightest doubt that this is one very frequent reason. It is one detail in which the miniature camera with an eye-level range-finder may be regarded as scoring a point over those of the reflex-focussing pattern.

One simple way of overcoming the obstacle is for the photographer who uses a reflex to stand on a stool. It will be found, on measurement, that the camera lens, at normal waist-level, is about nine or ten inches below the eyes of a seated person. Since his lens should usually be at or slightly above the level of those eyes for a good portrait, a stool of ten to twelve inches in height will be admirable.

The illustration shows another way over the difficulty, and in practice it will be found a very good way, too.

The Reflex at eye-level.

Blowing out dust with a vacuum cleaner.

DUST

By G. K. SEAGER.

I WONDER how many film-users have a notion of the literally tremendous precautions which are taken to ensure their material being as free from dust specks as is humanly possible? The determination of the manufacturer that he, at least, should not be blamed for spotty negatives or prints, is unswerving. I fear we do not quite live up to the high ideal set us by his example.

Dusting out the inside of a camera, by means of an old tooth-brush, on to a sheet of white paper, is often a revelation. Some cameras can't be cleaned that way, but nearly every household vacuum-cleaner has a reverse action which blows a strong blast of air, and that will quickly dislodge any accumulation of dust from inaccessible corners. Even a pair of bellows, or, as a last resource, the valve of an inflated cycle-tyre, can be similarly used.

Dust makes its appearance in enlarging, too. Just because these tiny films have to be placed between glasses, we have six surfaces on which dust can cling, and every speck of it will mean a white spot on the print. But six strokes of a soft brush do not add materially to the time it takes to make an enlargement.

Fine-Grain Developers.

BUFFERED BORAX FORMULÆ.

A "BUFFERED" borax developer is one in which borax is used as the alkali, but in which the alkalinity is reduced by the addition of boric acid. The reduction of alkalinity is desirable as lessening the activity of the developer and so tending to fine grain, but if it is achieved merely by cutting down the amount of borax the alkalinity is liable to change so much during development that the behaviour of the developer becomes unreliable. This does not happen if the borax is maintained at its original amount, or even increased, and boric acid is added to counteract it.

A formula usually described as "Modified D.76" is made by adding 125 grs. of boric acid to every 20 oz. of D.76 (see our issue of November 4th, p. 458). The time required for development is double that necessary with the unmodified D.76.

Although the formula is usually presented as though it were sponsored by Messrs. Kodak Ltd., we find on enquiry that they do not recommend it, on the grounds that it very speedily loses its activity in use, being susceptible to the reaction products of development. This, of course, does not alter the fact that it is a good developer provided that great care is taken not to overwork it.

The formula they recommend is known as D.76 d., and contains 70 grs. each of borax and of boric acid to every 20 oz. of developer. The full formula is as follows:—

Kodak D.76 d. (Formula A.)

Metol	22 grs.	(2.5 grm.)
Sodium sulphite (anhydr.)	44 grs.	(5 grm.)
Hydroquinone	2 oz.	(100 grm.)
Borax	70 grs.	(8 grm.)
Boric acid	70 gr.	(8 grm.)
Water up to	20 oz.	(1,000 c.c.)

Formula B contains 18 grs. (2 grm.) of metol and 22 grs. (2.5 grm.) of hydroquinone in place of the quantities given, but is otherwise identical.

Development time, activity, life, and all other details of use are exactly as already given (November 4th) for D.76.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

FLARE SPOTS.

Having recently acquired a miniature camera with a wide-aperture lens, I have been trying my hand at night photography. In the enclosed photograph the group of three lamps at the right of the picture is reproduced, recognisably though rather fuzzily and faintly, towards the left of the picture. How can I avoid this, and why does it happen?

H. M. P. (Salisbury.)

These secondary images are known as "flare-spots," and are due to multiple reflections within the lens. Owing to the necessarily complex structure of these ultra-rapid lenses, and the number of possible reflection-paths when there are perhaps eight air-glass surfaces, it is not always possible for the designer to avoid them.

Your only cure is to refrain from including in your picture the lamps which are the main source of light, and to use a lens hood to ensure that as long as the lamps are outside the field of view their direct light will not fall on the lens.

SCUM ON NEGATIVES.

Some of my miniature negatives are disfigured by white marks which look like a deposit on the surface of the film. I can remove them by rubbing, but I am afraid of scratching the film in so doing. How do they arise and how can I remove them safely?

G. M. (Liverpool.)

The deposit you describe is almost certainly due to lime in one form or another in the washing water. If the film is wiped free of drops when it is hung up to dry these marks are less likely to appear. They can be prevented by adding a few drops of acetic acid to the last wash water. They can be removed from an already dry film by soaking it for a while in water containing a little acetic acid.

PARALLAX CORRECTION.

I believe some of the more expensive cameras have view-finders with correction for parallax. My camera has not got this refinement. What errors am I likely to find through its omission?

J. T. M. (Acton.)

A finder set parallel to the axis of the lens but at a distance of, say, 3 in. above it will always include a view whose top and bottom boundaries are 3 in. higher than the boundaries of the picture as received by the film. To cut 3 in. off the top of a building is not an appreciable error, but to cut 3 in. off the head in a close-up portrait may very easily spoil the picture. The error can be avoided by aiming 3 in. low whenever an error of 3 in. is likely to be noticeable.

CLEAR CORNERS.

Among my miniature negatives I occasionally get one on which, in place of the picture, there is nothing but a dark patch in the middle of the film, leaving the corners clear. Can you tell me why this happens?

H. G. L. (Maldon.)

We think you are using a camera of the type in which the lens is carried in a tube which has to be extended and locked with a bayonet catch before taking the photograph. And we suspect that you occasionally forget to carry out this important little operation.

MINIMISING GRAIN.

I have some negatives taken on a very fast film and badly developed which show excessive grain when enlarged. Is there any way of minimising this?

B. S. (Portsmouth.)

The usual advice in such a case is to enlarge on a paper of very rough surface. It is even more effective to throw the enlargement a shade out of focus, as this seems to conceal the grain to a most gratifying extent while making an almost imperceptible difference to the sharpness of the picture.

DRYING A FILM QUICKLY.

Is there any way of drying a film quickly? I have been told that a bath of methylated spirit as commonly used for plates is dangerous for films.

G. F. C. (Bournemouth.)

We think you will find it satisfactory if you bathe your film for five minutes in 5 per cent formalin, wipe off as much water as possible and dry by heat. We cannot answer for the effect, if any, upon the grain.

MINIATURE CAMERAS

We are the only firm in Great Britain specialising exclusively in miniature photography. Leicas, Contaxes, Rolleiflexes, Exaktas, Super Ikontas—we have every model, lens and accessory always in stock. Our Miniature Camera Repair Service is unique, and, once again, we are the only people undertaking exclusively the processing of miniature films. Our staff will be glad at any time to give absolutely frank advice about the choice of suitable apparatus or accessories. We claim that, as genuine miniature camera specialists, the service we can offer miniature enthusiasts is unparalleled.

THE REFLEX-KORELLE
A NEW MODEL

The Reflex-Korelle, for 12 2¼×2¼ negatives on the 3¼×2¼ film, has always been one of the most popular reflexes; particularly on account of its ability to take telephoto lenses and its quick and convenient shutter wind coupled with lever film transport. The new model, while retaining these features, now has a shutter giving an additional range of slow speeds: 2 seconds, 1 second ½ second, 1/5th second and 1/10th second. This improvement represents the one feature that was required to make the Reflex-Korelle the ideal instrument for those photographers requiring a really versatile single-lens miniature reflex taking the popular 2¼-in. square picture size.

PRICES: With f/3.5 VICTAR, £14 10s.; f/2.9 RADIONAR, £17 13s.; f/2.8 TESSAR, £23 19s.

FINE-GRAIN DEVELOPERS
A new complete range by R. G. LEWIS.

In addition to all the well-known proprietary brands of fine-grain developers, such as Meritol, Ultrafin S.F., Supramin, etc., we normally keep in stock, we have for some time prepared a special paraphenylene-diamine-glycin developer from our own formula. This developer, which was essentially intended for use with supersensitive panchromatic films, has been so well received that we have now produced a range of similar developers, all based on paraphenylene-diamine, each of which possesses certain definite characteristics and is designed to give the most satisfactory results in particular given circumstances.

Sease No. 1.
Sometimes referred to as "straight" paraphenylene, yields the finest possible grain at all times but requires three to four times increase in exposure for supersensitive panchromatic films (Agfa ISS, Kodak Super X, etc.), or about twice normal exposure for fine-grain panchromatic films (Agfa FF, Kodak Panatomic).

Sease No. 2.
The standard paraphenylene-diamine formula. Yields a very slightly coarser grain than the No. 1 formula, but only requires twice normal exposure for supersensitive panchromatic films and slight or no increase for fine-grain panchromatic films.

Sease No. 3 (modified).
A special developer for supersensitive panchromatic films. A little less than double normal exposure required.

Paraphenylene-diamine-metol.
The most suitable developer for use where photographs have been taken under bad lighting conditions, for stage, action and candid photography in general. This developer has been evolved to produce shadow detail, gradation and contrast combined with exceptionally fine grain in cases where only minimum exposures are possible.

All the above with the exception of the Metol Developer (costing 1s. 9d.) are priced at 1s. 2d. per tin to make 20 oz. The developer can be used in each case for approximately four to five films. Our special paraphenylene developers are prepared from the purest chemicals and are put up freshly every few days. If used in accordance with the instructions they can be depended upon to produce consistently uniform negatives.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

CONTAXES:

Contax Model II, f/1.5 Sonnar lens. As new £52 10 0
Contax Model I, latest wedge-type range-finder, f/1.5 Sonnar lens. As new....£39 10 0
Contax Model I, latest wedge-type range-finder, f/2 Sonnar lens. As new....£29 10 0
Contax Model I, latest-type shutter, f/2.8 Tessar. Practically as new....£19 10 0
Plate Back for Model I Contax....£2 10 0

LEICAS:

Leica Model III, chromium, f/2 Summar lens. As new £31 10 0
Leica Model III, black, f/2 Summar lens, ever-ready case. Practically as new....£29 17 6
Leica Model III, black, f/2 rigid Summar lens, ever-ready case. Practically as new....£26 17 6
Leica Model I, non-interchangeable f/3.5 Elmar, case. Practically as new....£8 17 6
Another, as above. In good average condition £7 15 0
Leitz 5-cm. f/2 Summar, non-collapsible. New condition....£10 10 0
Leitz 13.5-cm. f/4.5 Elmar, coupled. Excellent condition £11 10 0
Flashlight Attachment for Leica Model II or III £3 7 6

FREE LITERATURE ON WINTER PHOTOGRAPHY

"MINIATURE ENLARGERS," by R. G. LEWIS. Deals comprehensively with all the leading types of miniature enlargers and accessories, which are frankly discussed with regard to their suitability for use with various negative sizes and their adaptability for different special purposes.

Zeiss Lenses lead

This picture won the first prize of £3,000 in the "Daily Herald" competition (£2,500 and an additional £500 for a registered "Daily Herald" reader). The lucky photographer was Mr. F. H. Done, of Northwich.

Courtesy of "Daily Herald."

This picture won for Mr. R. Jenkins the 1935 first prize of £2,500.

Courtesy of "Daily Herald."

It is significant that both these prize-winning pictures were taken by cameras fitted with

ZEISS LENSES.

The lens is the eye of the camera. No matter how good a camera may be—even if it is the finest precision instrument—or however perfect the sensitive material with which the camera is loaded, good pictures cannot be obtained unless the lens is perfect.

Both these pictures were taken with Zeiss Tessars f/3.5, and it is easy to see the sparkle and life there is in the snaps, although of course they suffer very much from the process of reproduction.

Zeiss lenses are universally recognised as being the finest optical equipment of their kind. They give sparkling brilliant pictures, full covering power, detail in the shadows, and are fitted by most camera manufacturers to their best instruments.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLX.

Miss HILDA JORDAN.

From information communicated to our Special Representative.

"MY interest in photography was aroused about fifteen years ago, when I first attempted to do my own developing and printing. About the same time I discovered *The Amateur Photographer*, and the illustrations in that journal fired me with enthusiasm and a desire to produce pictures by photography. Incidentally, I have never yet made a print which has entirely satisfied me; but perhaps for that very reason my keenness has increased rather than diminished in the course of the years.

"Photography seems to me to be the perfect hobby, many-sided and adaptable to all times and circumstances. Moreover, it combines admirably with other hobbies. My own experiments with the photography of wild flowers, especially Alpine plants, in their natural surroundings, are an endless source of interest.

"Practically all my negatives are made while on holiday, generally abroad in the Alps and elsewhere. Consequently, most of them fall into the record class, although I always try to find the best possible arrangement of the subject. Landscapes, such as vistas of distant mountains, appeal to me very strongly; but I am also attracted by street and market scenes, especially against-the-light effects, and patterns of light and shade in any form; while I should like to experiment further with the decorative possibilities of plants. Photography seems to me unique in its power to reproduce the play of light.

"For a number of years I have used a $3\frac{1}{2} \times 2\frac{1}{2}$ Sinclair Una camera, with a lens of rather longer focus ($5\frac{1}{2}$-in.) than is usually supplied for that size. With this I use panchromatic film packs and cut films, a K 1 or K $1\frac{1}{2}$ filter, and a tripod. These films are developed with Azol or Rodinal by the time and temperature method, in a dish, in total darkness, the green safelight being used only for the subsequent rinsing and transferring of the films to the fixing bath.

"Recently I have also acquired a Leica camera, and am delighted with the results; in fact, I am fast turning into a 'miniature fan.' The large number of films at one's disposal certainly tempts one to expose without proper consideration of the subject. On the other hand, it is often an advantage to make several exposures on the same subject from different points of view.

"The price of panchromatic films, even in $3\frac{1}{2} \times 2\frac{1}{2}$ size, makes this rather an expensive proceeding, but with a miniature camera one can do it without feeling extravagant. In street scenes, too, the miniature camera scores by its unobtrusiveness, and the rapidity with which it can be brought into action. I must confess that in my case the light weight of the Leica also tells in its favour, at any rate on whole-day excursions on foot, when one is already burdened with a rucksack. However, I shall probably continue to use both cameras.

"The Leica films are developed in a Correx tank with one of the special fine-grain developers, using a stop-bath between developing and fixing.

"My enlargements are generally made on Kodak Royal bromide paper, and developed with amidol for at least three minutes, at a temperature of about 65°. I also like Kodak Kovita chloro-bromide.

"Spotting of pinholes, etc., on the negative is done with Velox transparent water-colours, and the resulting white spots, as well as any disfiguring light patches on the print, are darkened with pencil; after which the print is steamed. I often resort to a little shading or extra printing, but prefer to do as little after-work on the enlargement as possible."

ALPHUBEL. *Hilda Jordan.*

(A further example of Miss Jordan's work is reproduced on one of the centre Art pages.)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"SORROW AND JOY," *by Dr. T. de Csörgeo.*

ALTHOUGH in arrangement the impression this picture conveys approaches symmetricality, there are slight differences on either side which prevent it from becoming absolute; but, quite apart from these small distinctions, there is justification for the formality of the placing in that the intention is to represent an abstract theme.

That theme is joy and sorrow, the centre figure typifying joy and those on either side the opposite mood. The idea that a symmetrical placing emphasises the mood is based on convention and the traditions of the masters of painting—who, in dealing with subjects of a sacred nature, and, at a later date, with those having an allegorical theme—placed the principal figure in the centre and arranged for the subsidiary elements to assume a descending order of importance on each side of the centre figure. Such a disposition of the material endowed the chief figure with an unquestionable supremacy, but, in conjunction with the equal balance of elements on each side, introduced a feeling of formality, which, it was thought, invested the subject with a seriousness appropriate to its character.

The convention persists, and, as the intention is to present the theme of joy and sorrow rather than to convey an idea of the personalities of the figures, the central placing and approach to equivalence on each side is justified and has the support of tradition.

As a matter of fact, the central position is actually the strongest of any. Its power and force are readily to be seen, both in the original and in the sketch, and it is obvious that the figure (1) provides the centre of interest. The opinion has been expressed that the central position in a picture is inclined to weakness, an assertion which is emphatically disproved in this instance, but it *is* a placing that is unsuitable for the majority of subjects, for, in the first place, the formal suggestion it introduces is foreign to the informal character which the general run of subjects exhibits, and, in the second, it is most unamenable to treatment in that it seems to need a balance of equals, which, besides being almost impossible to find, is usually æsthetically unpleasing.

To take an ordinary landscape as a case in point, it would be practically an impossibility to find a subject that is exactly the same on each side of the vertical centre line, so that if its principal feature were placed in the centre, it would either suggest a formality not in accord with the rest of the scene, nature being almost invariably informal, or the arrangement would seem unbalanced.

There is, as it happens, something of that feeling in this case, for, with (1) in the centre and to carry out the formality of the idea, the figures (2) and (3) should be on precisely the same scale, and similarly posed and placed in the respective sections of the picture space they occupy. (2), however, is on a slightly larger scale; she is separated more from the central figure than (3) and there are further differences in the way the two elements are illumined. There are also differences in the background of sky, but, in connection with the lighting, it is possible that the contention might be advanced that the greater illumination falling on (3) makes up for the greater scale of (2) and restores the balance to symmetry. It does do something in that direction, perhaps, but not altogether, and there is still a very slight suggestion of a lack of balance.

Its only effect is to create the feeling that the original intention of endeavouring to make a symmetrical composition has not been carried through to finality, but it does not affect the successful transmission of the idea indicated by the title. That depends more on the expression in the case of the figure (1) and on the poses of (2) and (3), and, as will doubtless be observed, it is wonderfully well conveyed.

As an incidental, there is, also, a fine effect of sunshine and the open air, and the tone values of white garments in light, blue sky and clouds, are beautifully rendered. The fact is a tribute to the author's command of technique which was very evident.

The print is one of a very attractive series that were shown by the author at the recent exhibition of the London Salon of Photography, all of which were similarly treated, and it illustrates a tendency that was more marked this year than before towards the use of a surface of very high gloss. It has the decided advantage of giving great brilliance and richness to the print, while, at the same time, every distinction of gradation is faithfully reproduced. "MENTOR."

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

WITH a subject of the type of No. 1 of the prints reproduced on the opposite page—"Temple Island," by D. H. Fender—the landscape, although pretty well arranged, is inclined to be featureless and lacking in interest, and it needs something in the nature of an imposing sky to make it pictorially attractive.

The Pictorial Element.

The fact appears to have been appreciated to some extent, for the sky does include a hint of cloud forms, but they are detached and bitty in character and scarcely of a nature to enhance the attractions of the subject.

The sort of sky that is needed is one of sufficient interest to convey an attraction on its own. It should be made up of good shapes and bold masses well arranged, with all their gradations faithfully rendered; it should be luminous and exhibit a proper suggestion of a recession of planes; and it should harmonise or go well with the form of the landscape below. Cloud forms of the type that is in mind are of the cumulus variety, and usually come with a wind varying from west to north, but, when they come, a considerable amount of judgment has to be exercised in choosing the moment for making the exposure, and it will, as well, usually be found desirable for several successive exposures to be made with a view to subsequent selection of the most promising.

It is a good plan, too, to make a number of exposures as the opportunity occurs, with the idea of making a good set of cloud negatives that can be used for double printing with other landscape subjects that, while satisfactory as far as they go, seem to need the addition of a sky to round them off.

Double Printing.

A portion of sky that is free from projecting elements should be chosen, and it is as well if a slight section of the landscape be included at the base, primarily for the reason that it indicates the position of the horizon, and, in order to avoid any appearance of falsity, care should be taken to see that the horizon of the sky negative coincides with the position in which it would be in the landscape whether this be visible or not.

To make use of a sky negative, the relative exposure times of both it and the landscape section are found by experiment, the sky portion being masked during the time the landscape is being exposed and the landscape being covered up during the time the sky is being printed, steps being also taken—either by moving the masks or by keeping them at a sufficient distance during the printing exposure—to prevent any join or gap from becoming apparent.

It is no exaggeration to say that many exhibition prints have been made by this method from material which, in the ordinary way, would have been perfectly useless by itself. It could have been employed in the case of No. 1 with good effect, and, with No. 2, "The Mill—Still Sails," by H. Croft, where the somewhat uneven sky is a drawback, another and more pleasing sky could have been substituted.

Uneven Skies.

The picture, however, seems to have been rather over-printed, and the impression of unevenness seems to arise from the presence of light clouds, which, as was the case with No. 1, are of a detached formation, the over-printing tending towards merging them into the blue.

It is a pity, for the mill seems nicely placed in the picture space, and, in other respects, composes quite well with the remainder of the material.

No. 3, "*Queen Mary* at Rest," by L. D. Moon, shows a sky that can only be characterised as curious. It appears to be very uneven, a feature which may be attributable either to light fog at some stage or other, or to uneven development, and quite spoils any chance of success the print might otherwise have attained. The vessel is shown on a smaller scale than usual, and, on account of the inclusion of the crane in such close proximity, her great size seems dwarfed almost into insignificance.

The opposite is the case with No. 6, "The S.F. *Pearce*," by A. Sandeman, where the boat seems somewhat cramped owing to a lack of space in the setting, the bowsprit seeming to run out of the picture. There is a further unfortunate feature in the obviously incorrect slope of the line where the water meets the distant shore, and it is surprising to find that such a fault was not seen and adjusted before being submitted.

Stance and Viewpoint.

In the case of the remaining two prints, the sky in one is excluded by the adoption of a high viewpoint, and, in the other, it is so screened by the foreground trees that its significance is slight.

No. 4, "The Old Well," by A. E. Bent, shows a well-chosen subject, the effect of glancing sunshine on the porch being a specially attractive feature. The omission of the sky enables it to tell efficiently, but the impression would be considerably improved if the spots of light showing through the foliage towards the top of the print were toned down, preferably by retouching on the print.

A little more foreground, too, would be beneficial, but, having regard to the height of the stance, it seems questionable if a greater viewing distance could have been secured, and, unless it could, an addition to the foreground would scarcely be practicable, i.e., assuming a lens of shorter focal length was unavailable. There is just a possibility that the masking hides a fraction of what is included in the negative, and, if so, it would be as well if it were included when the subject is reprinted.

Subject Possibilities.

"Ready Money Cove" (5), by D. Campbell, is a subject that is by no means badly seen, and one that conveys the impression of having possibilities that have not altogether materialised.

The idea of showing a vista through the screening trees is excellent, but the attention naturally focusses upon the most distant point of the cape and this should be placed so that it would be seen through a gap, wider than the rest, that should be placed somewhere near the centre of the print. This would mean a change of stance towards the right and an alteration in the line of sight towards the left, but whether this is feasible or not could only be determined on the spot.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

EXPOSURE OF BROMIDE AND GASLIGHT PAPERS.

LAST week I drew attention, in a brief way, to the necessity of suiting the printing paper to the negative.

I pointed out that it is quite impossible to produce a negative that will be of the right density and contrast to make it anything like ideal for all the printing processes available.

It follows that we must consider what is the best all-round type of negative to aim at. I say "to aim at," because, with all our care, we shall not always get it. Personally, I think it a mistake deliberately to produce negatives that require a vigorous or contrasty paper to do them justice. My own aim is a negative that will give a good print on normal bromide paper with a condenser enlarger and diffused light. If it will do this it will also be suitable for contact printing or for lantern-slide making.

It is possible to measure very exactly the various degrees of brightness in any subject we may photograph; to do the same with the whole range of opacities in a negative; and the same again with the complete scale of tones in a print from white to black. We may or may not want to show in the print all the tones included in the original subject.

In any case, when we look at a photograph we do not produce an instrument and set to work to measure the tones, and it would not do much good if we did. But it is very evident that there are many photographers who seem quite unable to recognise and appreciate tone values. They make prints which to other observers are altogether false and unpleasant, and in many cases this is due to the choice of an unsuitable paper, or to errors in exposure of a paper quite capable of giving a satisfactory result.

I have made three prints from the same negative on the same kind of paper. The third version is what I want the

subject to look like ; and therefore, for my purpose at any rate, the other two are wrong.

They would be wrong in any case, and for any purpose. In the original of the first print the sky is white paper, not grey as in the reproduction ; and all sorts of necessary tones and details are missing. In the second, the shadow cast by one of the sails is visible, and seeing that the light was sufficiently strong to cause this, the shadow side of the mill could not appear as a solid black mass.

The first print was under-exposed. There must be a certain minimum of light acting on the paper to give the faintest grey tone, and the lightest tones in a print come where the light has had to pass through the densest parts of the negative. These parts allow so little light to pass through that unless it is given sufficient time to act it will have no effect on the paper at all. No lengthening of development will make up for this absence or deficiency of light action. The densest shadows are black, and so no extra exposure could make them blacker ; but what should have been medium greys are too light, and what should have been light greys are missing.

The second print was over-exposed. Many of the dark and medium greys have caught up the blacks, and light greys have become dark greys.

The relative exposures of the three prints were 2, 12 and 5. Fortunately, there is some latitude in exposure. I could have made a print either rather lighter or rather darker as a whole than No. 3, still using the same paper. Something can be done, too, in the direction of increasing the exposure, and then stopping the development before the print became too dark. But only within limits.

It must be borne in mind, once more, that even with development to finality no tones will appear unless there has been sufficient light action to produce them. Therefore it is better to err in the direction of over-exposure, as with a slight curtailment of development quite a satisfactory print will result. This sort of thing must not be overdone, though, or there will be several kinds of trouble.

W. L. F. W.

Exhibitions and Competitions CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in the issue of October 28.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

Eighth International Photographic Salon of Japan.—Open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi, Shimbun, Tokyo, Japan.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Borough of Ealing Public Libraries Photographic Exhibition and Competition.—December 9–10. Open to all residents in the Borough. (M. L. Hodges, Librarian, Hanwell Public Library, London, W.7.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Entries, November 18 ; open, November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Entries, December 15 ; open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20 ; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8 ; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18 ; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23 ; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30 ; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16 ; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Western Eighth Annual Salon of International Photography.—Entries, February 1 ; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

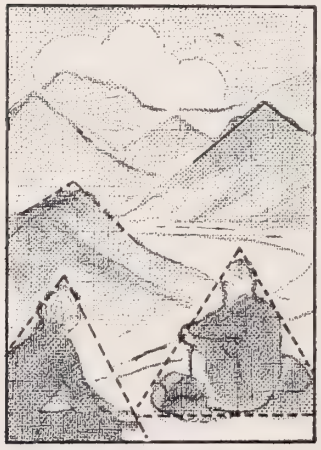
Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6 ; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9 ; exhibits, March 1 ; open, March 3–6. (Walter Selfe, 24, Pembury Road, Clapton, London, E.5.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly Co., Euston Station, London, N.W.1.)

St. Petersburg C.C. Second Annual Pictorial Salon of Photography.—Entries, February 26 ; open, March 3–17. (R. Kendal Williams, 602, Snell Building, St. Petersburg, Florida, U.S.A.)

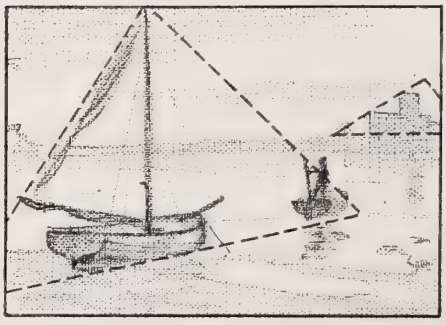
Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1, open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)



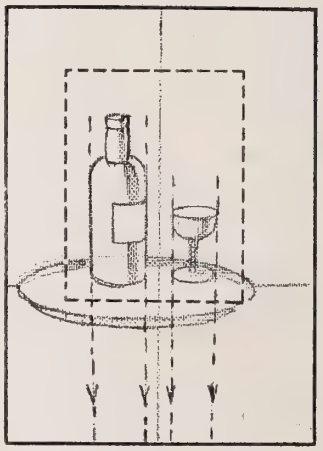
Brighton and Hove C.C. International Exhibition of Pictorial Photography.—Entries, March 15 ; open, April 14–May 1. (E. K. Robins, Little Toll, Isfield, Uckfield, Sussex.)

Picture Points

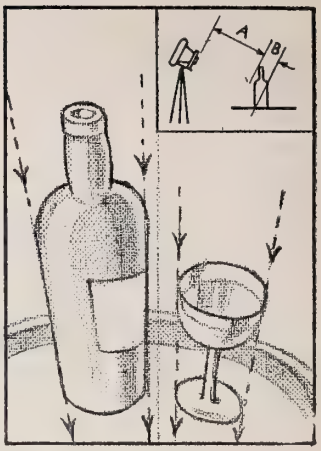
No. 26 (New Series) *by RICARDO*



Triangle Construction.



FOLLOWING up the previous points on the use of the triangle as a constructional device, it is just as well to show the danger of overdoing it and so making it defeat its main object, that of providing unity and stability in the final picture.



In the accompanying sketch it is obvious that the triangle has been repeated much too frequently, although there is a certain amount of variation as far as the distances between them are concerned. The remedy lies in reducing the number of triangles to as few as possible. The two figures should make one on the right-hand side while the remaining triangles in the distance should be reduced or weakened in the *printing*, since a different viewpoint would probably present fresh difficulties.

Another point to bear in mind is that the triangle should, as far as possible, lead into the picture as suggested by the second sketch. Here it will be seen that the principal lines all lead to the main point of interest, the figure in the boat, which in spite of its small size thus becomes the centre of emphasis in the composition.

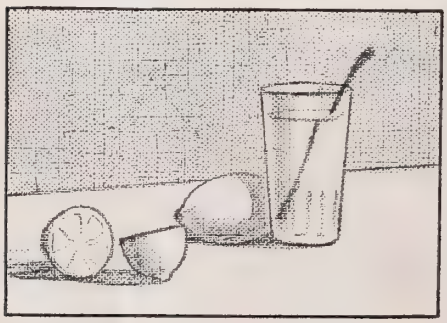
Concerning Perspective.

THE beginner is often puzzled as to why certain objects, particularly in still-life subjects, look strange in their shape on the prints, while others look quite conventional. So much is taken for granted, and that provided the lens is in the centre and at right angles to the plate or film, any picture must be correct for perspective.

Technically, this is correct, but from the pictorial point of view such a representation like that in the top sketch would probably be rejected on the score of "distortion."

Assuming that the vertical centre line is the same with both the camera and the eye, the tendency for the lines to converge or "vanish" as indicated by the dotted lines and arrows is much about the same, but the difference is that the eye sees one very small area at a time, while the camera views the lot at once and can provide sharp definition all over.

If the camera is not fitted with a swing back then the only remedy is to take the camera farther from the subject.



The amount of convergence in the "vertical" lines of the objects is in proportion of the two dimensions A and B. A being the distance between subject and lens and B the distance from the nearest and farthest plane in the object. The greater the proportion the less will be the converging angle of the "vertical" lines. But as A is increased so does the image become smaller; the portion that matters (as indicated in the second sketch) can then be suitably enlarged.

Experiments in Grouping.

WHAT is wrong with the sketch below? Regular readers of this series will no doubt recognise a few outstanding faults, but the practice of grouping has not yet been touched upon.

The major fault is that the arrangement of the lemons is weak because they are in a line and badly connected, and do not form a pleasing, substantial group, like that in the second sketch. Following this, the positions of the half-lemons are not suggestive of the solidity of each. The one on the extreme left is facing end on, while the next is an exact side view, and it is left to the imagination what they should represent. Compare these two with those in the improved arrangement and notice how they are placed and how the eye tends to follow the two cut faces, beginning from the left and travelling towards the right *round* the glass and back again. Whereas, with the first arrangement the interest wavers between left and right.

The hard line between background and base has been removed by allowing the base covering to be the background as well and *curving* upwards and so avoiding the sharp angle which tends to divide the picture. This method is always a safe one to adopt in dealing with still-life subjects—a roll of neutral coloured mounting paper can be used for the purpose. A variety of effects can be obtained with it by adjusting the lighting on the portion forming the background.

In the second sketch the line has also been altered with regard to direction. It does not follow the principal direction of the group but goes upward instead. This helps to balance the subject as well as to hold the interest in the group.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Isle of Man Publicity Board is to be congratulated on the success of its photographic competition for pictures taken by visitors to the island during the holiday months. Over 5,000 photographs were sent in, many being of high pictorial merit. Cash prizes amounting to £250 were awarded, and the popularity of the Isle of Man as a holiday resort was amply demonstrated by the fact that the prizes were distributed to all parts of the country.

A remarkable film record of the Mount Everest Expedition, 1936, was shown at a private view held at Kodak House, Kingsway, on November 10th. Mr. Frank Smythe, the well-known mountaineer and member of three Everest Expeditions, was responsible for the shooting of the film, and was himself present at this demonstration to provide a running commentary to the story told on the screen. The slow progress of the Expedition across India and the Tibetan Plateau to the foot of the great mountain was vividly related both in black-and-white ciné shots and in full colour. Mr. Smythe explained that he had used only Kodak film materials and cameras, and that he had been especially pleased with the results achieved by the many thousands of feet of Kodachrome colour film which he took with him, and with which he made shots at over 20,000 feet.

The winner of last week's Wallace Heaton Competition is Mr. W. Arnold, The Manor House, Tonbridge, Kent, to whom an award of one guinea has been sent. Particulars of this Competition will be found in our advertisement pages this week.

The 41st Annual Exhibition of the South London Photographic Society will be held in the South London Art Gallery, Peckham Road, London, S.E.15, from 13th February to 13th March, 1937. The closing date for entries is 18th January, 1937. There is to be one class only, but prints of any subject are eligible. Entrance fee, 1s. per print. A silver medal, a bronze medal and certificates of merit will be at the disposal of the Judge. In addition, Mr. Ramsay Macdonald will present a special medal to be awarded for the print best expressing the beauty of the English countryside. Further details and entry forms can be had from the Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, London, S.W.9.

We have received a copy of "Photography," by C. E. K. Mees, published by Messrs. G. Bell & Sons, Ltd., at 7s. 6d. It is a book of outstanding interest and value, exemplifying the rare combination of learning and lucidity we have learned to expect from Dr. Mees. It is not a practical manual on photography; there is not a formula in it; but it presents a vivid panorama of photography from its earliest inception to the wonderful achievements of the present day. We are taken behind the scenes, as it were, and shown how things are done in the laboratory, the factory, the dark-room, and the studio. Particularly valuable are the chapters on cinematography and colour processes. The volume is lavishly illustrated by diagrams, and plates in monochrome and colour, and is emphatically a book to buy, to study and to enjoy.

We have been asked to announce that the price quoted for Bauchet Lantern Plates, 1s. 4d. per dozen, in our Special "Ciné and Lantern Number," is the net trade and professional price. Messrs. Actina Ltd., wholesale agents for Bauchet products, do not issue a list for the amateur trade. The retail cost of such plates should be 2s.

Mr. R. G. Lewis, the Miniature Camera Specialist, of 202, High Holborn, London, W.C.1, has just issued a booklet describing and illustrating all the enlargers at present on the market for use with miniature negatives. This useful publication, which will be sent post free on application to Mr. Lewis, should prove very helpful to all those readers desirous of acquiring a miniature enlarger, as it will enable them to compare prices and performance of each model on the British market. Prices range from £4 10s. to £50 12s. 6d., so that every purse is catered for. As the supply of these booklets is limited, early application should be made.

[Photo: F. A. Swaine Ltd.

Members and guests of The Photographic Dealers' Association. Photograph taken at the annual dinner at the Park Lane Hotel, London, referred to in last week's "A.P." The negative was made with 2 secs. exposure by the ordinary light of the room.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

D. AND P. WORK.

SIR,—Your correspondent Mr. G. H. Smith asks for opinions on the average D. and P. service in this country, and at the same time compares it very unfavourably with that given abroad.

While I have had no experience of foreign work, I have seen a good deal of work turned out at home and think that on the whole he is quite correct in saying that the general standard is poor. There are, however, exceptions, and he may have been unlucky. This year, for the first time since I started photography, I found that I was unable to do my own D. and P. and therefore had to depend on the trade. I must admit that I had some decided misgivings as to the results I should get. At the time in question I was staying at a well-known holiday resort.

At the first shop, which had the largest display of cameras and accessories, the results were awful. Principally through over-development and the use of paper of incorrect contrast. The next shop, only a little less high-class, was just as bad.

The third shop (which was the local " Boots ") gave first-class work. They were doing it themselves in the town and were really giving the best D. and P. I have seen. I had about a dozen films (Selochrome) done by them and every one was " tip-top," with nicely graded prints free from thumb-prints, etc. They told me that they used six grades of paper to cope with variations in contrast.

There are other people doing good work, of course, but they have got to be ferreted out. Unfortunately they do seem " few and far between."

Needless to say, I have no interest whatever in Messrs. Boots, except that I always think good work is worth recommending.—Yours, etc., N. GILES.

SIR,—In reply to Mr. G. H. Smith's letter complaining of the bad D. and P. service in this country, I agree that the work turned out by the average trade organisations would give offence to any person able to appreciate photographic art and technique.

When photography first became a popular hobby the most logical person to handle D. and P. (namely, the professional photographer) very narrow-mindedly turned down this branch of his work, and so it was taken up by chemists and camera makers and dealers. The live professional of to-day, however, has seen the folly of his predecessors, and includes D. and P. in his sphere of activities. After all, isn't it logical to take your photographic work to a photographer? Who would dream of having his shoes repaired by a greengrocer?

The great bulk of D. and P. customers to-day, unfortunately, appear to like what Mr. G. H. Smith describes as " soot and whitewash," so the poor minority of careful, enthusiastic picture-makers have to suffer.—Yours, etc., R. M. BARR.

SIR,—May we give our opinion on the average D. and P. service in this country, in answer to Mr. Smith's invitation?

In our opinion, the larger the firm the more unreliable the result. It is not merely a case of under- or over-developing negatives or of printing them on unsuitable paper, but of carelessness. Prints and negatives are scratched or marked. The wrong number of prints is made on a different surfaced paper from that ordered. Instructions about masking are disregarded. These evils are much more frequent in summer than in winter. During last summer we tried nearly every large D. and P. service in London and found them all more or less bad. At this time of year, however, these gross faults are less common. But Mr. Smith's complaint remains valid all the year round.

We think that the only satisfactory D. and P. service is that of the small man who does not send his work away to be done by a big firm—if you can find him. We, however, have bought the necessary outfit, fixed up a joint dark-room and decided to be quit of D. and P. services for ever.—Yours, etc.,
PETER HUTTON. CHRISTOPHER COLE.

SIR,—As proprietor of a D. and P. works doing a fair amount of trade work I was very hurt to read the letter from G. H. Smith, comparing English D. and P. with Continental.

My experience is just the reverse; I have quite a large number of customers who would not dream of having their D. and P. done whilst abroad, preferring to make sure of their results by bringing them all back to be processed at my works.—Yours, etc., P. HEATHCOTE.

FINE-GRAIN AND OTHER DEVELOPERS.

SIR,—May I be permitted through your columns to pass on a recent experience?

I was developing some rolls of film and using one of the newer ultra-fine-grain developers, of which it is advertised " *It may be used repeatedly*," or words to that effect. I was using about one-third of the total quantity of 20 oz., and the first roll was satisfactory. The second roll developed in the same dish of developer showed only the mere ghost of an image on each exposure—trouble—developer exhausted. Consequently I lost a dozen good negatives. Being pan. and developing in total darkness I was only aware of this after emerging from the dark-room.

Now why do not manufacturers clearly state what film area a certain quantity of their products will satisfactorily develop, instead of using such ambiguous terms as they do, and give both the user and their products a reasonable chance?

Some manufacturers know and they will tell you if you write and ask for it.

Photographic manufacturers seem extremely reluctant to say anything intelligent concerning the performance of their products. I wonder why?—Yours, etc.,
H G. BARNETT.

THE IDEAL CAMERA.

SIR,—There has been much talk in these columns as to what is the ideal camera on the market at the present day.

In order to try and find an answer to this question, I looked to see what cameras the authors of " How I Make my Exhibition Pictures " used, and examined twenty back numbers of " The A.P."

Out of twenty persons, twelve used reflexes—either Rolleiflexes or $3\frac{1}{2} \times 2\frac{1}{2}$ or $\frac{1}{4}$-plate. This works out at 60 per cent.

The other 40 per cent used cameras ranging from a Contax II to a $\frac{1}{2}$-plate studio camera—but they did not all use *one type* of camera.

Surely this speaks for itself?—Yours, etc., G. F. WOOD.

MINIATURE FILMS.

SIR,—Mr. R. J. Hoblyn is not the first to ask that 12-exposure films for the Leica, in cassettes, should be put on the market. If they were, I do not think he would buy them, on account of the necessity of charging rather a high price for them.

A 36-exposure film in cassette ready for loading into the camera, and packed in the usual way in a neat aluminium box, costs 3s. 6d. The same film cut to length, trimmed at the ends, wrapped in black paper, and packed in the same aluminium box, costs 2s. Since everything else (except the black paper) is the same, one assumes 1s. 6d. as the charge for the cassette itself.

It seems reasonable to guess that of the 2s. remaining at the very least 6d. is charged for cutting, trimming, wrapping and for the aforesaid box, leaving at the outside 1s. 6d. as the cost of the film itself. The length of the strip is 1.64 metres, of which 270 mm. is allowed for wastage at the ends. A strip long enough for 12 frames, plus the same 270 mm. at the ends, would be 730 mm. long; this, at the rate of 1,640 mm. for 1s. 6d., would cost 8d. Adding to this the costs of 6d. for cutting, trimming and boxing, and a further 1s. 6d. for the cassette, brings us to the conclusion that a 12-exposure film in cassette would have to sell at 2s. 8d. This is about 2.7d. per exposure, as against 1.2d. per exposure in the 36-exposure cassettes; more than double the price per frame.

Unless manufacturers are overcharging us scandalously at the present prices, they could not get anywhere near the prices suggested by Mr. Hoblyn in his letter.

Perhaps I am wrong, and Mr. Hoblyn really would buy short films at that price—but I'm jolly well sure I shouldn't.—Yours, etc., A. L. M. SOWERBY.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Titling

By F. R. UNDY.

THE ambitious ciné worker should seize upon the darker evenings of winter as an opportunity to make progress with his titling, for this, happily, is a branch of the hobby which can be carried on at full swing with artificial light.

To appreciate how really important titles are, one has only to remember for a moment that every film must have a main and introductory titles, and there are very few films indeed which can be shown successfully without some further subsidiary captions, to provide little explanatory notes and snatches of dialogue, to make the picture perfectly clear to the audience. By careful titling awkward gaps can be bridged, so that it is often possible to blend together a miscellaneous selection of shots, taken over a period of several months, into a smooth, continuous picture of the general interest type.

The first step towards the preparation of successful titles is the acquisition of a titling outfit. Described briefly, this is a sort of small bench on which the title can be set up at one end with the camera directly in line at the other, with one, or, better still, two, ordinary electric lamps situated to throw an even illumination upon the title.

The titles themselves may be written or typed on cards and mounted in position. For more professional results, however, founts of neat white letters are supplied, and they will adhere quite firmly to the special black surface of the title board at a touch. Preference is shown, it will be noted, for white lettering upon a black or dark ground, and there is an object in this—the reason is that a blank expanse of white repeatedly flashed upon the screen is inclined to be tiring to the eyes.

Efficient titling outfits may be obtained for as little as two guineas, though the amateur who is willing to go to four times this figure could set himself up with a really magnificent apparatus. The actual choice depends, naturally, on the amount one wishes to spend, and for those with limited means it is interesting to mention that I know amateurs who have made their initial attempts at titling with blackboard and chalk, and similar simple contrivances.

At this point just a word or two must be said regarding the titles themselves. They should all be planned during the editing stage, being written out on paper so that the work of filming them can go ahead with the minimum of delay. The important point to be borne in mind is that the audience wishes to see pictures on the screen, so that titles should be brought in as sparingly as possible, ingenuity being exercised to cover a number of scenes with one. Where spoken titles are introduced the usual method is to splice the wording in just before the speaker's lips cease moving.

One suggestion which may be added here is that titles should harmonise with the picture itself. By this it is meant that in a brisk film—say, snapshots on a seaside pleasure-ground—short, snappy captions would be suitable. In a quiet, more serious type of film, on the other hand—travels in Shakespeare-land, for instance—longer reading would be more in keeping with the general atmosphere.

The main essentials of a satisfactory title are that it should be nicely centred on the screen, it should be focussed and exposed correctly, and it should run for just the right length of time.

If you have purchased a titler designed specially for your particular make of camera, or if you use one of the more expensive models adaptable to almost every make, then the matter of centring will present no difficulty, as there will be a device to ensure accuracy in this direction. In some cases, however—including home-made articles—it will be necessary to experiment a little in order to ascertain exactly what area of the title board is covered by the camera.

A practicable plan would be to rule vertical and horizontal lines—say half an inch apart—across a title card, number the lines so that they may be distinguished, then centre the camera as accurately as possible with the view-finder, and expose a short strip of film. When this is projected it will be possible to pick out the exact area in which the lettering must be set up. It must be remembered, of course, to mark the position of both camera and title board.

As regards focussing and exposure, accuracy in the former will be secured by measuring from lens to title and adjusting the lens mount accordingly, or attaching a portrait lens if necessary. With most titling outfits suggestions as

Mist, combined with brighter light than is found in the streets, suggest the riverside for winter filming. The lunch-hour meeting might well be made one episode in a film of "The Daily Round" of the city worker.

to exposure are given, taking into account the stop, strength of light, type of film, etc. Here again, however, much can be learned by actual experiment, and a start in this direction could be made with a pair of 100 or 60 watt lamps and ordinary pan. material, exposing just a foot or so of film at various stops.

It is worth remembering, by the way, that just the same results can be obtained if the camera is run at half speed for title work. This permits of a smaller stop being used—improving definition—with only a moderate amount of illumination.

And now we come to the timing of the title so that it will remain on the screen for just the right length of time. This is a detail of great importance, for it is easy to realise how dissatisfied an audience would feel at the end of a picture in which the reading flashed on and off the screen before it could be properly grasped, or remained, on the other hand, for many weary seconds after it had been thoroughly perused, or if the film contained an unhappy mixture of the two.

One good plan is to start the camera, read the title aloud, pronouncing each word distinctly, then stop it immediately. Another method is to allow half a second for each word, with a minimum of four seconds, and a further half-second for each unusual or particularly long word. These suggestions apply when the film is running at the normal sixteen frames per second; where the half-speed plan mentioned above is adopted it must be remembered to double the running time. It is perhaps safer to err on the side of length, for it can—and should—always be clipped down if it does not meet with complete satisfaction when it comes to its final test on the screen.

Lastly, it must be said that the whole of such a big subject as titling cannot by any means be covered in a single article. From the foregoing, however, the beginner will at least have gained an inkling of the business and will be able to get a start on the right lines. Let the simple—yet ever reliable—plain white title upon a black background be thoroughly mastered first, and the amateur can then begin to think seriously of bigger achievements—moving titles, scenic backgrounds, and so on.

Tinting the Film Base for Distinctive Projection

By RICHARD B. WILLCOCK.

ONE of the many devices employed by professional film producers to vary the monotony of long monochrome productions is the subtle changing of the tint of the film base as one sequence changes to another. The object, of course, is to soften the screen glare which results from a combination of high-intensity arc brilliance, and the apparent high-key effect suggested by modern emulsions with long tonal scale.

Screen glare, however, is seldom present during the projection of sub-standard films, but there always exists a trace of yellowness from the peculiar type of lamp used, which in its own way is as monotonous as the "whiteness" of the standard carbon arc lamp. Any means, therefore, of frequently changing the tint of the light source doubtless adds refinement to any amateur production.

Users of Ilford sub-standard negative stock will have noticed that the recent positive copies from these are printed on mauve-tinted film, which is a step in the right direction, since it adds a professional quality to projection. Even so, some degree of monotony persists, hence the writer's experiments to improve matters.

Whilst there are on the market devices to effect colour-change independent of the film, the tinting of the film base is preferred, since once a scheme is carefully thought out the desired effect remains constant.

Any transparent water dye may be used, provided the colour does not crystallize, bloom, or streak. Most liquid tints available for photographic use are of synthetic origin, notably Cinecraft, Johnson's and Webster's "Diamine" colours. For no other reason than they were handy and cheap, the writer has for some time used Kodak colour stamps, which are admirable in every way.

The only precaution is to tint, not colour, the object being to control the natural quality of the light source. Carefully note a professional production, and appreciate the subtle change. First pink, then mauve. A short length of untinted film, then almost unnoticeably back to pink and mauve, with perhaps an interval of yellow or blue. Few people notice it until told. For pink, a mixture of Kodak scarlet and light blue, with only a trace of the latter, or, better still, Cinecraft cerise, a beautiful colour if used diluted. Violet, either alone or mixed with blue, supplies a mauve, whilst either yellow or orange provide a warmth following a cold tint.

First mix the colours selected, and dilute, trying their strength on a piece of discarded film, which may be then projected. Making sure that the colours are not too strong, and are in sufficient quantity, prepare the film for tinting. This may be done in short lengths before editing, or more laboriously afterwards. Short lengths may be drawing-pinned through their perforations, at each end, on to heavy wooden blocks, thus keeping them stretched and from touching the work-bench.

Damp the emulsion side with a water-soaked wad of cotton-wool, following up with the colour applied with a No. 6 camel-hair brush or mop. Blending from one tint to another in one length is less difficult than tinting a bromide print, and is done by bringing the two tints together, and "laying off" with clean water on the brush. Examine each length for tear-marks on the celluloid side, which should be carefully wiped with clean rag.

Titles should be treated in the same way as sequences, though the tint may be a shade stronger.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d., post free.

50. COLOURS ON GASLIGHT LANTERN PLATES

ALTHOUGH a considerable range of colours can be obtained on lantern slides by the usual methods of toning, a variety of tones from warm black to red are to be secured on the "gaslight" variety of lantern plates by variations of exposure and development. These plates can be handled in subdued artificial light in the same manner as gaslight paper, but must be protected from direct rays of light except when exposing.

The following developer is recommended:—

(A) METOL-HYDROQUINONE.

Hot water	20 oz.
Metol	20 grs.
Sodium sulphite (cryst.)	200 grs.
Sodium carbonate (cryst.)	800 grs.
Hydroquinone	20 grs.
Potassium bromide	20 grs.

The ingredients must be dissolved in the order given.

(B) RESTRAINER.

Ammonium carbonate	1 oz.
Ammonium bromide	1 oz.
Water	10 oz.

Using this developer at 65° Fahr. without the addition of (B), the exposure for contact printing at 12 in. from 30-c.p. electric light with an average negative will be about two minutes. If magnesium ribbon is used, half an inch burnt at about 18 in. from the negative will be about correct.

The tone obtained will be a fine blue-black.

For warm tones the exposure must be considerably increased, and the restrainer (B) added in the proportions indicated in the table given below. The longer the exposure and the more restrained the developer, the longer will be the time of development, and the warmer the tone of the finished slide.

Colour.	Exposure.	Developer.	Approximate time of development at 65° Fahr.
Black	Normal	(A) 1 oz.	—
Warm Black	Normal × 1½	(A) 1 oz., (B) 1 drm.	30 secs.
Brown	Normal × 2	(A) 1 oz., (B) 2 drm.	40 secs.
Warm Sepia	Normal × 3	(A) 1 oz., (B) 3½ drm.	50 secs.
Purple	Normal × 4	(A) 1 oz., (B) 4 drm.	60 secs.
Red	Normal × 6	(A) 1 oz., (B) 5 drm.	70 secs.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, November 18th.

Battersea Men's Inst. C.C. Lecturettes—"When we Started in Photography."
Bethnal Green C.C. Photographic Alliance Competition Prints, 1936.
Birkenhead P.A. Lantern-Slide Making—Demonstration.
Birmingham P.S. (Ciné Sec.). Holiday Film Competition.
Borough Polytechnic P.S. Third Slide Competition, 1936.
Brighton and Hove C.C. "Through Denmark into Sweden." K. Baker.
Bristol P.S. "Roderick J. Fry" Straight Photography Competition.
Cheltenham C.C. Beginners' Meeting.
Chorley P.S. "The Changing Countryside." F. Sellers.
Coventry P.C. Some Pictures and How they were Produced.
Croydon C.C. "A Naturalist on the Amazon." E. A. Robins.
Dennistoun C.C. "The Development of Ciné Films." D. Phip.
Ealing P.S. Second Pictorial Competition and Criticism.
Edinburgh P.S. "The Print and Enlargement." J. G. W. Thomson.
G.E. Mechanics' Inst. P.S. "After-Work on the Print." W. E. Ginger.
Hall Green P.S. "Indoor Portraiture." H. S. Rowley.
Hinckley and D.P.S. Federation Prints and Slides.
L.M.S. (London) P.S. "Miniature Cameras." R. M. Fanstone.
London School of Hygiene P.S. "Enlarging." A. H. Durrant.
Luton and D.C.C. Members' Evening.
Northallerton and D.P. and C.S. "Carbro and Carbon." T. Ambler.
Partick C.C. Visit to Messrs. Photo Finishers, Ltd.
Phœnix C.C. Members' Night.
Shropshire C.C. "Colour Filters." Messrs. Ilford Ltd.
South Essex C.C. Members' Night.
S. Suburban and Catford P.S. Colour Evening.
Worcestershire C.C. "Dufaycolor." W. Hodson.
York P.S. "Pictorial Work with Modern Roll Films." S. Whiteley.

Thursday, November 19th.

Accrington C.C. "Around France with Car and Camera." J. C. O. Dickson.
Armley and Wortley P.S. "Bromoil." W. Morris.
Aston P.S. Members' Lantern Night.
Bath P.S. "Southern Spain." (Lantern Lecture). Madame A. Emonet.
Bayswater and Paddington P.S. "Intensification and Reduction." F. D. Osborn.
Bolton C.C. "From Stokesay to Chepstow." Travis Burton.
Brighouse C.C. "Combination Printing." A. Barraclough.
Bury P.S. L. and C.P.U. Slides.
Camberwell C.C. Jumble Sale.
Camping Club. "Seeing Britain with Camera and Caravan." B. Hutchings.
Cardiff C.C. "Chloro-Bromide." Chas. Morris.
Coatbridge Co-op. C.C. "Lantern-Slide Making." R. L. Collins.
Derby Rly. Inst. P.S. "Some Masterpieces of Photography." Dudley Johnston.
Gateshead and D.C.C. "Miniature Negative Photography." Messrs. E. Leitz.
Greenock C.C. Exhibition of S.P.F. Portfolio Prints.
Hampshire House P.S. "The L.N.E.R. Posters." W. Giles.
Hull P.S. Y.P.U. Pictorial Prints (1936).
Ipswich and D.P.S. "Plates and Films in Relation to Pictorial Photography."
Keighley and D.P.A. "Over the Hills near Huddersfield." J. Hadfield.
Kinning Park Co-op. C.C. "Lantern-Slide Making in Dark Rooms." D. M'Donald.
Letchworth C.C. Short Tales and Exhibits by Members.
Liverpool A.P.A. "Uses and Vagaries of Colour in Plants." Col. C. T. Green.
Loughborough P.S. "Plate Development of an Unknown Subject."
Newcastle and D.A.C.A. Films by Burnley Film Productions.
N. Middlesex P.S. "Modern Methods of Indoor Portraiture." S. Schofield.
Oldham Equitable P.S. Committee Meeting.
Padiham and D.P.S. "Some Sidelights on Commercial Photography." J. Brunton.
Singer C.C. "After-Treatment of Negatives." J. Wrigley.
Stourbridge Inst. P.S. Competition—Optical Subject.
Stretford C.C. "Amateur Photographer" Prize Slides for 1935.
Sunderland P.A. Postal Camera Club Slides.
Urmston and D.P.S. "Amateur Photographer" Prize Slides.
Watford C.C. "Much Ado about Nothing." G. H. Dannatt.
Wimbledon C.C. Development. Three Members.
Woolwich P.S. "Whipsnade Zoo and C.A. Outing, 1936." H. E. Isard.

Friday, November 20th.

Royal Photographic Society. "A Few Lamps and a Doll." A. C. Banfield.
Bethnal Green C.C. "Materials—What to Use, and Why."
Colne C.C. "Switzerland," and other Films. E. S. Maynard.
Dartmouth Lit. S. (Photo. Sec.). Enlarging Evening.
Harrogate P.S. "Kodachrome." S. T. Ternouth.
Leigh Lit. S. "Still Life by Artificial Light." H. Kitchen.
Photomicrographic S. Members' Evening.
Photographic Society of Ireland. Gaslight and Bromide Printing—Demonstration.
Southend-on-Sea and D.P.S. "The Choice of a Lens." J. Ainger Hall.
Walkden and D.P.S. "Holidays with a Camera in Belgium." H. Riley.
Wimbledon Ciné C. "Scenario Writing." A. Vesselo.

Saturday, November 21st.

Ashton-under-Lyne P.S. Opening of Annual Exhibition.
Hampshire House P.S. Criticism of Members' Competition. D. C. Rowlett.
Northamptonshire N.H.S. Ramble—Billing Turn to Overstone.

Sunday, November 22nd.

Todmorden P.S. "Majorca," and other Films. W. P. Brotherton.

Monday, November 23rd.

Ashington and Hirst P.C. "Ilford Dufaycolor." S. Baxter.
Aston P.S. "Press Photography—Behind the Scenes." H. G. Crabtree.
Bexley Heath P.S. Lecturettes by Members of Gravesend and D.P.S.

Monday, November 23rd (*contd.*).

Blackburn and D.P.S. "A Motor Cycle Trip to Land's End." F. Sellers.
Blackpool and Fylde P.S. "Lantern-Slide Making." J. Sutcliffe.
Bournemouth C.C. Annual Lantern Slide Competition.
Bradford P.S. Slide Night. Critic—C. E. Lawson.
Brighton and Hove C.C. Beginners' Evening—3. Bromide Printing.
Camera Club (Leica Section). "Processing the Leica Film." Messrs. E. Leitz.
City of London and Cripplegate P.S. First Print Competition.
Darlington C.C. Portfolio. A. C. Banfield.
Dewsbury P.S. "Oil Reinforcement—Chloro-Bromides." J. C. Cox.
Edinburgh P.S. Last day for receiving prints for Members' Exhibition.
Erdington and D.P.S. Alliance Competition Slides, 1936.
Finchley A. Ciné S. Lecture on Dufaycolor. G. H. Sewell
Glasgow and W. of S.P.A. S.P.F. Portfolio.
Kidderminster and D.P.S. "Lantern-Slide Making." J. O. Wilkes.
Kingston C.C. Rolleicord Prize Slides.
Lancaster P.S. 1936 Exhibition Slides.
L.C.C. Staff C.C. "Chloro-Bromide Printing." B. L. Twinn.
Leeds C.C. "Highways and Byways in Yorkshire." J. Kaye.
Liverpool A.P.A. "Enlarging." H. R. Buckmaster.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Methods of Focussing.

I am considering the purchase of an expensive camera in which focussing is effected by rotation of the front cell of the lens. I would like to know what disadvantages there are in this method of focussing, as I have heard it stated that the system is not so good as that of moving the lens bodily. G. O. K. (London.)

The method of focussing by altering the separation of the lens elements is very commonly employed nowadays. Moreover, it is not used except with lenses deliberately designed to permit of focussing in this way without loss of definition. You may quite certainly assume that a method of focussing sponsored by the very eminent lens-makers you mention is above reproach.

Depth at Large Aperture.

The following is an extract from an advertisement for a studio reflex camera. "The modern large-aperture lens can only be successfully used without stopping down with the aid of swing and tilt actions." Can you explain the relationship between a large aperture and the swing and tilt action? A. L. H. (Ewell.)

The question you give is not very clear apart from the context. Presumably it refers to the fact that it is often possible to improve the definition on different planes by swinging either the back of the camera or the lens panel. An example of its use is that of a full-length seated figure, where the feet are nearer the camera than the head.

Reversal.

Of four exposures made on the same day three developed to give normal negatives, but the fourth developed up as a positive. I enclose a print which is, of course, a negative. Is there anything I can do to obtain normal positive prints? R. A. (King's Lynn.)

The most common cause of reversal is exposing the negative to actinic light during development. In the case you send, reversal seems to be unusually complete, and you might try making a contact exposure on another plate and see what sort of a negative you get.

Blue-Black Tones on Bromide Paper.

I have always made my prints on gaslight paper because I like the intense blue-black colour better than the slightly different shade of black obtained on bromide paper. But I cannot use gaslight paper for enlarging; is there any means by which I can get a similar blue-black on bromide paper? C. V. S. (Manchester.)

We ourselves have always been satisfied with the black obtainable on bromide paper of good quality, and it occurs to us that perhaps your familiarity with gaslight paper has led you to under-estimate the length of time required for development of a bromide print. Try making a test-strip of varied exposures, and develop it for four or five minutes, irrespective of whether it goes too dark. Use the maker's amidol developer if possible; or, if you object to stained finger-nails, then his M.Q. formula. If you are still not satisfied with the colour, try reducing the amount of potassium bromide in the developer until you reach the limit set by degraded (slightly fogged) high-lights. The less bromide in the developer, the bluer the black. If you still cannot get the colour you want, you might like to try the following metol-adurol developer which has been recommended for blue-black tones on bromide paper. Dissolve 50 grs. metol and 175 grs. adurol in 17 oz. of water. Add slowly sodium sulphite (cryst.) 3 oz., potass. carbonate 2 oz., potass. bromide 9 grs. Filter. This gives a stock solution; for use dilute ½ oz. with water to 4 oz.

Taking Portraits.

I have a —— camera with f/2.9 lens, focussing to 5 ft., and wish to purchase a suitable portrait attachment which would enable me to take good portraits at distances down to 2½ or 3 ft. Where, and at what price, can I get such an attachment? A. C. (Weymouth.)

We cannot quite understand what it is you expect to do with a portrait lens that you cannot do with the present one. In a general way you cannot take good portraits at all at such close distances as you name. You will get all sorts of ridiculous exaggerations. We should say that about 6 ft. is the shortest distance that you could have the lens from the sitter, and 9 or 10 ft. would be safer and better. But a spectacle lens, chosen by reference to "Facts and Formulæ" No. 27, can be had cheaply from any optician.

A Filter Query.

During the summer I have been using a deep yellow filter, but I assume that this would be unsuitable for winter work except during the midday hours. As most of my work is done in the afternoon should I get the same results by using a green filter? If so, of what density? R. A. P. (Nottingham.)

We do not see any reason for changing over to a green filter. In our opinion, your best plan will be still to use a yellow one, but of a lighter tint. We should recommend one that, with the film you use, would not increase the exposure by more than two times. But we would remind you that from the point of view of colour-rendering a deep filter is more essential in winter than in summer. You will possibly be most completely satisfied by keeping to your present filter and arranging for the necessarily longer exposures, or, if you have been using orthochromatic film, by changing to panchromatic film with which the multiplying factor of your filter should be very much less.

Making a Lens Hood.

I wish to construct a lens hood of the tubular metal type, having an internal diameter of 2⅜ in. to fit the lens mount and having a rectangular opening at the other end. The lens is of 6½-in. focus, used on a quarter-plate camera. Can you tell me how long the hood should be and what sized rectangular opening it should have? S. M. (Bristol.)

It is not of much use relying on measurements, because the length required for the hood depends quite considerably on the internal structure of the lens. The only safe way is to make a preliminary hood with cardboard and paper, and find the length and size of the aperture by observation on the focussing screen. In making these tests you must see the effect of raising the front as far as it will go, if such a movement is fitted. You must also note the effect of smaller stops, as this also has an effect on the working of the hood. The only definite information it is possible to give is that the opening should have the proportions of a quarter-plate, and that a fairly large aperture some way from the lens will be better than a small one placed nearer.

MAKE MONEY *with your camera*

We want all types of interesting Photographs from everywhere for publication in thousands of newspapers, magazines, etc., all over the world.

Here is a wonderful opportunity for YOU to "cash in" with your camera! Any ordinary camera will do. No particular experience or ability is required to commence this NEW profitable profession in **YOUR SPARE OR FULL TIME.**

It is an occupation with permanent MONEY-MAKING possibilities **FOR YOU.**

PERMANENT MARKETING SERVICE FOR YOUR PICTURES

We offer you the unique facilities of our Special Marketing Department *—in accordance with our Marketing Agreement.*

By the J. P. D. "Personalised" Method you will be shown every branch of the profession—from the actual taking, developing and printing of saleable photographs—to advice as to the requirements of editors of newspapers, magazines, periodicals, photographic agencies, advertising companies and other commercial firms.

Also, under our supervision and guidance, successes in prize competitions—regularly conducted by numerous journals—await your best efforts.

CONVERT A FASCINATING HOBBY INTO A WELL-PAID PROFESSION IDEALLY SUITED FOR BOTH MEN AND WOMEN.

You will enjoy the work, it is intensely interesting. You can devote just as much or as little time to it as you wish—we want indoor as well as outdoor pictures taken in rain, fog and snow as well as in sunshine—by day or night, in winter and summer—in city, town, seaside or country, on every day of the year. All suitable photographs are personally submitted to the best markets and highest prices obtained.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

FLIGHT The AIRCRAFT ENGINEER AND AIRSHIPS

The First Aero Weekly in the World

All the latest developments in connection with aviation are recorded in the pages of "Flight."

Illustrated descriptions of new aircraft, aero engines and equipment, British and Foreign, appear regularly, as well as practical articles giving the latest information for Club members and amateur pilots.

"Flight" is the leading authority on aviation. It contains Royal Air Force news, and deals with the work of R.A.F. Squadrons, with Private Flying, and with Commercial Aviation, Airlines, and Airports.

A special staff of highly competent aerial photographers ensures that "Flight" contains the finest photographs of aviation in all its aspects.

EVERY THURSDAY 6d.

From all Newsagents and Bookstalls.

"THE WIRELESS WORLD"
COVERS EVERY WIRELESS INTEREST.
EVERY FRIDAY 4d.

CINÉ SCREENS

These screens are made from heavy quality silver cloth, with highly reflective non-directional surface. They are mounted on hard wood varnished rollers, and the two larger sizes are fitted with adjustable stretchers.

NEW GOLD SCREEN

This is a revolutionary departure giving greater brilliance and depth to the picture. It is also more restful to the eye, and experts are agreed that it gives a more pleasing effect. Supplied in the same sizes and styles as our standard silver screens.

		Silver.	Gold.

K.W. MASKING FRAME

For VERTICAL ENLARGERS

The K.W. Masking Frame is suitable for all self-focussing enlargers. Notches in the masking strips allow of instant setting to the standard sizes of prints. The solid build and wide bearings of all moving parts ensures regular "squareness" of the enlargements with equal white margins.

LATEST FREE CATALOGUES!!

We have a special list to fill each of your photographic or ciné needs. Any will be sent on receipt of 2d. stamp to cover postage.

Ask the next man you meet . . .

Ask the next man you meet who are the leading Leica specialists; ask your photographic friends; ask any man you know in the photographic trade, who has an unbiased mind; check up the answers to these, and we shall be surprised if they are not unanimous in saying, "Wallace Heaton's of course."

You can't get round eleven years' experience in using and selling the Leica. There can be no one in this country with longer experience than ours. To the best of our knowledge and belief, we were amongst the first users and sellers of the Leica in England. The fact that we sell ciné cameras and projectors, Kodaks, exposure meters, and in fact everything photographic, is merely proof of our bigness, and does not prove that we do not specialise in miniature cameras.

For the last ten years the greater part of our concentration has been on miniature cameras. A glance at the file copies of our advertisements proves that for that period we have been advertising the Leica camera, and certainly we held the first comprehensive stocks of accessories. It is equally true that not only do we carry the largest and widest range of miniature cameras and accessories to-day, but we are usually first with every new attachment, accessory and service.

Our staff includes some of the foremost exponents of miniature photography, and every member is competent to offer advice not only in the selection of the most suitable apparatus, but in securing the best results.

Under one roof in our spacious new shop you can see every known reputable make of miniature camera, and you can command the courteous service of a painstaking expert whose patience and understanding will enable you to choose the right apparatus at your leisure.

And this is important—practically every one of our assistants is an expert "Minicamera" user, and as you sit quietly in comfort they will gladly demonstrate any, or all, of the cameras in which you may be interested—and without any obligation. You need only buy when you are ready and then for cash or on our "Easiest of easy payments."

Other obvious reasons for bringing your problem to us are the exclusive Wallace Heaton "after-sales" features. For example, we provide FREE INSURANCE covering "all risks" for "Minicameras" costing £10 or more, and we are broad-minded enough to give you this service, even though the apparatus was purchased from any of our competitors.

Postal envelopes for your spools are provided free, as are our cards for recording exposure data. Our expert developing service is organised for the keen amateur.

"Microlux" is the individual service for the best fine-grain enlargements and "Automax" provides 3½×2½ pictures from "Minicamera" negatives at 2/- per dozen. The 500 Leica accessories, every recognised make of enlarger, all the best fine-grain developers, colour and monochrome films, a veritable library of all the latest books on "How to use your miniature camera," showing wonderful examples of miniature camera photography, and, indeed, everything for the "Minicamera" enthusiast is to be found under one roof at Wallace Heaton's.

In subsequent advertisements we propose to give the unique Wallace Heaton miniature camera service point by point, and, in the meantime, please accept our cordial invitation to call and see our permanent exhibition at our own Galleries, at 127, New Bond Street, W.1. Here Dr. Paul Wolff's Second Exhibition of Leica Photographs was first seen in this country, and here many unique photographic exhibitions will be held from time to time. Needless to say, admission is free.

MAKING 'Light' OF NIGHT PHOTOGRAPHY

» FREE ! «

This interesting book, "NIGHT PHOTOGRAPHY—Picture Making at Night — Indoors and Out" — contains 28 pages of clear information with illustrations and diagrams. Please mention this paper.

WINTER photography is extraordinarily fascinating and full of wonderful possibilities—indoor scenes of delightful domestic incidents, "at home" portraits—amateur theatricals—all these are available, and remember it is just as easy as making daytime pictures in summer. Outdoors there are striking pictures to be made with ordinary street lighting—as evidenced by this picture by Bernard Cuthbert reproduced above. Hypersensitive Roll Films and Plates place in your hands all this wealth of wintertime photographic opportunity, bringing a new interest and a stimulating freshness to your hobby.

Carry On, Mr. Amateur Photographer!

3 "Photoflood" Lamps in "Kodaflectors"; Kodak S.S. Pan. Film; f3.5; 1/25th second.

Kodak Super Sensitive Panchromatic Film and the Kodak Night Photography Aids will help you get indoor pictures after dark no less interesting than those you took outdoors during the sunny months—help you make them with no less certainty of success.

It's no trouble at all to plug one or two "Photoflood" Lamps into the electric light sockets. Their brilliant light, concentrated, directed where you will by the handy little "Kodaflector" Reflectors, makes indoor photography not only possible, but *easy* with any camera loaded with Kodak Super Sensitive Panchromatic Film. Be sure you get Kodak "S.S. Pan.," the lightning-speed film that's extra fast to artificial light.

"Photoflood" Lamps, **2/6** *each. "Kodaflector" Reflector,* **3/-**. *"Kodaflector" Outfit, including Reflector, Stand, and 9 ft. of flex, with plug,* **7/6**.

KODAK SUPER SENSITIVE PANCHROMATIC FILM

and the

KODAK NIGHT PHOTOGRAPHY AIDS

New Night Photography Booklet ready; 24 pages of pictures, diagrams, lighting and exposure hints. Ask your Kodak Dealer for a free copy or write to Mr. A. P. Talbot, Kodak Limited, Kodak House, Kingsway, London, W.C.2.

A BOOK YOU OUGHT TO READ

A wonderful survey of photography in all its aspects, by Dr. C. E. K. Mees, Kodak Director of Research. Based on the lectures given by Dr. Mees at the Royal Institution last Christmas, this book deals with the history, science and practice of photography and cinematography in a simple, lucid way. From Kodak Dealers and Booksellers, price **7/6**

THE BEST—WITHIN REACH OF ALL

. . . This is a concession for which we can thank the easy payment system. Even the most expensive apparatus—probably far beyond our hopes of ever owning, can now be ours. At Wallace Heaton's, the first of nine equal monthly payments secures any item that is chosen from the most comprehensive range of apparatus in the country. *Even used bargains* can be had by this simple method of purchase—and when it is considered that these are 30 to 70 per cent below list prices, they become easier still to buy when it only requires a few shillings a month to buy what originally was, say, a £20 or £30 instrument. A great point in favour of Wallace Heaton's easy payment plan is the fact that every transaction is strictly confidential—there are no harsh formalities, and no awkward personal questions are asked. Only 5 per cent is added to the cash price of the goods, and after the first monthly payment full use can be made of any purchase while the balance is being paid. There's many a hundred easy payment customers on the Wallace Heaton books; it's quite the thing nowadays to buy on easy terms, not only by folks with moderate purses, but by bigger wage-earners who wish to pan out their incomes wisely. Why don't *you* buy this easy way?

BARGAINS IN USED APPARATUS

An exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners

COUPON *which must be affixed to the back of each entry.*

WALLACE HEATON LTD
"OPEN COMPETITION"

November 25th, 1936.

FOR ANY AMATEUR—ANY SUBJECT—WITH ANY CAMERA

If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Simple spotting to remove pinholes, etc., is all that is permitted. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

WALLACE HEATON Ltd.

127, NEW BOND STREET, LONDON, W.1

For £1:7:9 down secure a New "SPECTO" 9.5-mm. Projector

Sets an entirely new standard in Ciné Projectors, combining highest standards of workmanship, design and performance with most moderate price. British made.

Note these points:

Framework and base of aluminium and high tensile alloy castings, giving massive strength without undue weight. ● All gearing and driving mechanism runs in oil bath. ● Double-claw movement. ● Ready accessibility of all important parts, for cleaning, inspection, etc. ● Fast, silent and automatic rewind. Motor speed regulator. Mechanical tilting adjustment. Separate lamp switch.

Special 3.5-amp. Prefocussed LAMP, with HIGH-POWER CONDENSER, OPTICALLY WORKED MIRROR, and 35-mm. f/1.7 PROJECTION LENS. SCREEN LUMINOSITY INCREASED 100 per cent. High-efficiency Cooling, combining powerful fan and finned lamp-house.

Marked absence of flicker, due to most careful adjustment of film transport and shutter speeds.

PARTICULARLY ECONOMICAL, BOTH IN UPKEEP AND IN FIRST COST.

Price £11:17:6

Nine monthly payments of 27/9.

Built-in Transformer or separate Resistance £1 10s.; Dallmeyer 2-in. "Superlite" Projection Lens, £1 1s. extra.

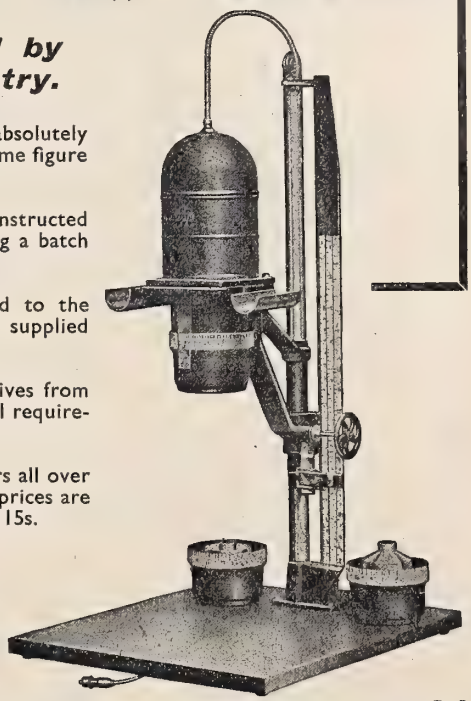
"EXAKT"

AMATEURS! HERE'S YOUR IDEAL ENLARGER

So good that it is being installed by trade-workers throughout the country.



AUTOMATIC FOCUSSING.—Its easy automatic focussing is absolutely foolproof—an enlarging scale and focussing scale are set at the same figure and perfect sharpness is instantly obtained.

RIGID CONSTRUCTION.—The mechanism is so rigidly constructed that the perfect focussing cannot accidentally alter, however big a batch of work you are doing.

INTERCHANGEABLE LENSES.—Special value is attached to the interchangeability of lenses, but a STEINHEIL-CASSAR f/4.5 is supplied as standard equipment with all models.

FOUR SIZES.—The Exakt is supplied in four sizes for negatives from ciné and Leica size up to 9 × 12 cm. This range covers all normal requirements.

PRICES WITHIN YOUR REACH.—Although trade-workers all over the country are installing this splendid enlarging apparatus, the prices are well within everybody's reach—they range from as low as £12 15s.

SEE THE "EXAKT" AT YOUR DEALERS

Every Camera User should get a Copy NOW!

The AMATEUR PHOTOGRAPHER

DIARY

and Handbook for 1937

This useful little handbook contains, in addition to the usual diary pages—one week to the page—over fifty pages of facts and formulæ for the keen camera user. Information is given on developing, fixing baths, mountants, and finishing negatives and prints. Numerous reference tables dealing with hyperfocal distances, enlarging, screen distances for lantern projection and exposures are included, as well as sections for exposure records and personal memoranda.

Size 3⅛×5⅜ inches, well printed, neatly and strongly bound in leather cloth, with back loop pencil and round corners.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model 111a, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

"TO REMIND YOU IN GOOD TIME"

GO to your dealer and ask him to show you all the miniature cameras. Ask him which camera he considers will give the cleverest photography with the least experience. Ask him which camera wins the big prizes in open photographic competitions. Consider the merits of each instrument from an amateur's point of view—note their prices. Inevitably you will come to the conclusion that the

Rolleiflex

is not only the best value, but is the best possible Christmas gift. You'll be *proud* to give a "Rolleiflex," a camera that is capable of winning the *Daily Herald* big first prize two years in succession is good enough for anybody. "Rolleiflex" is so easy to use. It gets perfect pictures at any time, and shows each picture full size and right way up on the ground-glass screen, before the exposure is made.

The "Rolleiflex" takes 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ roll film—at a cost of 1d. per exposure, or can be used with plates, 35-mm. ciné film or as a stereo camera. With Compur shutter speeded to 1/500th sec., T. and B., and Zeiss Tessar f/3.5 lens.....**£25**

"THE GOLDEN BOOK OF THE ROLLEIFLEX."

An ideal gift to the "Rolleiflex" owner. Contains 127 masterpieces of photography together with the technical data. Will inspire and help every camera owner to better and more enjoyable photography. Price **7/6**

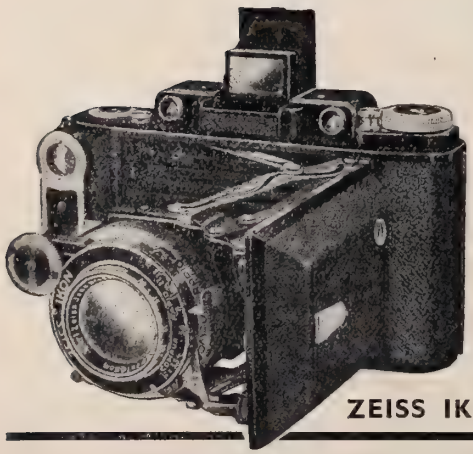
"CELFIX HOUSE"

51, GRAY'S INN ROAD,



Phone: Hol. 7311/2. **LONDON, W.C.1**

Look for this sign on your Dealer's window.

"But, I say! the shutter release doesn't work!"
"Ah! Let's wind on the film. Now we'll try it."
"Oh, it works all right now. But what is the idea of that?"
"Well, you see, you simply cannot make double exposures with the Super Ikonta II, because the shutter release and film winder have a special interlocking arrangement."
"I see; but what's this little signal for?"
"This red signal by the release shows that the film has been wound on. It goes red when you wind on the film, and turns white again when you have taken the picture."
"Zeiss Ikon have certainly done away with the bugbear of double exposures this time."
"Yes; and the rotating wedge distance meter does away with that other difficulty—of focussing correctly."

ZEISS IKON

THE Super Ikonta II can be obtained in two models for $3\frac{1}{4}'' \times 2\frac{1}{4}''$ (or 16 divided $2\frac{1}{4}'' \times 1\frac{3}{4}''$) and $2\frac{1}{4}'' \times 1\frac{3}{4}''$ pictures. It provides in a roll-film camera most of the advantages found only in miniatures—interlocking device preventing unintentional double exposures, built-in rotating wedge distance meter, chromium-plated fittings, rapid Zeiss Tessars and Compur rapid shutters.
A model taking 11 pictures $2\frac{1}{4} \times 2\frac{1}{4}$ on the usual $3\frac{1}{4} \times 2\frac{1}{4}$ roll-film spool provides similar advantages.

Full particulars of the Super Ikonta are contained in the new Zeiss Ikon publication, "Large size negatives but with miniature camera advantages." Copies, together with name and address of nearest stockist, post free on request.

Topics of the Week

THE advent of the miniature camera is bringing about a great accession of women into the ranks of amateur photographers. As someone rather ungallantly said, "That is nothing to its detriment." When photography began its exponents were almost wholly male, Mrs. Cameron and a few others notwithstanding. The increase in women photographers has taken place *pari passu* with diminishing bulk of apparatus and added simplicity of operation. It may have been retarded a little by the neglect of camera manufacturers in the past to study elegance and lightness. They have been so keen on manipulative efficiency, shutter speeds and the like as to have forgotten that a camera is a thing to be worn, and that, to women at any rate, and to many men, appearance, style and ease in carrying are important considerations. The comfort of a camera, its balance and contours when held in the hand, have not been enough considered.

Emulsions for Miniature Work.

It is sometimes forgotten that while camera design has been developing in the direction of the miniature, photographic emulsions have kept pace, and the miniature on its arrival has found material worthy of it. At the first meeting of the new Miniature Camera Section of the Royal Photographic Society, which was devoted to a talk by Mr. George Ahrens on emulsions for miniature work, one speaker mentioned, by way of contrast to present conditions, that as far back as 1909 he used what was really one of the first miniature cameras ever to be constructed, and took it to Spitzbergen on an expedition; but the available emulsion was of such graininess as to give the impression of a continuing hailstorm, which was perhaps appropriate in the Arctic Ocean, but did not correspond to the records the explorer wanted to bring home. At the same meeting some first-rate work with the miniature was shown, one example being pictures taken on the engine of the Scotch express, showing the interior mechanism, while travelling at something above sixty.

LONDON LANDSCAPES (No. 47).

This November scene in Hyde Park well conveys the greyness of London in winter.

Light Filters in Landscape.

Mr. Ainger Hall brought exact science into pictorialism the other night in an address to the Pictorial Group on the use of light filters in landscape. He showed how by judicious selection and use it was possible to render coloured objects in monochrome in more or less correct relationship with each other. The effect of the colour of the light which is used to form the image, the effect of colour on the contrast of the subject, and many other points such as these, were excellently expounded, and slides were shown indicating the differences made to the result by the use of different filters. At the close of it all one of these terrible pictorialists made the devastating remark that all this business of filters was very nice and scientific, but inasmuch as a coloured subject can never be exactly reproduced in monochrome, and the monochrome result is bound to be only a convention, the precise adjustment of greens and reds and yellows is rather a waste of time. Discussion arose on one little practical point, whether filters varied with long use. One worker said that his filters, except just at the time of exposure, were always kept in the dark, and in those conditions he

had never found them to vary, but another said that, in the case of a K 2 screen at all events, he had kept it mainly on the lens, and it did not appear to show any difference over a period of many years.

The Halted Moment.

In the film studios the story is the thing, and the photographic technique is secondary, although it must never be allowed to fail. But in one new film the sheer excellence of the photography in one scene has got home even to the film producer and caused him to prolong one particular movement on no other ground than that the camera had done so well. It is the new George Arliss film in which by a trick of double exposure Mr. George Arliss meets and embraces Mr. George Arliss. In the ordinary way the embrace would last but a moment on the screen, but it is "held" because of its superb photographic achievement. We could wish that more often the photographic value of what is seen only for an instant were emphasised. Some of us have gone to the "pictures" on occasion, not in order to absorb ourselves in melodrama, but in an attempt to study lighting and composition. Sometimes it has been quite a useful exercise, but the rapid change of the film, which from the popular point of view is its great value, militates very much against such detached study. It would be perhaps too cynical an observation that just as the wireless has enabled us to appreciate the sweetness of silence as we never did before, so the film may yet render its highest service in enabling us to appreciate the "still."

Dufaycolor.

Dufaycolor was claimed by Mr. J. Mitchell in his address to the Colour Group the other night as the last word in the screen-plate process, a process which itself represented the simplicity of genius—the sort of idea that might have been thought of by some old mediæval artist whose ordinary job of work was turning base metals into gold. A little of the advice Mr. Mitchell gave as to the process may be of interest to colour workers. For development he preferred the ammonia formula to the sulphocyanide given as an alternative in the instructions. In general it was rather slower in action, and he thought better results were obtained with it. Efficient washing was most essential between every bath. Agitation was essential, especially during the first development and the first part of the bleach. Every bath should have vigorous agitation, and for that reason people developing flat films ought not to try to tackle more than two pieces of film at a time. The bleaching bath should be reasonably fresh. Bad bleaching was due either to stale bleaching solution or absence of agitation. Chromium intensifiers and bleachers should be avoided like the plague. For reduction the normal Farmer's would give the best results. Mr. Mitchell showed a long series of excellent results in Dufaycolor, including some London night scenes which had had from two to six seconds' exposure at f/3.8 and which were very realistic.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Reducing Bromide Prints.

I have used Farmer's reducer for enlargements with dull highlights or general fog, but do not find it always satisfactory. Is there a better method? *P. H. (Louth.)*

A great deal depends on what is required to improve the print; Farmer's reducer is not suitable for all cases. It works quite well, however, when only a small amount of clearing-up is necessary; when the colour is poor through overexposure or other causes; or when the print shows stress marks.

The working solution should be a weak one. Of a 20 per cent plain hypo solution one part should be taken, and four parts of water added. Of a 10 per cent potassium ferricyanide solution add enough to make the bath a pale yellow colour. The print should be drawn through the solution once or twice, laid on a sheet of glass, and rinsed under the tap. If the action is not sufficient, repeat the process, limiting immersion to a few seconds only.

A white dish should be used, and at the first sign of the clear yellow colour becoming greenish, the solution should be thrown away and a fresh one prepared. Its activity is short-lived. Sepia-toned prints also respond to this treatment, but the colour is generally affected. The action with gaslight and chloro-bromide prints is still more rapid and needs careful watching.

Here is another method for use when only slight clearing and brightening of the print is required. It must be used only for prints which have been thoroughly fixed and washed. The print is immersed in:—

Potassium iodide	30 grs.
Water	10 grs.
Iodine	3 grs.

Solution of each ingredient must be complete.

The white parts of the print soon turn an indigo blue colour. Transferring it to an ordinary hypo fixing bath clears away the blues at once, and reveals the extent of the action. If this is insufficient the treatment is repeated after washing, but if carried the least bit too far, some of the delicate tones will also vanish.

An alternative to the above bath is:—

Thiocarbamide	20 grs.
Citric acid	10 grs.
Water	10 oz.

This again will not work if there are still traces of hypo in the print. No blue tinting occurs with this bath, so that the action can be watched easily.

Hydrochloric Acid.

It seems as though there are several kinds of hydrochloric acid; which is the sort to get for photographic purposes? Will spirits of salts answer the purpose? *S. L. P. (London.)*

Any hydrochloric acid is an aqueous solution of the gas hydrogen chloride. It is a very corrosive fluid, giving off pungent fumes, and needs handling with great care.

For any photographic purpose, when it is to be added to a solution, the "pure" form should be used, this containing about 35 per cent of gas. The "commercial pure," containing about 30 per cent, may also be used, but this is liable to be contaminated with ferric salts which may cause trouble.

Still more impure is the cheaper form, often called spirits of salt, or muriatic acid. This is useful for cleaning dishes and graduates, for which purpose it may be used repeatedly, the vessels being thoroughly rinsed out afterwards. The cheap variety is an "oil-shop" product, but the pure grades should be bought at the photographic dealer's or the chemist's.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

EARLY PREPARATIONS *for* CHRISTMAS

Although Christmas still seems some long way off, the thinking photographer who intends to use his hobby as an assistant in solving his Christmas gift problem will realise that the amount of work he has to get through before the period arrives is considerable, and an early start should therefore be made.

THE kinds of personal photographic gift likely to be given at Christmas time by the amateur should be decided on without delay, and those which will obviously take the longest time to prepare should be commenced at once.

Some Suggestions.

Of late years cut-out figures of one's friends have become quite popular as Christmas gifts, and these are within the reach of practically every amateur who possesses an enlarger.

The figure, preferably taken from a snapshot in which the friend is caught in some characteristic attitude, is enlarged, pasted on to three-ply and then the outline very carefully cut round with a fretsaw. The cut-out is then inserted in a small block of polished wood, and the resulting article is very pleasing.

Incidentally, it is quite possible to get the younger members of the family to work with a fretsaw once the figures have been enlarged, thus giving them an interest in both photography and fretwork.

Jig-saw puzzles would also come under this heading, the ordinary snap, or the pictorial masterpiece, if you will, being enlarged to a suitable size and pasted on three-ply (or five-ply if a stronger finish is desired). The interlocking design is then drawn on it, and the whole carefully cut out with a fretsaw. All edges of both kinds of work should be nicely finished off, and it is an advantage to paint the back black or dark brown. Don't forget you require a second enlargement to paste on the lid of the box.

Passe-Partout.

A well-produced photograph bound in suitable passe-partout makes a very nice present, especially as one can choose either a landscape subject or a figure subject to suit the recipient.

As the binding can now be obtained in such a variety of shades and colours, discreet enquiries should be instituted as to the colour most likely to be suitable to the recipient's taste, and if the gift is to be a surprise, as, indeed, all photographic pictures should be, this may take longer than was first expected. Careful binding is essential, and any attempt at rush work of this kind will lead to failure.

There is also another kind of photographic "framing" which has come into vogue of late years, and that is the enlargement of portraits and then the mounting of them on a piece of plate glass, face to glass, the edges of the glass in front being bevelled, the whole being mounted in a polished wooden block, or some other pedestal to hold it upright.

These are quite within the sphere of amateur work, and it should be remembered that the enlargements will need to be very good, as the close contact with the glass shows up any defect in the technical work.

Calendars.

A glance at the advertising columns shows that calendars to take one's own photographs are on the market in plenty, and though these are partly made already, the necessary time to complete them soon swallows up the ordinary amateur's little leisure, so that work should be commenced at once.

Contact prints being suitable for many of these ready-made calendars, providing the size is not less than $3\frac{1}{2} \times 2\frac{1}{2}$, brings this work well into the realm of even the veriest beginner, and quite tasteful results may accrue from his summer holiday snapshots. The great secret of this kind of gift is to present it to the very person whom the photograph will interest most.

Workers making their own calendars with card foundation and superimposed picture and date-tabs will require even more time, and should hasten to select suitable cards and materials.

Christmas Cards.

There are three kinds of Christmas-card workers, those who simply insert their contact prints into a folder with greetings suitably inscribed on the outside; those who invest in more elaborate, printed cards with space left for the insertion of their own photographs; and those who do the whole job themselves.

Obviously, if the latter have a wide circle of friends they should be well on with their job by this time, especially if they are making their cards from large sheets of double-weight bromide paper, and folding them to form cards, attaching ribbon to the back, etc.

Some of these amateur-made cards are exceedingly clever, and really are an extremely nice greeting to receive, because one feels that a tremendous amount of pains has been expended on the production of them. Incidentally, it is better to buy the bromide paper required for these in larger quantities than usual, otherwise small packets will add considerably to the cost.

The decorative folders which are issued for the amateur photographer to add his own snapshot are usually made for contact prints, but, in these days of miniature negatives, these may necessitate small enlargements, as one can hardly expect to mount a Leica or Contax size print on a Christmas card.

Mounts.

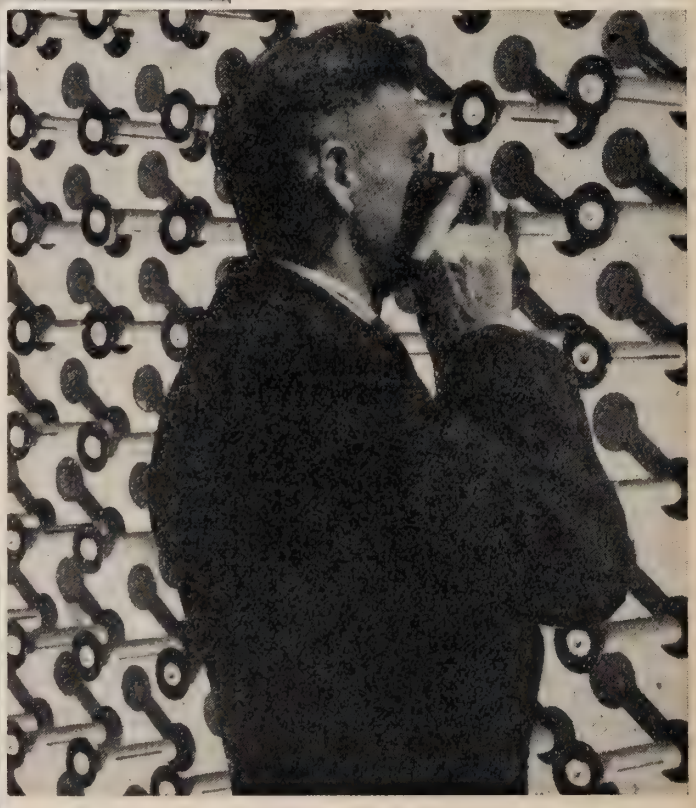
A good deal of discrimination can be exercised in the choosing of the various mounts to suit the particular subjects, the whole to be in harmony with the wishes of the sender. It is important not to leave this sort of task till the last minute, when the wife wants something done ready for the Christmas festivities, and the consequence is a rush which detracts from the final result. Incidentally, if "bought" mounts are to be used for the purpose it is wise to obtain them without delay, or many of the best will have been "sold out."

Those who simply insert their cards into folders certainly have a bit more time to spare, but even they can be getting on with the work, because there is the Christmas photography to be thinking about, and necessary arrangements for the various experiments in indoor work with the camera on the day itself may take quite a considerable time.

The amateur will think of many other ways in which he can speed up his preparations for the season's greetings, but the great thing is to start right away before the actual Christmas rush begins.

Special

By W. FISHER CASSE



To-morrow's Route.

HOW often it is that an otherwise fine picture is spoilt by an unsuitable background. In our concentration on the principal subject we overlook some incongruous object which immediately attracts the eye in the print. A bright and insistent high-light, for instance, seems to dominate the picture, or a good portrait study is made ridiculous by a tree which seems to grow out of the sitter's head.

There are several ways in which this difficulty may be overcome. If the worker is expert enough one background may be removed and another substituted by double printing. Again, a suitable background may be provided when the subject is photographed, thus avoiding any retouching or other handwork on the negative. There is another method by which a suitable background may be provided, and it is the object of this article and its accompanying prints to point out how this may be done.

If the subject is such that it may be cut out in one piece it may be pasted on to the photograph of the background (taken separately), and the result obtained is often quite pleasing and generally unusual. It is not necessary that the background chosen should be such as to deceive the observer into thinking that it was photographed simultaneously with the subject. On the contrary, the more obvious the difference between the subject and background, the more striking and attractive will be the finished result in most cases.

The Miniaturist.

The Bookworm.

Despite this difference in appearance, however, there must be some logical connection between the subject of the photograph and the objects which constitute the background, otherwise the reason for the choice of that particular background is not apparent. The background should be as unobtrusive and as uniform as possible in order to accentuate the figure or other subject.

Uniformity is best obtained by using a large number of

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Backgrounds

A NOVEL WAY OF DEALING WITH AN EVER-PRESENT PROBLEM.

Dark-room Work.

The Beekeeper.

similar objects laid closely together. As an example, the picture of a cook at work might be pasted on to a background consisting of the photograph of a large number of eggs laid in orderly rows. A picture of a photographer at work in the dark-room might have as a background a print of a photograph of hypo crystals.

Uniformity is also obtained by using one object as the subject for the background picture, provided that object is definitely associated with the principal subject. A hiker cut out in silhouette might be pasted on to a photograph of a map. A musician might have as a background a print of sheet music.

If the background tends to dominate the picture it may be made less obtrusive by under-exposure of the bromide print. Full development of such a print should always be given. Generally speaking, light subjects or those taken against the sun and showing lines of light round the edges should have dark backgrounds, while most normal subjects require lighter backing.

When the subject has been cut out in silhouette it should be turned face downwards and the edges thinned down by scraping them with a sharp razor blade. This has the effect of making the junction between the subject and the background less obvious. If this is done carefully the joins should not be noticeable even at ordinary viewing distance. If the result is successful the composite print may be copied, taking care that the lighting is either very diffused (if daylight) or comes as equally as possible from both sides of the print (if artificial light). This will prevent any line appearing at the joins, and will give a new negative from which contact prints or enlargements can be made easily.

Finally, although this method may not produce pictorial results, yet the prints have a charm of their own and add interest and a touch of the unusual to any collection or album of photographs.

"Of course I'll be careful."

Readers' Hints. Tips and Gadgets

TIMING ENLARGEMENTS.

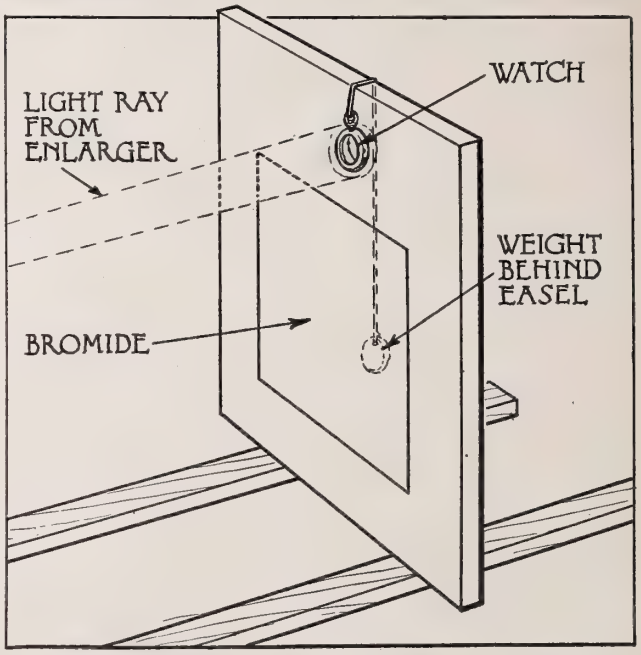
THE most useful of many gadgets in my dark-room is a piece of string with a hook attached to one end and a weight to the other.

All photographers know the difficulty of illuminating the watch (or clock) *in a convenient position* and also keeping an eye on it whilst enlarging.

The following simple way out of the difficulty costs nothing, and can be arranged in a few minutes.

First of all, drill a hole about half an inch in diameter, right through the negative carrier of the enlarger as near to the negative as convenient. This allows a small circle of white light to fall on to the enlarging easel conveniently close by the side of the projected image, either to one side or above as shown in the sketch.

The weight on the string should equal the weight of one's watch, and the length of the string be such as to allow for a reasonable range of adjustment.



The watch is then hooked on and can easily be placed so that the patch of light falls on the seconds dial even if it does not illuminate the whole of the watch. The watch is perfectly safe and can be moved to any required position in an instant.

If fogging is feared a piece of gelatine filter can be fixed over the hole in the negative carrier.

The great advantage of this method of lighting the watch is that the watch is close by the projected image—*where it should be*—and the worker can see the dial almost without losing sight of the bromide paper.

Precisely the same applies to the vertical enlarger, except that the watch lies on its back on the horizontal easel instead of being suspended.

MAURICE E. PARKER.

A COVER DESIGN FOR YOUR ALBUM.

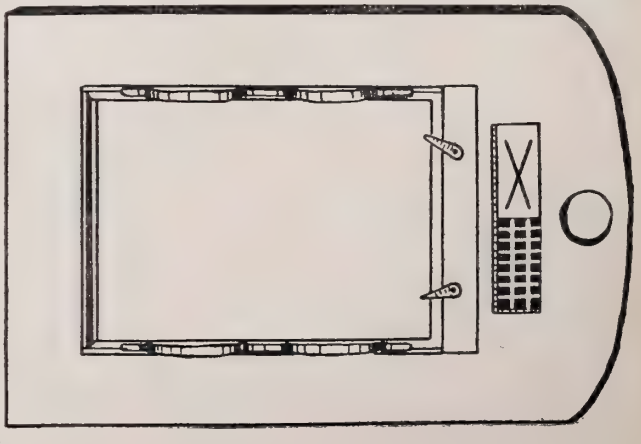
THERE are many ways of decorating the cover of a photograph album, from the common or garden stick-on label to the more elaborate wood-cut or cubist design. Here is an idea, however, which is neither elaborate nor costly, and which will distinguish at a glance one album from another.

Most amateur photographers like to keep at least one album for " home snapshots," taken either in the house or round the garden, so what could be better than to have the name of your house on the cover ?

As the accompanying snapshot shows, all that is necessary is a portrait attachment, so that a " close-up " of the name-plate on the gate may be taken, a brief exposure, and there you are. It does not much matter whether you enlarge the photograph to the size of the album cover or whether you merely paste on the snapshot as it is ; it makes an effective title in either case. When your friends " open the gate " they will find inside only photographs of your home and its garden.

C. C. L. MILLIGAN.

AN ENLARGER FOCUSSING HINT.

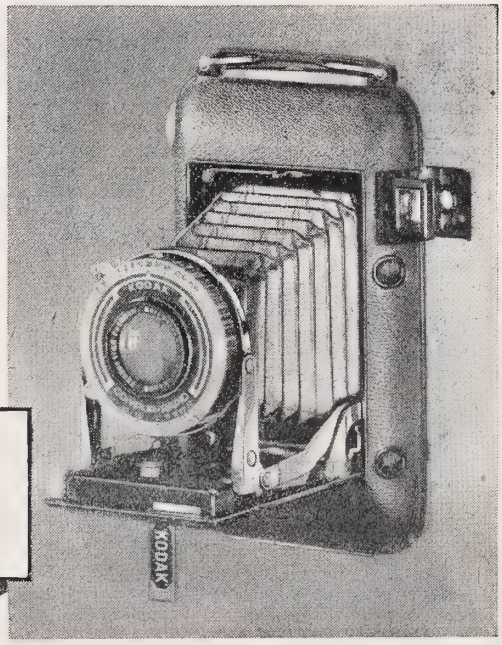


FOR securing critical focussing in the enlarger, the use of a ruled screen in place of the negative has often been recommended, but as this necessitates a double change-over, it is probably neglected by a good many amateurs. A strip of glass let permanently into the side of the enlarger carrier, however, offers the advantages of this method without the extra trouble otherwise entailed.

By pushing the carrier a little farther into the enlarger, the ruled strip is brought into view on the screen, and all one has to do to " replace " the negative is to pull the carrier back again into its first position.

A strip about $2 \times \frac{1}{2}$ in. is a convenient size for a $\frac{1}{4}$-plate carrier. Cut the glass first and use this as a template for marking the hole, and then a tight fit will be assured. For focussing, either clear lines on a black ground or vice-versa will serve equally well. In the strip illustrated a choice of either was made possible by covering half with black paper and scoring it through with a knife when dry, and by sticking two pieces of black cotton on to the remaining clear half.

To ensure the strip being a really accurate guide, it must of course be fixed so that the black paper and the cotton are in exactly the same plane as the film side of the negative, and care must be taken always to put the negatives in the carrier the same way round.



LESLIE W. BOLTON.

Meet THE PRINCE OF "KODAKS"!

SPECIALIZATION—A NEW PRINCIPLE IN THE PHOTOGRAPHIC SUPPLIES TRADE

Three years ago the firm of R. G. Lewis came into existence in order to specialize in all branches of miniature camera photography. It was at that time our opinion that there existed in Great Britain a very real demand for a highly individual organization prepared to bring to the photographic trade a more scientific attitude and a more expert knowledge of the problems and the special technique of miniature photography. That this, our unflinching policy, has been acclaimed by the photographic public is evident from the fact that in so short a time we have advanced to the leading position as distributors of high-class miniature precision apparatus. The firm of R. G. Lewis is staffed entirely by active miniature camera enthusiasts. It is an outstanding feature of our business methods to offer frank and in every way unbiased advice to would-be purchasers on the selection of the most suitable apparatus for their purpose. We invite miniature enthusiasts to give us the opportunity to justify our assertion that our service is in every way an unparalleled one.

THE "NIGHT" EXAKTA

We personally recommend the "Night" Exakta to all photographers, both amateur and professional, who are looking for a reasonably priced miniature camera capable of doing work under the most adverse lighting conditions. The "Night" Exakta will secure well-exposed negatives at 1/25th, 1/50th and often 1/100th sec. in artificially-lit interiors or in the streets at night. Apart from this special work, however, the f/1.9 Primoplan lens with which it is fitted, when used at ordinary apertures, gives results from portrait, landscape and architectural subjects, etc., indistinguishable in point of quality and definition from those obtainable when using a first-class lens with f/3.5 or f/2.8 aperture.

"Night" Exakta ,fitted Primoplan f/1.9, shutter speeds 1/1,000th sec. to 12 secs.....£39 10 0

We shall be glad to take any make of Modern Miniature Apparatus in part exchange for the "Night" Exakta or Cinema Camera. Our allowances against Miniature Apparatus are, of course, the Highest in the Trade.

MINIATURE ENLARGERS, AND ACCESSORIES FOR WINTER PHOTOGRAPHY.

In winter, as in summer, R. G. Lewis's is the Mecca of the serious amateur. We keep in stock every make of miniature enlarger and all accessories for special enlarging purposes. We have just produced a booklet on the subject which we shall be delighted to send on request. **"Miniature Enlargers,"** by R. G. Lewis, deals comprehensively with all types of instruments, which are frankly discussed with the aim of helping amateurs to select the most suitable for their purpose.

Other booklets dealing with winter photography which we shall be glad to send on request are :—

"NIGHT PHOTOGRAPHY."
"PICTURE-TAKING INDOORS."
"SIMPLE LIGHTING EQUIPMENT FOR AMATEURS."
"DUFAYCOLOR IN ARTIFICIAL LIGHT."

NEW PUBLICATIONS ON MINIATURE PHOTOGRAPHY.

"CAMERA JOURNALISM WITH THE MINIATURE CAMERA," price 4s., postage 2d.
"CORRECT EXPOSURE WITH THE MINIATURE CAMERA," price 4s., postage 2d.
"A GOOD PICTURE EVERY TIME."
"130 PHOTO-FAULTS."
"SHARP FOCUS AND ACCURATE EXPOSURE."
"TAKING NIGHT PICTURES."
1s. 2d. each, postage in each case, 2d.

A new range of Paraphenylene Developers specially prepared by R. G. LEWIS.

Sease No. 1 (or straight paraphenylene) requires three to four times increase in exposure, but gives the finest possible grain. Price 1s. 2d. per tin.

Sease No. 2, the standard paraphenylene-diamine formula. Yields a slightly coarser grain than the No. 1 formula, but only requires twice the normal exposure for supersensitive panchromatic films, and slight or no increase for fine-grain panchromatic films. Price, 1s. 2d. per tin.

Sease No. 3, *Modified*. A special developer for super-sensitive panchromatic films. A little less than double normal exposure is required. Price 1s. 2d. per tin.

Paraphenylene-diamine-Metol. The most suitable developer for use where photographs are taken under bad lighting conditions ; for stage, action and candid photography in general. This developer has been evolved to produce shadow detail, gradation and contrast, combined with exceptionally fine grain in cases where only minimum exposures are possible. Price 1s. 9d. per tin.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

A Few exceptional Cameras with Extra-Wide Aperture Lenses. Specially recommended for Winter and Artificial Light Photography in general.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

At the Ballet *with a . . .* Miniature

By MERLYN SEVERN.

THERE is more than a little truth, I fear, in the jibe so often levelled at miniaturists by the users of large cameras: that we spend twice as much on our apparatus as they do, and take twice as much trouble over processing our negatives, in order to produce photographs which are practically indistinguishable from theirs.

Indeed, I know owners of Leicas and Contaxes who have never taken a photograph that could not have been taken just as well with a box Brownie. They do not seem to realise that the miniature has opened up entirely new fields to the camera.

One of the most interesting of these fields is action photography at night; and the stage, particularly when a ballet or a cabaret show is being performed, offers action of a particularly fascinating kind.

The pictures illustrating this article would have been regarded with open-eyed amazement a few years ago; but the modern miniature, with its wide-aperture short-focus lens and coupled range-finder, brings them within the scope of the amateur of average skill.

The range-finder is especially valuable for this work. It is extremely difficult to keep guessing the distance as the performers dart about the stage, yet accurate focussing is essential for really good results. The short-focus lens has, in relation to its aperture, great depth of field; but a big enlargement will reveal that definition is not equally sharp throughout this field; it is important that the plane of sharpest focus should coincide with the centre of interest. The range-finder, particularly if it is combined with the view-finder, will take care of this almost automatically, leaving you free to concentrate on obtaining a pleasing composition.

This is really the most difficult part of the job; once you have taken up your position (whether in the audience or behind the scenes) you cannot change it; you must rely on choosing a moment when the performers are happily grouped to make the exposure.

"DEATH OF THE SLAVE." *Taken at Covent Garden during performance of the ballet "Scheherazade." 1/50th sec. at f/2, Agfa ISS film, Contax II camera, 5-cm. Sonnar.*

"CABARET." *Taken at a private entertainment. 1/25th sec. at f/2, Agfa ISS film, Contax I camera, 5-cm. Sonnar. The enlargement from which the block was made is 12 in. high; the contact print shown is reduced in the same ratio. Note that part only of the negative has been used.*

Quick Decision Necessary.

The opportunity comes and goes in the fraction of a second so that it is necessary to be very quick on the trigger; this is a knack which is difficult to learn at first, but which becomes much easier with practice.

As there is never too much light in relation to the exposure that must be given, super-speed panchromatic film is essential; exposures range from 1/10th to 1/100th sec., depending on the light available and the speed of motion on the stage. It is often necessary to compromise between these two, accepting both a little blur due to movement and a little under-exposure. In most cases a compromise of this sort leads to a better picture than a blurred but well-exposed negative would give, and certainly yields better results than an exposure only just sufficient for the extreme high-lights, even if these are quite sharp.

There are, of course, occasional exceptions to this rule as to every other, and in some cases a little movement in the picture adds to the realism of the effect.

In the "Death of the Slave," for instance, sharp definition of the slave's body would have given the impression that he was standing on his head on the floor, rather than hurtling through the air in his death agony.

In conclusion, a word of warning about processing: the contrast in these subjects is very high, particularly when spotlights are used, so over-development should be carefully avoided; four-fifths of the usual time should be about right.

(A further example of Miss Severn's work is reproduced on an Art page in this issue. It was taken at Covent Garden during a performance of the Ballet "Le Beau Danube." 1/50th sec. at f/2, 5-cm. Sonnar lens in Contax II camera, Agfa ISS film.)

STORING PRINTS
from Miniature Negatives.

By W. R. DAVIDSON.

EVEN before I took to enlarging my photographs, much travelling and the pursuit of pictorial photography in many lands had convinced

The Box and its Contents.

me of the inadequacy of albums for the storage of my pictures. They are too static and carry too much dead weight.

For the last year or so I have adopted a standard size for all my prints; all are enlarged on to paper $7\frac{1}{2} \times 5$ in., including the white border. This size was chosen as the happy mean between the inconspicuous and the unwieldy.

All prints are made on double-weight paper, which ensures freedom from curling. Each has a white border masking it to the required shape; this gives a finish nearly as good as one can get by mounting. On the back of each print all necessary particulars concerning it are neatly written, and the pictures are sorted into groups of similar or related subjects.

Besides serving neatness and uniformity, the use of a single size of paper allows me, without waste, to buy my paper in half-gross boxes. These boxes, which are strongly made of a hard cardboard, are neatly labelled and used to store the finished prints. Each box will hold nearly a hundred prints, and they are far easier to handle and much more convenient to pass round the fireside circle, than they could possibly be if pasted down to a hundred times their weight of clumsy album.

A Handle for the Miniature Camera

IT is often a convenience to hold a miniature camera by a handle. If used in conjunction with a short cable release it enables the camera to be operated in one hand, offering a more steady hold than could be had by gripping the camera itself. With cameras having the tripod screw bush at one end, such as the Leica shown in the accompanying illustrations, this one-hand grip is particularly convenient, the other end of the instrument being pressed against the face. The handle here shown is a small tool-handle that can be purchased at any ironmongers for a few pence, and a short length of brass screw, $\frac{1}{4}$-in. Whitworth thread, is inserted in the hole provided for the tool. The best way to do this is to heat the piece of screw and burn it in. Sufficient thread should be left projecting to allow a brass nut, or bush, to be screwed on first, which will form a bed for the camera, and can be adjusted to allow the correct amount of screw to project.

Unwanted Soft Focus

By G. K. SEAGER.

IF enlargements made from miniature negatives appear to assume the effects associated with soft focus, one can rarely say why by examination of the enlargements themselves. There are so many possible causes that only checking them one by one can bring about detection of the real criminal.

Nervous handling of the camera, arising from dilly-dallying too long at the subject, is probably about the most prevalent cause of unsharp pictures. A thumb-print on the filter when fitting

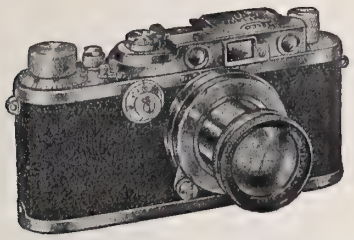
Careless handling soon makes a filter dirty.

it on is another. But when the trouble seems to have come about gradually, and suddenly assumes violent proportions, then it is that one's suspicions fly to the enlarger. For soft focus may suddenly force itself into prominence simply because of the occurrence of a subject in which definite detail is of particular importance, and not because the cause has only just arisen.

Just because the lens of the enlarger is mostly hidden from view its condition tends to be taken for granted until such time as trouble arises, and for the same reason it is the last thing, instead of the first, to be examined. Yet the lens of a vertical enlarger is peculiarly subject to dirt. Lying flat, as its back surface does, all the dust which circulates inside the enlarger settles on it.

The "convection currents" of air set up by the warming and cooling of the lamp in a cold room draw in enough dust to make the back lens look like a piece of ground glass after a month or two. Then the moisture from the chemical baths cements that dust into a film.

It is always possible to put a film against the lens when soft-focus effects are wanted, but the occasional application of a soft brush will prevent its unexpected and unwanted occurrence.



Modern Miniature Cameras

THE LEICA MODEL IIIa.

THE Model IIIa Leica is the latest model of the Leica family. Like its predecessors, it takes the standard 36-exposure length of 35-mm. ciné film and gives pictures 24 × 36 mm. The film may be bought in daylight-loading cassettes at 3s. 6d., or it may be had in cut lengths at 2s. each, trimmed ready for loading into the all-metal Leitz chargers, of which the latest models have a spool automatically gripping the inner end of the film.

Coupled Range-finder.

The camera has a range-finder operated by, and so coupled with, the focussing mount of the lens. The image seen through the range-finder is magnified, thereby making extremely accurate setting easy, and sharpness of the range-finder image is ensured by the focussing eyepiece. On test, we found that a change in distance of less than two inches at ten feet was clearly detectable. This accuracy is considerably higher than is required for a lens of normal focal length, even at the very wide aperture of f/2, but is necessary in using some of the special wide-aperture long-focus lenses available for the camera. These alternative lenses, of which there are twelve, having focal lengths from 2.8 to 20 cm., couple automatically with the range-finder when screwed into the flange of the camera, except in the case of the 20-cm. lens. The base of the range-finder is only 4 cm., thus ensuring that the two images, even when farthest from coincidence, are always within the field of view.

The winding of the focal-plane shutter automatically advances the film by one frame, so that after making an exposure, rotation of the winding-knob as far as it will go is the only movement required in order to prepare for a second. A counter indicates the number of exposures made. The shutter speeds range from 1 to 1/1,000th second, the higher speeds (1/1,000th to 1/30th second) being controlled by the dial on the top of the camera, while slower speeds (1/20th to 1 second) are set by adjustment of the auxiliary dial in front. To prevent accidental displacement of this, and to make setting easy even in the darkness of a theatre, successive settings of this slow-speed dial are indicated by clicks in this latest model. It was particularly noticed that the shutter is considerably quieter than on earlier models of the Leica.

Loading the Leica.

The base of the camera is removed for loading. This is done by drawing out a short length of film from the charger, slipping the free end under the spring of the take-up spool, and dropping both into the camera so that the length of film between them slides into its slot. On replacing the base the charger automatically opens, allowing the film to run off without coming into contact with any surface that could possibly scratch it.

Interchangeable Lenses.

The lens fitted to the model we examined was the Summar, an f/2 lens of 50-mm focal length. With this in place, and the telescopic mount closed, the dimensions of the camera are 5½ × 2⅝ × 2⅝ in., but with the f/3.5 Elmar lens the thickness is reduced to about 1½ in. The lenses all have depth-of-focus scales as shown on page 456 of our issue of November 4th, where the Summar lens, in position in a Leica, is illustrated. Provision is made for the special focussing necessary when using infra-red film, and the Summar lens has a special type of mount, so designed that the lens does not rotate when focussing, to enable it to be used for the Agfacolor process.

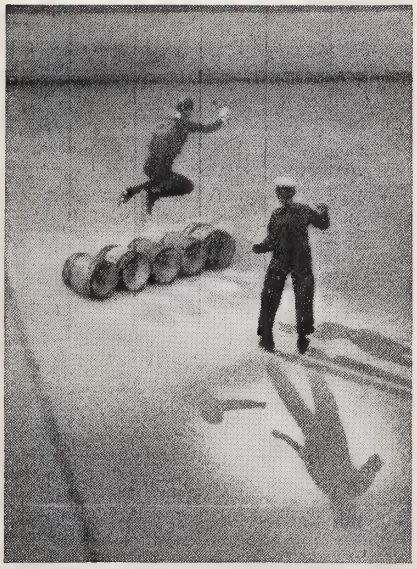
This latest model of the Leica, which has all metal parts finished in matt chromium plate, is a beautiful example of precision work of the highest grade. With the 50-mm. f/2 Summar it costs £43, but as the camera body is listed separately, it may be had with the 50-mm. f/3.5 Elmar or any other of the alternative lenses. Further particulars can be had from Messrs. E. Leitz (London) Ltd., 20, Mortimer Street, W.1.

Miniature Camera Gossip

By LANCELOT VINING.

Experiment!

OWNERS of the 35-mm. miniature cameras will never really know the wonderful scope of their cameras unless they experiment from time to time.



In their daily life they will find chances galore, and at a penny an exposure no great harm is done if a few failures do occur. Do you appreciate the extra power provided by the apertures f/1.5 and f/2? Here is just one example; if the correct exposure at f/8 is 1/20th, then the same light would allow you to give 1/550th at f/1.5.

My advice is: Always carry your camera with you whenever possible, and never say, "Oh, *that* can't be done," until you have exposed and developed your film. Carry out a few experiments on subjects you at present think are beyond your camera and I can promise you some very pleasant surprises.

Home Portraiture.

The miniature camera is ideal for photographing very young children in their homes, without having to pose them or cramp their style. This latter is important, for every child has a definite style, which must be given full play, otherwise mother is apt to "sniff" at the results.

My first efforts at this subject were on my doctor's two small sons. It was during the third week of a recent December, and his wife had fixed 3 p.m. as the time of day when the boys were at their best.

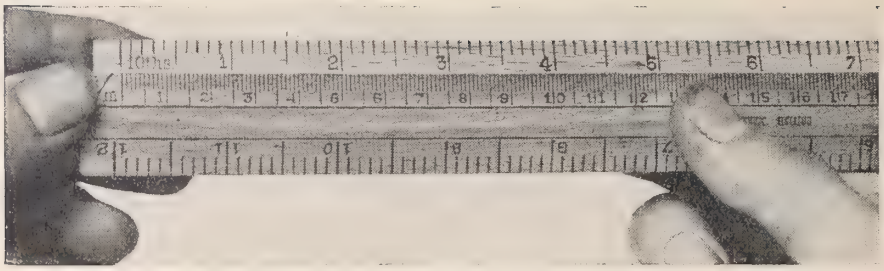
Shadows at the Ice Rink.

There was no daylight of any value, so I turned on all the electric wall lights, and with one photoflood in a standard lamp worked at f/2, giving 1/50th on fast pan. film. The results were a surprise to me. (See illustration.)

Storing Films.

This seems to be one of the problems which has not been solved by the photographic trade, but the need is urgent. I am all against storing films in the tins they were bought in, for every removal leads to some sort of damage. Personally, I cut my film up into threes, throw away the duds and unwanted duplicates, and file the remainder in a special album. The album is foreign-made, much too small, and exorbitant in price.

Room Lighting and one Photoflood.



Now that the miniature has established itself, there ought not to be any great difficulty about placing on the market a really good filing system at a reasonable price. Surely we miniature camera users have been "stung" enough in the past—and I don't suppose many of us will ever forget the first sting.

Shadows.

Most ice rinks run a gala night at least once during a winter season. Take your camera to one of them, and take the chance of trying some indoor speed work. If you have not done this before, you will find it very interesting and worth cultivating. Spot-lights are generally used on gala nights; if they are, make all the use you can of the shadows. (See illustration.)

Miniature Scope.

Spare a minute for the two illustrations in this gossip, and bear in mind the following: Both taken by the same camera, same film, same developer, and both exposed in electric light with the same stop f/2, the one difference being in the focus of the lens. The barrel jump was taken with the 3½-in. Sonnar and the children with the 2-in. Sonnar. For the latter I was three feet from my subject, in the other case I was about 100 ft.

THIS DEPTH-OF-FOCUS BUSINESS

By DAVID CHARLES.

IN changing from a large camera to a miniature, it is extremely useful to know just what depth of focus to expect. To find this we have got to know the "focus" or focal length of any of our lenses in *inches*.

To save arithmetic, get two twopenny school rulers (penny ones if you can), and fix one to the other, as shown in the picture. Then you will see that 5 centimetres is, "as near as makes no matter," 2 inches, and 13 centimetres is about 5 inches.

I will now ask you to bear with me while I explain what I mean by the word "name-stop." I call my 2-in. lens my "Two-inch," that is *its name*. Now my little "Two-inch" has a stop which has the same *sound* as its name. Namely *f/two*. That is its "name-stop." The "name-stop" of my 6-in. is f/six, of my 4-in., f/four, and of my 22-in., f/twenty-two.

The value of that particular (if peculiar) notion of the "name-stop" is this: whatever lens you have been using, whatever lens you ever will use in the near or distant future, if you set it at its "name-stop" it will give you precisely the same depth of focus as any other lens set at *its* "name-stop." My 2-in. set at f/2 gives the same depth as my 6-in. at f/6, and as my 22-in. lens set at f/22. And so will yours, for that is a law that even lens-makers cannot alter. But it only holds good so long as the two lenses you are comparing include the same angle of view. Telephoto and long-focus lenses barred!

So, if you have been using your old quarter-plate reflex with its 6-in. lens at around f/6, and you like the sort of "depth" you get that way, now you have changed to a miniature camera with a 2-in. you can tell at once that you'll get the same effect at f/2. Even if the "name-stop" is not one you are accustomed to, no difficulties arise. Just refer to the accompanying table. Run down the column representing the focal length of the lens you are used to, until you come to a stop-number whose depth-of-focus behaviour you have become familiar with. Then to right or left of it you can read the stop to use to get just that same effect with a lens of any other focal length you are likely to use on a miniature camera.

Any row (left to right) shows the stop number, which gives identical depth of focus to its neighbours according to the focal lengths in the top row.

FOCAL LENGTH OF LENSES IN INCHES.					
	2	**3**	**4**	**5½**	**8**
		1	2 (1.9)	2.9	4
	1	2 (1.9)	2.9	4	5.6
"NAME-STOP."	**2** (1.9)	**3** (2.9)	**4**	**5.6**	**8**
	2.9	4	5.6	8	11
	4	5.6	8	11	16
	5.6	8	11	16	22
	8	11	16	22	32
	11	16	22	32	45

***Fine-Grain Developers* (4).**

THE AGFA METOL DEVELOPERS.

METOL has always been recognised as the very type of soft-working developer. It is, therefore, not surprising that it should find considerable application in miniature photography, where a soft, well-graded negative is desired. A particular advantage of metol is the fact that its Watkins factor is high, thereby ensuring that in cases of minimum exposure all available detail in the shadows will be brought up without danger of clogging the high-lights.

In the formulæ given below, metol is so used as to produce a fine grain.

Agfa Fine-Grain Formula No. 12.

Metol	70 grs. (8 grm.)
Sodium sulphite (anhydrous)	2½ oz. (125 grm.)
Sodium carbonate	55 grs. (6.3 grm.)
Potassium bromide	22 grs. (2.5 grm.)
Water	20 oz. (1,000 c.c.)

Development time: 12 to 15 minutes at 65 deg. Fahr.

Agfa Fine-Grain Formula No. 14.

Metol	42 grs. (4.5 grm.)
Sodium sulphite (anhydrous)	1¾ oz. (85 grm.)
Sodium carbonate	9 grs. (1 grm.)
Potassium bromide	5 grs. (.5 grm.)
Water	20 oz. (1,000 c.c.)

Development time, for super-speed pan. films, 10 to 12 minutes at 65 degrees Fahr.

This formula gives softer results than the preceding.

Agfa Fine-Grain Formula No. 15.

Metol	70 grs. (8 grm.)
Sodium sulphite (anhydrous)	2½ oz. (125 grm.)
Sodium carbonate	105 grs. (12 grm.)
Potassium bromide	13 grs. (1.5 grm.)
Water	20 oz. (1,000 c.c.)

This formula gives rather stronger results than No. 12. Development time, 6 to 8 minutes at 65 degrees Fahr.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

REPEATED USE OF DEVELOPERS.

In advertisements and descriptions of fine-grain developers it is often stated that they "can be used repeatedly." All the photographic textbooks that I have seen lay great stress on the inadvisability of using any developer a second time; how am I to reconcile this contradiction? C. M. (Manchester.)

The older type of developer, of which pyro-soda may be cited as an example, discoloured very quickly if left exposed to the air. The modern fine-grain developer, however, is differently constituted in that it contains, for the sake of giving fineness of grain, a very high proportion indeed of sodium sulphite. This allows these fine-grain developers to be kept almost indefinitely, even after using, with only the most casual precautions against access of air.

In spite of comparative immunity against deterioration by standing, you must remember that when a film or two has been developed the developing agents are to some extent used up. There is therefore a limit to the number of films that a tankful of developer will develop, and extra time has to be allowed when the limit is being approached. The average M.Q.-borax developer should not, we think, be used for more than three films, especially if there is an interval of several days between one occasion of use and the next.

AGITATION DURING DEVELOPMENT.

In the first two or three films developed in a newly-acquired tank I had streaks and markings, though the films were otherwise very satisfactory. A friend told me that these streaks were due to uneven development, and that I should have kept the film moving in the tank during development by turning the spool on which it was wound. I have now developed a film according to this instruction, and, although the streaks are not there, I find that the film is very badly over-developed. I gave the same time, at the same temperature, as before. H. S. M. (Ipswich.)

You have discovered for yourself the fact that the rate of development depends to quite a considerable extent upon the amount of agitation of the film in the developer. If you kept the film moving all the time, instead of leaving it completely stationary, this may have been equivalent to increasing the time of development to double, or even more.

To avoid streaks on the one hand and uncertainty as to the correct time to develop on the other, we recommend that you establish for yourself a routine. Either you can turn the spool practically all the time, or you can turn it, say, six times at equal intervals during the progress of development. With your procedure tied down in this way you will find that a time of development, once satisfactorily found, can be relied upon to be correct for any subsequent film.

SEE-SAW DEVELOPMENT OF FILMS.

For some time I have been developing my films, of 3¼ × 2¼ size, by the well-known see-saw method, and have been perfectly satisfied with the results. Do you recommend me to continue with this method now I have changed to a miniature camera? P. D. (London.)

You do not say what type of miniature camera you have acquired. If it is of the kind using a 36-exposure strip of 35-mm. ciné film, the see-saw method of development is almost impossible, since you will have to deal with a narrow strip of film nearly six feet in length. Besides being too long to handle, its narrowness will cause it to twist uncontrollably.

If your new camera uses the ordinary V.P. size roll film, see-saw development will be practicable enough, but we still would not recommend it on account of the danger of scratching the film against the bottom and sides of the dish, and these scratches will be very evident in your enlarged prints.

In either case we should strongly recommend that you obtain a tank; as you evidently have a dark-room we would suggest one of the dark-room loading tanks as being both cheaper and less complicated than those that can be filled in daylight.

CORRECTION.

Owing to a printer's error, the quantities of sodium sulphite and hydroquinone in the "Buffered Borax" fine-grain developer formula given last week were interchanged. The formula should read: "Sodium sulphite (anhydrous), 2 oz.; hydroquinone, 44 grs." In the metric version of the formula the amounts were correctly printed.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXI.

Mr. CHARLES BUYLE.

From information communicated to our Special Representative.

"I VERY much like knocking about the streets, especially in town. For photography in such places I make use of a Heidoscope, 6 × 13 cm., with two Tessars f/4.5, and as negative material I use Ilford Soft Gradation Pan. I do not readily take my camera out of its case; at the first glance I always know at once if it is not worth the trouble; but if the subject is really interesting and worth while, then I usually take it from all sides and angles many times, in order later on to select and work up the best picture taken.

POÈME DE LUMIÈRE. *Charles Buyle.*

"In my studio I make use of a 13 × 18 cm. camera, and always of pan. material, and have at my disposal three Nitraphot lamps, as well as a spotlight for special effects. I like this work in the studio very much; one is more at one's ease there to go into details when dealing with a subject. I have also some models at my disposal whom I find among the ballet dancers and artistes of the town theatre, or among the mendicants in the streets.

"I usually develop all negatives in standard Rodinal. This gives me thin but very sharply defined negatives, which are retouched and perfected as required.

"For printing paper I use in most cases Gevaert matt and smooth, as this surface facilitates the work. I take a great deal of trouble over the prints. For enlargements I make use of a camera with double condensers and interchangeable lenses—a Tessar 25-cm. for large negatives, or a Tessar 15-cm. for stereo negatives. Sometimes I make use of a soft-focus lens which gives excellent results.

"I have exhibited at most photographic shows, and my prints have been accepted in London, Los Angeles, Paris, Ottawa, Vienna, Prague, Amsterdam, Lucerne, Boston, Chicago, Tokio, Brussels, Antwerp, Toronto, etc. For the Belgian International Exhibition in Brussels 5,000 Belgian photographers were invited to submit their best work, out of which fifty specimens only were shown. With this stringent selection I was awarded the first prize, a gold medal, for the print, 'Poème de Lumière.' This picture has been accepted at seventeen exhibitions.

"I am a correspondent of 'La Photo pour Tous,' Paris, and of 'Die Galerie,' Vienna. I am a great enthusiast in photography, and devote all my spare time to it. I consider a photographers' club to be very useful for beginners, as well as for more experienced photographers, as there is always something to be learned. I am therefore also a member of the 'Association Belge de Photographie et de Cinématographie,' of which His Majesty King Leopold III is the Honorary President and Pierre Dubreuil the President.

"Personally, I prefer a photograph made according to modern views. However, I do not want to have anything to do with ultra-modernism. I consider this to be a kind of fashion which must disappear; but, all the same, it will have done some good for us, because it has taught us to see more."

(*A further example of Mr. Buyle's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"BALLET IN ACTION—BEAU DANUBE," *by Merlyn Severn.*

WITH the advent of the miniature camera and its lenses of extreme aperture, coupled with the use of sensitive material of exceedingly high speed, the range of subject possibilities has been greatly extended, and of such possibilities this picture is an example.

It is, as its title indicates, a study of an actual interlude of a ballet. There is nothing but the stage illumination as ordinarily employed, and, as the figures were in motion, it would have been necessary for an instantaneous exposure to be given. But there is no sign of under-exposure evident in the print, nor is there more than the slightest indication of subject movement. The darks of the man's coat are well modulated; the half-tones of the setting are recorded in their true values; and the distinctions of the lighter tones fully retained, so that the inference is that the exposure was thoroughly adequate. The print, indeed, attains a very high standard, and there is no fault that can be found with the technique.

Such a result could scarcely have been obtained with a larger type of instrument, for, in the first place, and if it be assumed that a lens of equal aperture and an emulsion of similar speed were employed, the absence of an equivalent depth of focus would make itself unpleasantly in evidence by showing the more distant parts of the figures and setting as a blur; and, in the second, if the lens were stopped down to obtain a sufficiency of depth, under-exposure would certainly make an appearance. So that it appears that, where lighting conditions are poor, and moving objects have to be taken into consideration, the miniature camera is invaluable, and it is in this direction that the extension of subject possibilities lies.

In the sphere of the ballet, and also in theatrical performances generally, the positions of each figure in relation to the others, in relation to the setting, and in relation to the limitations of the "frame" of the stage, are most carefully calculated. Consequently, there is, from the point of view of the pictorialist, a succession of well-arranged compositions. Where there are a number of figures, for example, steps are taken to isolate the principals from those of lesser significance, in some cases, by adjustment of spot-lighting, and, in others, by bringing them forward and giving them the advantage of position. Poses are rehearsed repeatedly, and, if more than one performance is attended, it is possible to note, on the first occasion, the times when the most favourable aspects of the subjects are presented, and, on the second, to make the required exposures. Lighting, pose and arrangement are determined by the character of the piece, and are not within the control of the photographer, who is therefore only able to select the moment for making the exposure, the amount to be included, and—to a very limited extent—the point from which they are to be made.

Precaution would have to be taken to avoid such a time when motion is rapid, or, despite the facilities of the miniature, movement of the subject will make an unwelcome appearance, and it will generally be found advisable to avoid scenes where a great number of actors are included; but, apart from these qualifications, the usual problems of arranging the composition, lighting, and so forth, do not exist. Here, the figures are limited to two. The woman assumes the lead, partly because she is more in action than the male figure, and partly on account of the fact that she is shown in brighter tones. Her placing in the picture space, which is one of the things that do happen to be under control, is the stronger, and the fact that she is shown full face while the other is seen in profile is another factor of moment.

The static pose of the man; his position nearer the edge of the print, and the more subdued tone in which he is presented, make him a subsidiary element, but one which, nevertheless, has sufficient attraction to maintain a due share of the interest attaching to the group. The half-tone of the setting is admirably calculated to set off both figures to the best advantage, and, altogether, the moment for making the exposure has been well chosen.

The grace of both figures is delightfully in evidence, and, even if there is a suspicion of indecision in the rendering of the topmost pair of hands, it is such a minor feature that it almost passes notice, and it certainly does not affect the appeal of the work.

A considerable amount of novelty is suggested on account of the rarity with which subjects of this character have hitherto been essayed, and, from the technical standpoint, the work is beyond criticism, which is a tribute alike to its producer, her instrument, and the materials. "MENTOR."

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IT is very much to be feared that there is a certain amount of under-exposure in connection with No. 1 of the prints reproduced on the opposite page—"The View from the Bridge," by C. G. Haining—for the base of the tree bole in the foreground is insufficiently differentiated from the bank from which it springs, and the whole of the shadow tone on the left-hand side is practically devoid of proper gradation.

Distinctions and Differences.

The subject, however, is one of some little difficulty. It is not easy to appreciate, unless the same sort of thing has been encountered before, that, emerging from the open to the shadow of trees, there is a very considerable diminution in the lighting. It comes about so gradually that it is not noticed, and, even if the need for an increase in the exposure time is theoretically understood, it by no means follows that any allowance that may be made will be enough.

It is true that if an exposure meter be consulted, it will give an indication —perhaps astonishing—of the extra time required, but, all the same, it may not be sufficient. It depends on the type and how it is used. If it be of the extinction variety and its use is familiar, and if a reading were taken of the shadow under the root of the tree, it is not unlikely that its indication would be sufficiently accurate to avoid any marked degree of under-exposure; but if it be of the light-measuring type, whether by means of a bit of sensitive paper or a photo-electric cell, an allowance would have to be made both for the proximity of the shadow and for the fact that the meter would be influenced by the lights of some intensity in the near vicinity.

Experiment would show that, to get the needed distinctions in the shadows, something like three to four times the meter reading would be required, an amount that represents quite a considerable difference, and one that would not be likely to be foreseen.

Maxims and Meters.

That is not to say, of course, that any one type of meter is better than another, for it is necessary, whatever the type, to establish a relationship between its indications and the sensitive material employed before it can be relied upon.

If, after making a series of exposures on a particular setting, it is found that all the negatives are much too dense and most of the high-light modulation is lost, the inference is that they are over-exposed and that the speed of the sensitive material has been underestimated. On the other hand, if the shadow tones or darks are represented by clear patches without any silver deposit, it is a clear indication of under-exposure and the meter will require setting to a lower speed number.

Now, although any modern type of meter may be regarded as pretty accurate, no single instrument has yet been designed that can cope with every possible variety of subject. The extinction type has the advantage when low light values are encountered. The photo-electric meter is very speedy and convenient in use, but is limited in range, and requires some care in making allowances when subjects of extreme contrast are met with; while those depending on light-sensitive paper are subject to similar drawbacks, are slower in giving a reading, but are rather wider in their scope.

Points to Remember.

With the extinction class of instrument, some allowance has to be made for eye accommodation, and, with either of the varieties that measure the light values, adjustment has to be made according to the nature of the subject.

No. 1 would require an increase, as previously mentioned, over the meter reading. With a subject like No. 2, "Flood-lighting," by B. A. Murdin, the indication could be reduced by half. Nos. 3 and 6, "At the Moorings," by George Ancock, and "A Country Pathway," by H. Hastings, would need somewhere about double the meter reading, and No. 5, "The Thames," by H. J. Salkeld, could be regarded as normal and would not need any adjustment.

No. 4, "Eventide," by A. W. Thynne, is of much the same character as No. 2, and a similar adjustment would be advisable. With No. 2, however, the indications are that the exposure was fully adequate. The beauty of the tone values and the prevalence of half-tone not only show that the exposure was correctly judged, but that the subsequent technical treatment was equally well managed. The effect too, is not without a measure of pictorial attraction, and, altogether, the print attains a higher level than any other on the page.

Technical Treatment.

With No. 4 there appears to be a measure of over-development of the negative having regard to the grade of paper on which it is printed. In the absence of the negative, it is impossible to say whether under-exposure is also present or not, but the excess of contrast could be corrected by the substitution of a paper of a softer type, i.e., as far as it arises from over-development of the negative or the unsuitability of the printing paper.

"At the Moorings," is somewhat too dark all over and seems to display a measure of over-printing. The probability is that a lighter print would reveal better tone values.

Somewhat similar remarks, except with regard to the depth of printing, apply also in the case of No. 5, and, judging from the blankness of the sky, it seems probable that a softer grade of printing paper would afford a better tonal rendering.

Compositional Adjustments.

It will be observed that, in this example, the most prominent element of the picture—the tower on the left—is placed almost on the left-hand edge. The arrangement seems very lopsided, and, in a case like this, it would have been wiser if the tower had been brought more into the picture.

"A Country Pathway" shows a not inconsiderable advance in technique, for there is quite a fair amount of gradation both in lights and darks, nor is there any indication of an inadequate exposure. The composition, however, suffers from an excess of foreground and from the cutting off of so much of the upper portion. The addition of three-quarters of an inch to the top and the removal of a similar amount from the base would improve matters appreciably.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

THE VALUE OF "ATMOSPHERE."

STRICTLY speaking the atmosphere means nothing more than the mass of air surrounding the earth; but we use the word in a special sense when we speak of the "atmosphere" or the "atmospheric effect" in a picture. In certain cases the air may be quite clear and transparent, so that we can see plainly objects at great distances—visibility good. But in other cases, the air holds moisture in the form of haze, mist or fog, with or without the addition of dust and smoke—visibility fair, moderate or bad.

In photographs or other graphic representations we have to show three-dimensional objects on a single flat surface, and we have learnt to read into these conventional representations both solid forms and distances. The idea of form and solidity is assisted by light and shade, and the idea of distance by relative sizes; but the idea of distance is further aided by "atmosphere." Distant objects are always smaller in scale than when they are at close quarters, but the illusion is assisted when they are also more vague in form and detail, and lighter in tone.

Fig. 1.

All this is shown clearly enough, for example, in Fig. 1. We have no difficulty in realising that the nearer boat, the farther boat, the cliffs on the left and those on the right, came in that order at increasing distances. In Fig. 2 the individual leaves of the nearer trees are clearly and strongly defined; those of the distant trees are massed into vague light tones; similarly with the figures. The idea of distance is emphasised by the effect of "atmosphere."

In some cases the clearer the air the better it is for our purpose; but in other cases, especially in "pictorial" effects, the presence of more or less haze is a valuable asset. We can often, to a greater or less extent,

Fig. 2.

"cut out" the atmosphere by resorting to the use of a suitable filter. The extreme limit is reached by adopting the infra-red process, but only at the cost of completely falsifying some of the colour values.

The effect of mist is to alter the tone values, so that what we have to aim at is rendering these tone values as correctly as possible by means of appropriate exposure and development.

In Fig. 3 I not only tried to take advantage of the luminous haze prevailing, but I had (for once) an idea which I hoped to express. Probably most of those who notice the man will merely remark that he is none too well placed in the picture space. But what I had in mind was that it was little insignificant man who ploughed and sowed and reaped the field; who planned and built the house; who quarried the distant hill. For such a speck in a vast universe he performs many wonders. Alas, I realise that the print does not convey my idea at all. Well, 'tis better to have tried and failed than never to have tried at all.

I need hardly remind you that this is a fine time of the year for "atmosphere," which tends to be ladled out at times with disconcerting liberality. Nor need I remind you that many "poor visibility" subjects are of considerable pictorial value, and that you should keep your eyes open and your camera ready.

Fig. 3.

There are no special difficulties about photographing such subjects, nor is there any need for panchromatic material and filters. In many cases there is a general tendency to grey tones, and there is not such great contrast of tones as in brighter lighting. Personally, I should use any ordinaryort ho film or plate, without a filter. If there is one thing more than another to guard against it is over-development, which would spoil the range of light tones which are so important. When different kinds of subjects, including the "atmospheric" ones, are on the same spool it is of course awkward to allow for reduced development time unless the spool is cut up as soon as the sections are distinguishable. W. L. F. W.

"The A.P." Monthly Competitions

PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.

FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon (see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

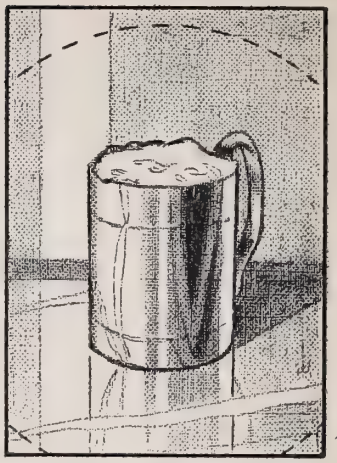
(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

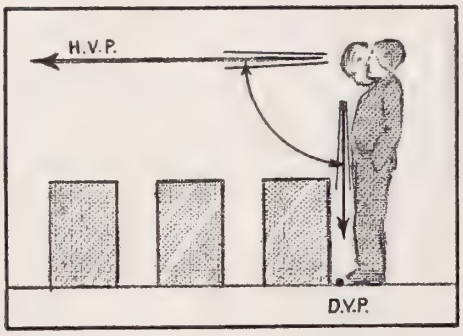


(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

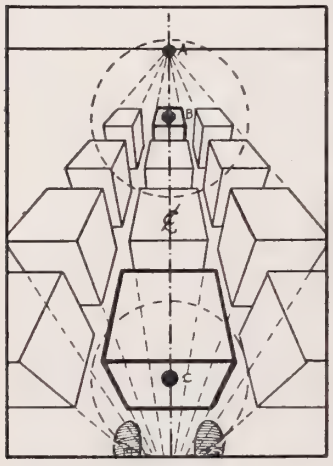
(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the November competition is Monday, November 30th, and for the December competition, Thursday, December 31st.

Picture Points



No. 27 (New Series) *by RICARDO*



The Fundamentals of Perspective.

THE principles of perspective concern the artist more than they do the photographer, mainly because the artist has to *visualise* the whole effect before he can construct a single line, whereas the camera can only portray what it sees and promptly settles the "drawing" of the subject matter or perspective.

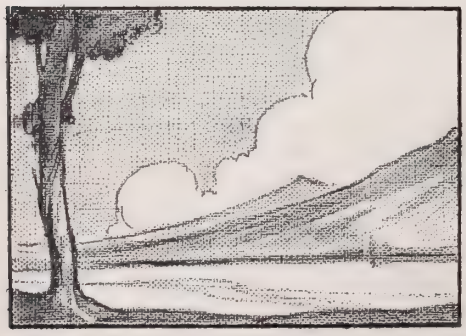
In last week's "Picture Points" it was shown that even so-called "verticals" have a vanishing point just as much as the horizontals, and that the nearer we are to any subject so do the contours converge more sharply.

A better understanding of this point can be gained by studying the first two sketches. The first illustration is a side view of a series of rectangular pillars, equal in shape and at an equal distance apart. The horizontal line of sight is shown leading to the horizontal vanishing point (H.V.P.), again shown at A on the second sketch. At the feet of the figure the downward vanishing point (D.V.P.) is shown at right angles to the horizontal line of sight. This point is a little below the base-line on the second sketch.

As the eyes sweep down from the horizontal to the feet, they follow the centre line (C.L.).

All the horizontal lines which are normally *parallel* on the ground to this centre line converge or vanish towards the H.V.P., while all *verticals* vanish towards the D.V.P. This is the inflexible rule of perspective. There are other vanishing points but they do not concern us at the moment.

The second sketch seems strange because of the distortion of the nearer objects and because of the extreme wide angle of sight specially drawn to include these two vanishing points. It is because of this wide angle of sight or "field" that it looks unusual, for the eye can only see objects in sharp detail for a few degrees while the eye is in a fixed position. For example, if we were to look at the point B, the pillar in heavy outline would be sharpest, while the surrounding pillars would get less sharp as they approached the dotted circle. Again, if we fix the eye on the point C in the foreground only those lines nearest this point would be sharp, while the others again would soften or be diffused as they bordered nearer the dotted circle.



If, however, the eyes are moved to the left or right the vanishing points remain in the same position, but the objects that come in the centre of our line of sight immediately become *vertical*, and it is this fact that causes so much argument on the point of perspective. The camera sees all objects exactly as the eye *in a fixed position* sees them, and if we photographed them at a very large aperture, such as f/1 or even larger, then the print would represent the subject correctly, provided the eye were fixed in the right position on the print, and not allowed to wander from corner to corner. *(To be continued.)*

Opposing Lines.

ONE of the most useful devices for maintaining interest in the picture as well as for preserving balance, is that of including opposing lines.

If we have a number of lines all going in the same direction, especially when they are converging, there is a strong tendency for the eye to follow the lines, and should they go right to the edge of the print then there is strong competition between them and the main point of interest. To counter this, we can invariably place some form of tone, either in the composition of the subject matter or in the printing, on or near the converging lines so that it will stop and coax the eye back again into the picture.

In the left-hand sketch we have a very simple example. If the tree were missing there would be a tendency for the eye to follow the lines of the clouds, hills and lake to the left, out of the picture, but as it now stands, the tree acts as an opposing line and so helps to maintain the interest inside the four edges. Another example is seen on the right.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Street Photography at Night

By "NIGHTWATCHMAN."

PHOTOGRAPHS of night subjects never fail to create interest in the artistically minded, and now that the short days are here the amateur photographer can lengthen them by turning his attention to photography at night. Success depends largely upon patience, but the resulting photographs will repay the photographer for the time and care taken.

Perhaps those readers who live in the large towns and cities are more fortunate than their country brethren, but in these days of modern transport this is really no obstacle, for there are not many places which are not reached by bus or train.

The majority of cameras are suitable for night work providing the amateur does not exceed the limitations of his instrument and expect the impossible. I have seen some excellent night studies taken with a simple box camera which, when compared with some photographs taken with an expensive camera, showed no distinguishable difference. So long as the subjects permit of a long exposure, there is, after all, no reason why the cheap camera should not do the work perfectly. Naturally, ease of working is obtained by using a camera with a large-aperture lens, a rising and cross front, focussing screen and a lens hood to cut out extraneous light.

A firm tripod is essential for lengthy exposures and to avoid vibration. The photographer will find that a pocket torch is a very useful accessory when setting the shutter and altering the lens aperture in dark corners.

In the matter of exposure, which is perhaps the most difficult problem of night photography, it is impossible to lay down any rules. A few experimental "shots," together with the suggestions made in these notes, will give a rough idea of the exposures required.

Night photography covers a wide field and it is impossible to deal with the subject in one article, but street work is one of the most popular branches.

Londoners are probably the most favoured of all in the wide range of subjects available in their vast, well-lighted city. All round theatreland subjects can be found in plenty. Many of the theatres—and other buildings, too—are so brightly lit up and outlined by blazing signs of all shapes and colours that the exposure necessary to photograph them is no more than a quarter of a second or so at f/3.5, when using the fastest available films.

In and around the entrances to many theatres and cinemas there is so much light that, with care in choosing the instant of exposure, quite amusing "snapshots" of the queue waiting for the cheaper seats, or of the ticket-buyer choosing his seat or inspecting the "stills" outside the cinema may be made. Slow snapshots they will have to be, of course, but with patience, and some waste of film, they can be made.

Regent Street at Night.

For all these figure subjects a good basis of exposure is ¼ second at your widest aperture. The negatives will be under-exposed in parts; but then every night photograph is. Try one or two, in the brightest places, at 1/25th. Naturally, they will be more under-exposed—but print them all the same. As negatives, they may be shocking ghosts, but the prints will certainly be better, and may be good.

When operating in the streets and using a tripod, care must be taken to avoid causing obstruction. In some towns and parts of London a permit is required to use a tripod, but you will find that it is often possible to work from the doorway of a closed shop.

Wet nights provide excellent opportunities to secure pictorial effects. The reflections of the lights and of the signs in the otherwise dark street prevent this, even with a short exposure, from appearing as a blank expanse. Figures, traffic, islands with their posts, and even the edge of the pavement stand out quite clearly in silhouette against the lighted road. Exposures round about ¼ second at f/4.5 become adequate, where with a dry road five or ten times as long might have been needed. The longer exposures necessitated by dry streets are inclined to lead to very heavy over-exposure of such naked lights as are included in the picture—with the odd result that one can claim that wet streets are a cure for halation.

In street scenes you must beware of bright lights, such as the headlights of passing motor cars, shining into the lens.

As most readers know, these will have lines of light showing where their image has passed across the film. If it is necessary to make a long exposure—and, away from the brilliantly-lit centre of the West End, it usually is—the shutter must be closed whenever a vehicle with bright headlights looks like entering the field of view. Often a minute's exposure has to be made up of six ten-second instalments; be careful not to lose track of the total time.

Away from the brightly-lit areas night photographs of a rather different type can be made. The corner of a quiet street or square, with the portico of an old house picked out by a near-by street-light, often makes a charming picture. If it is possible to arrange that the light, although within the picture, is shielded from the lens by a tree-trunk, the corner of a house, an inn sign, or even a carefully posted figure, some very effective pictures may be made. Studies of this type are usually much enhanced by being taken on a slightly misty night; the reflection of the light on the mist makes the lamp look as if it really were a source of light and not merely a white patch on your print.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Hammersmith Hampshire House Photographic Society is staging an informal supper on Friday, December 11th, to celebrate the attainment of over 250 members—a total that is the highest in the Society's history. H.H.H.P.S. has always been a live and growing society, but the rate of growth has never been more marked than at the present time. Over a recent period the net gain in membership was 50 per cent greater than the highest previously recorded for the same period. New members are particularly enthusiastic, and we hear that the number desiring to take the beginners' classes is almost embarrassing to the secretary. A big attendance is expected on December 11th.

A new Kodachrome film, known as Type A, is now available. It is specially intended for use with Photoflood and half-watt lighting, with which no filter is needed for correct reproduction of colours. It is therefore considerably faster to this light than standard Kodachrome film, which requires a filter in artificial light. It should be noted that the new Kodachrome A gives incorrect colour rendering by daylight unless a special filter is used.

The Eighth Western International Salon will be held at Bristol from February 20th to 27th, 1937, and later will be transferred to Weymouth. Besides the usual open classes, there are to be special classes for novices, and for press and professional photographers. Full details, together with entry forms, can be had from the Salon Secretary, Mr. W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

Messrs. Ensign, Ltd., of High Holborn, London, W.C.1, have just published a new catalogue of their 16-mm. ciné cameras, projectors and accessories, under the title "Ciné for the Amateur." They have also issued up-to-date lists of the 16-mm. and 8-mm. films that they offer for sale to those who are amassing a library of films. Any or all of these can be had on application to Messrs. Ensign, Ltd., or a photographic dealer.

Messrs. M. W. Dunscombe, Ltd., Bristol, Sole Trading Distributors for the Ampro Corporation throughout the United Kingdom and Ireland, send us a copy of their new and enlarged illustrated catalogue giving full specifications of the Ampro range of 16-mm. motion-picture equipment designed for amateur and professional use. The catalogue is unique inasmuch as the whole construction of the machines is fully explained and illustrated, which will appeal to those who appreciate high-class precision technicalities. All important dealers are supplied with catalogues and will be able to stock and sell Ampro precision-built motion-picture equipment.

The winner of the Wallace Heaton Open Competition for the week ending November 14th, is Mr. R. D. Hughes, of 9, Hollin Park Road, Roundhay, Leeds, 8, to whom an award of 21s. has been made. Full particulars regarding this competition appear regularly each week in our advertisement pages.

Stolen.—From Cambridge Union Society or from rooms in Corpus Christi College, between October 24th and 31st, Nagel Pupille Camera No. 2420340, lens No. 101856; distinguishing marks: special clip for range-finder on underside of camera, loose mirror in view-finder. Reward for recovery is offered by Mr. B. I. Hunt, Corpus Christi College, Cambridge.

The Foth-Flex twin-lens reflex camera, giving pictures 2¼ in. square and fitted with an f/3.5 lens has been available for some time at £10 7s. 6d. A new model fitted with a Foth anastigmat lens of aperture f/2.5 has just been announced at a price of £13 10s. Like the older model, the focal-plane shutter gives a full range of speeds from 2 secs. to 1/500th, and has a delayed-action movement. Both models are obtainable from Messrs. Peeling & Van Neck, 4–6, Holborn Circus, E.C.1.

A handy little lantern-slide printing outfit has been sent us by Ensign, Ltd. This contains all the additions to his normal equipment that the photographer embarking for the first time on the making of slides is likely to require. It contains a 3¼-in. square printing frame, fitted with a glass and a set of interchangeable masks for the sizes 2¼-in. square, 4.5 × 6 cm., and 24 × 36 mm. The frame has guides for 35-mm. film for the convenience of the users of the smallest size mentioned. There is also a set of twelve combination cover-glass and spot binders. These consist of cover-glasses with binding-strips and spots ready attached, so that the slide merely has to be dropped into position and the strips gummed down. For masking the individual slides a packet of twelve masks in any of the sizes just mentioned is included in the outfit, which may be had from Messrs. Ensign, Ltd., High Holborn, London, W.C.1, for the sum of 5s. 6d. complete.

Readers are reminded that the Scottish Travel Association, of 2, North Charlotte Street, Edinburgh, 2, maintains a library of 16-mm. scenic films. This winter again these films will be available for loan, gratis, to bona fide amateur cinematographers and film clubs. Additions to the collection this year include a film showing a holiday in a motor yacht, one each on grouse shooting and deer stalking, and two in colour (Kodachrome) of the City of Aberdeen and the County of Stirling respectively. The only charge made for these films is for postage at the rate of sixpence for one reel, sevenpence for two and eightpence for three. A complete list of the films may be had on application.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5 × 3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5½ × 3½ × 3 and each is supplied complete with a list of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Prices 2s. 6d. post free.

51. FLASHLIGHT.

THE ordinary rules for portraiture in daylight apply to portraiture by flashlight so far as arrangement of sitter, camera, angle of lighting, and reflectors are concerned.

Factors to be considered in flashlight work are: the amount of light employed, its nearness to the subject, and the tone of the general surroundings which may reflect light.

The main source of illumination (as more than one light may be used at times) should always be placed as high up as possible and arranged so that the angle of light is about 45 degrees with the head of the sitter. There are several good flash-lamps on the market for use with flashpowder, and one of these should be used. All of them embody the idea of applying a flame or spark to the mixture, which ignites instantaneously.

Flashpowders are obtainable ready made, and these with the makers' instructions that accompany them are recommended to all who attempt flashlight for the first time.

The following is a useful, home-made flashpowder, but it should be remembered that all flashpowders are more or less explosive and should, therefore, be handled with care:—

Sift dry magnesium powder (3 parts) on to a sheet of dry warm paper. Powder potassium chlorate (6 parts) and antimony sulphide (1 part).

Separate to the finest powder and sprinkle over the magnesium. Mix either with a feather or shake together lightly in a cardboard tube. 10 grs. will burn in about 1/30th of a second.

The following table gives approximate quantities of flashpowder required for fast panchromatic film or plate with stop f/8.

RELATIVE SIZES OF ROOM, MEDIUM LIGHT WALLS.

Distance of Main Object. Feet.	Length. Feet.	Breadth. Feet.	Height. Feet.	Grains required.
9	15	6	10	15

"The Amateur Photographer" ANNUAL LANTERN-SLIDE COMPETITION

THE following are the awards in our Annual Lantern-Slide Competition. As mentioned in last week's issue, a record number of slides were sent in this year and the standard was particularly high, very few of poor quality being entered. In addition to those winning Silver and Bronze Plaques and Certificates as given in the following lists, a number of others were purchased, making the total for the exhibition set up to 160. These have now started on their tour round the societies. The collection is fully booked up until May, 1937, and will be seen by thousands of amateur photographers in all parts of the country.

CLASS I. LANDSCAPE, WITH OR WITHOUT FIGURES, SEA SUBJECTS AND RIVER SCENERY.

SILVER PLAQUES.—"Down from the Hills," by R. W. A. Burgess, Ben Bhan, 193, Dimsdale Parade, Wolstanton, North Staffs; "Threshing-time," by H. C. Hickman, 15, Belmont Road, Southampton.

BRONZE PLAQUES.—"Mountain Grasses," by T. G. Earp, 14, Brushfield Street, Hyson Green, Nottingham; "The White Sail," by C. D. Milner, 33, Westgate, Hale, Cheshire.

CERTIFICATES.—"The Mountain in the Sky," by Miss E. A. Crouch, 96, Boleyn Road, Forest Gate, London, E.7; "Into Sutherlandshire," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester, 8; "Purity," by Arnold T. Bailey, 21, Priestfield Avenue, Colne, Lancs; "One Fine Day," by W. Gregory, 13, Plumbley Drive, Manchester, 16; "Jolesfield Mill," by R. W. T. Collins, Woodlyn, Shakespeare Road, Worthing; "In Lakeland," by Victor E. Morris, Wellington House, East Grinstead, Sussex; "Lady of Avenal," by H. Rawcliffe, 687, Fair View, Linthwaite, Huddersfield; "On the Starboard Bow," by Ernest A. Penny, Holmedene, Clifton Road, Millbrook, Southampton; "The Mill at Hambledon," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8; "Stern View," by Peter Hennessey, Park Cottage, Netherton, Newton Abbot, S. Devon; "Hollentalklamm—Near Garmisch," by Albert E. Price, 34, Brockley Park, Forest Hill, London, S.E.23; "The Limited," by A. V. Bibbings, 58, Queen Street, Newton Abbot; "Night at Westminster," by H. Cartlidge, 56, West Grove, Hull; "Sulphelle Glacier—Near Mundal, Norway," by Mrs. Wraith, 41, Branksome Wood Road, Bournemouth; "The Chapel in the Snow," by P. B. Jenkins, c/o Hammersmith Hampshire House P.S., Hampshire Hog Lane, London, W.6; "On the Wallen Alp," by J. F. Cutler, 52, Gibbs Green, Edgware, Middx.

CLASS II. PORTRAITURE AND FIGURE STUDIES, WHETHER INDOOR OR OUTDOOR PICTURES.

SILVER PLAQUES.—"The Sentinel," by J. G. Phimister, 11, The Mall, Ealing, London, W.5; "Self-Portrait," by H. Bryce Thomson, 2, Belmont Grove (Off Clarendon Road), Leeds, 2.

BRONZE PLAQUES.—"The Centenarian," by A. V. Bibbings, 58, Queen Street, Newton Abbot; "Got it!" by A. B. Bishop, 36, King Road, Knowle, Bristol, 4.

CERTIFICATES.—"Dawn Yet?" by D. G. Wraith, 41, Branksome Wood Road, Bournemouth; "Me and my Shadow," by G. C. Backhouse, 16, Sandhurst Grove, Harehills Lane, Leeds; "The Deer Stalker," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester, 8; "Playmates," by Fred Lord, Alandale, Crabtree Lane, Harpenden, Herts; "Two's Company," by C. D. Milner, 33, Westgate, Hale, Cheshire; "Catch That One!" by Miss E. A. Crouch, 96, Boleyn Road, Forest Gate, London, E.7; "Resting," by Leslie H. Openshaw, 22, Parklands Drive, Broughton, Preston, Lancs; "Draughts," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8; "Pengelly, Driver G.W.," by F. J. Zenas Carter, 12, Beaconsfield Street, Leamington Spa; "Knife Grinding," by R. Kermode, 80, Cambridge Road, Southport, Lancs; "Sunshade," by Stanley H. Clarke, 20, Glen Eldon Road, Lytham St. Annes, Lancs; "Welcome Shade," by S. D. Barnwell, 101, Sandon Road, Stafford; "Solitude," by J. G. Phimister, 11, The Mall, Ealing, London, W.5; "E. C. Sykes, Esq.," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8; "Here's the Best," by D. G. Wraith, 41, Branksome Wood Rd., Bournemouth.

CLASS III. ARCHITECTURE, INTERIOR AND EXTERIOR.

SILVER PLAQUES.—"Old Menton," by R. Kermode, 80, Cambridge Road, Southport, Lancs; "Old Doorway—Norton-in-Hales," by William Cliff, Longfields, Eleanor Crescent, Newcastle, Staffs.

BRONZE PLAQUES.—"The Water Butt," by H. Bryce Thomson, 2, Belmont Grove (Off Clarendon Road), Leeds, 2; "St. Paul's," by Allan P. Morris, 81, Ainsworth Road, Radcliffe, Lancs.

CERTIFICATES.—"The Four Dauphins Fountain—Aix," by R. Kermode, 80, Cambridge Road, Southport, Lancs; "The Refectory—Caldey Abbey," by G. G. Hoare, 205, Moor Green Lane, Moseley, Birmingham, 13; "Sunshine Cottage," by A. H. Lucas, 317, St. Saviour's Road, Leicester; "At Appletreewick," by Edward C. Sykes, 2, Newlands Avenue, Whitefield, Near Manchester; "South Doorway—Tewkesbury Abbey," by Victor E. Morris, Wellington House, East Grinstead, Sussex; "An Old House—Limburg," by L. W. Offord, 18, Chesham Road, Kemp Town, Brighton, 7; "12th Century Wood Carving, Tjugum Church, Norway," by Samuel J. Beckett, Pineville Hotel, West Cliff, Bournemouth; "Meditation," by Miss Anne Jackson, 61, Richmond Grove, Manchester, 13; "Chateau de Chillon, Montreux," by R. Cook, The Coppice, Cromwell Road, Fulwood, Preston, Lancs; "Sunshine Alley," by Cyril E. Edgar, 40, Shardeloes Road, London, S.E.14; "The Paley Pulpit, Carlisle Cathedral," by Edward Steel, 16, Clifton Street, Carlisle; "Caernarvon Castle," by E. Dodshon, Durham House, 124, Old Christchurch Road, Bournemouth; "The Font," by Thomas Woods, 7, Easedale Road, Heaton, Bolton; "B.B.C.," by Hubert Henshaw, 149, Clarence Street, Bolton.

CLASS IV. FLOWERS, FRUIT, AND OTHER "STILL-LIFE" SUBJECTS.

SILVER PLAQUE.—"Laburnum," by Samuel J. Beckett, Pineville Hotel, West Cliff, Bournemouth.

BRONZE PLAQUE.—"A Window in Blanchland, Northumberland," by John Hume, 61, Jesmond Dene Road, Newcastle-on-Tyne.

CERTIFICATES.—"Pageantry," by R. C. L. Herdson, 88, Elfindale Road, Herne Hill, London, S.E.24; "Window Ledge," by T. Raybould, 6, Willows Road, Walsall, Staffs; "Mimosa," by W. Gregory, 13, Plumbley Drive, Manchester, 16; "Double White Achillea," by Clarence Ponting, The Little House, Pangbourne, Berks; "Orange-juice," by D. G. Wraith, 41, Branksome Wood Road, Bournemouth; "Legato," by J. G. Phimister, 11, The Mall, Ealing, London, W.5; "Syringa," by Fred Lord, Alandale, Crabtree Lane, Harpenden, Herts; "Glass," by E. B. Marks, Aalsmeer, Regent Street, Stoke-on-Trent, Staffs.

CLASS V. NATURAL HISTORY SUBJECTS.

SILVER PLAQUES.—"Victor," by Edward C. Sykes, 2, Newlands Avenue, Whitefield, Near Manchester; "Group of Puffins," by H. S. Thompson, 89, Tynemouth Road, Newcastle-on-Tyne, 6.

BRONZE PLAQUES.—"Peregrine Falcon at Eyrie," by Arthur Brook, Market Street, Builth Wells, Breconshire; "Female Yellow Wagtail at Nest," by G. B. Kearey, 2, Thomas Street, Crumpsall, Manchester, 8.

CERTIFICATES.—"Male Lions (Whipsnade)," by H. S. Thompson, 89, Tynemouth Road, Newcastle-on-Tyne, 6; "Nesting Time," by Thomas Woods, 7, Easedale Road, Heaton, Bolton; "Siesta," by R. W. A. Burgess, Ben Bhan, 193, Dimsdale Parade, Wolstanton, North Staffs; "Ducks," by Ernest W. Chadwick, 12, Linden Avenue, Dewsbury Road, Leeds, 11; "Eagle Owl," by B. Garth, 38, Church Street, Smedley Lane, Manchester, 8; "Rover," by A. B. Bishop, 36, King Road, Knowle, Bristol, 4; "Sandpiper at Nest," by Horace Swindlehurst, 1, Herbert Street, Padiham, Burnley, Lancs; "Tigress," by C. D. Milner, 33, Westgate, Hale, Cheshire; "Griffon Vulture," by Miss Anne Jackson, 61, Richmond Grove, Manchester, 13; "Home of the Thrush," by Henry Riley, Brantwood, Manchester Road, Westhoughton, Near Bolton, Lancs.

CLASS VI. LANTERN SLIDES IN COLOUR (*Not Hand-coloured*).

SILVER PLAQUES.—"Moorland," by H. Foscutt, 19, Doncaster Road, Leicester; "Silver Solitude," by J. H. Clark, 304, Camberwell New Road, London, S.E.5.

BRONZE PLAQUES.—"Over the Hill," by R. M. Fanstone, 16, Palmerston Street, Romsey, Hants; "Ancient Egyptian Temple," by A. Talbot, 51, Harold Road, Upper Norwood, London, S.E.19.

CERTIFICATES.—"Sunshine at Raglan," by Miss M. Wight, Mordiford, Hereford; "Fishers We," by H. Ellerton, 56, High Street, Newchapel, Stoke-on-Trent, Staffs; "Here in the Quiet Hills," by H. Foscutt, 19, Doncaster Road, Leicester; "Birch," by J. H. Clark, 304, Camberwell New Road, London, S.E.5; "A Find," by R. M. Fanstone, 16, Palmerston Street, Romsey, Hants; "Woods in Autumn, by Miss Isobel Simpson, 369, Blackness Road, Dundee; "An Autumnal Scene," by A. Talbot, 51, Harold Road, Upper Norwood, London, S.E.19; "Anemones," by George S. Harrison, 29, St. Mary's Parade, Lancaster.

CLASS VII. CHAMPION CLASS. *Open only to those who have won Silver or Bronze Plaques in "The Amateur Photographer" Lantern-Slide Competitions.*

"Laburnum—A Decorative Panel," by Samuel J. Beckett, Pineville Hotel, West Cliff, Bournemouth.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

DUFAYCOLOR FOR SUNSETS.

SIR,—In the November 11th issue of "The A.P." L. C. (London) wants to know how to make sunset pictures on Dufaycolor. Perhaps my own experience will help him.

I did many successful pictures of sunsets, processed by Dufaycolor, and found quite correctly exposed by the firm.

I used the Avo II electric exposure meter. The leaflet suggests 400 H. & D. speed for the preliminary setting; this gave me 1/25th sec. at f/4. I used it for the first snap, and for experience, immediately after, leaving f/4, I tried 1/10th sec. for the same view (both being taken within 30 seconds). Then I returned to 1/25th sec.

When I received the film processed, all snaps were excellent, no difference at all could be found for the two different exposures. I used another spool in the same way, and now I have 18 excellent sunset pictures (9 on each spool with Rolleiflex 6×6).

In this little collection I have sunsets with or without sun in the picture, brilliant clouds and dark ones, and the remarkable thing is that the blue parts of the skies are very correctly blue, and everyone knows that blue is the most difficult colour to render correctly in colour photography.

I may add that the pictures make excellent lantern slides.—Yours, etc.,

CH. REY, S.J.

(Director St. Louis Observatory, Jersey.)

A SILVERED REFLECTOR.

SIR,—A contributor has already suggested making a reflector by saving pieces of tinfoil and pasting them on a sheet of cardboard. However, collecting suitable pieces of tinfoil, free from tears and crinkles, may be a longish job, and a more uniform surface, if not quite so brilliant, may easily and quickly be obtained by purchasing penny sheets of silvered paper from a stationer's. Two such sheets will suffice to cover a sheet of heavy cardboard, the largest size obtainable, 25×30 in., and costing only a few pence. After pasting the silvered paper on the cardboard the job may be finished off by binding the edges with passe partout. This reflector is much more efficient than white cardboard or cloth, and amply repays the small cost and time spent in making it.—Yours, etc.,

C. P. SINGLETON.

WHAT IS A MINIATURE CAMERA?

SIR,—I was very interested in the article that appeared in *The Amateur Photographer* of November 4th, on miniature cameras: "What is a Miniature Camera?"

In this article you tend to define miniature cameras by the size of the picture obtained, giving as upper limit 6×6 cm. (2¼×2¼ in.). I find that it would be much better to define them by the focal length of the normal lens employed.

By "focal length of the normal lens employed" I mean that of the lens fitted on the camera for all-round work, that being of 9-cm. for the 6×6 cm. films, 7.5-cm. for the 4.5×6 cm. ones, and 5-cm. for 24×36 mm. pictures on 35-mm. ciné film, excluding the use of all telephoto or wide-angle lenses.

Therefore, the focal length of the normal lens used for a 6×6 cm. picture being 9-cm., that would be the maximum normal focal length allowed on miniature cameras.

This does not mean that a picture taken with a 15-cm. telephoto lens is not a miniature, so long as the dimensions of the negative do not exceed 6×6 cm., as the focal length of the normal lens employed does not exceed 9 cm.

In "What is a Miniature Camera?" it was queried whether pictures taken on portions of larger negatives and subsequently enlarged, should be considered of miniature size or not.

The above-mentioned definition excludes all pictures taken on 6×9 cm. film and upwards, unless the camera is specially constructed for taking sixteen 4.5×6 cm. pictures or twelve 6×6 cm. ones per spool of 6×9 cm. film.

I most strongly defend this definition, as the technique of a picture taken with a miniature camera is entirely different from that used when taking the same picture the same size on a portion of larger film with an ordinary camera. The focal length of the former camera lens being much shorter, the camera will be placed much nearer the subject, if this is not at infinity, and a different perspective will more than likely ensue. If the subject is at infinity it is impossible to obtain the same size picture on a miniature negative as on a portion of a larger film taken with an ordinary camera (using in both cases the normal lens).

I therefore think that if the miniature camera is to be kept to a class by itself, all pictures that do not fulfil the above-mentioned conditions should not be classed as miniatures, else one day we may see corners of whole-plate negatives exhibited as miniatures.—Yours, etc.,

R. SCHAUFFELBERGER.

Exhibitions and Competitions CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, November 30. Rules in this issue.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

Eighth International Photographic Salon of Japan.—Open, November (Tokyo and Osaka). (Sec., International Photographic Salon, Tokyo, Asahi, Shimbun, Tokyo, Japan.)

The Third Yorkshire Salon, 1936, at Mortimer Gallery, City Hall, Hull.—Open, October 31–November 30. (Graham Fletcher, Netherlea, Kirk Ella, East Yorks.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Borough of Ealing Public Libraries Photographic Exhibition and Competition.—December 9–10. Open to all residents in the Borough. (M. L. Hodges, Librarian, Hanwell Public Library, London, W.7.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Open November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Entries, December 15; open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Western Eighth Annual Salon of International Photography.—Entries, February 1; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

Birmingham P.S. 46th Annual Exhibition.—Entries, February 6; open, February 27–March 13. (E. H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9; exhibits, March 1; open, March 3–6. (Walter Selfe, 24, Pembury Road, Clapton, London, E.5.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.)

St. Petersburg C.C. Second Annual Pictorial Salon of Photography.—Entries, February 26; open, March 3–17. (R. Kendal Williams, 602, Snell Building, St. Petersburg, Florida, U.S.A.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Eighth International Salon of Photographic Art (Brussels).—Open daily (except Fridays) from April 3–18. (M. Devaivre, 152, rue Markelbach, Brussels, 3, Belgium.)

Brighton and Hove C.C. International Exhibition of Pictorial Photography.—Entries, March 15; open, April 14–May 1. (E. K. Robins, Little Toll, Isfield, Uckfield, Sussex.)

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

The Division of Films for Spooling

By S. E. L. MOIR.

One of the problems of any long film is where to end and where to begin the several successive spools. The following article considers the various methods which have so far been tried, and indicates a practice that is overwhelmingly successful from the amateur point of view.

ON several occasions recently I have been somewhat concerned at the unskilful manner in which full-length amateur productions have been cut up for purposes of spooling. In most cases, the favoured procedure seems to be that of loading the first spool with as much film as it will conveniently hold—and then to go on loading further and additional spools in a similar way.

Now this, I need hardly say, is a matter of small account wherever two projectors are available for use in showing. Here it is possible to jump the breaks between one reel and the next—so that projection becomes to all intents continuous. But not always can the use of two projectors be enjoyed ; and it is in these circumstances that casual methods of dividing full-length productions indicate lack of regard for the requirements of dramatic unity and for emotional reactions on the temperament of audiences.

Early Lessons.

In the early days of silent cinematography, it was the exception rather than the rule for any theatre to possess more than one cinematograph. This did not facilitate the smooth flow of those "full-length" two-reelers which came along as soon as the new industry began to develop ; but it did lead to the development of a definite technique of film division. From what I am able to remember of this, the initial reel was made to end on a striking climax—whilst the second reel gradually descended from this to the normal action *tempo*. Maybe the method was borrowed from an existing technique of the two-part feuilleton (since it was soon afterwards shamelessly exploited in the weekly-episode "serial" films).

At first sight, it would appear that this is an excellent technique for the amateur to adopt, the audience being kept at a high pitch of excitement whilst the operator is changing over as quickly as he can from one reel to the next. But is it entirely necessary to keep the audience breathlessly waiting for the following reel ?

The answer is, No. For the only thing that can create a tiptoe excitement is the dramatic element of the film itself, and to exploit this is to place sensationalism before cinematography. It is stressing an isolated aspect of production at the expense of all other aspects ; and it is better, I think, for audiences to appreciate films as films and not as sensational little fictions.

Obviously, to bring about this improved state of affairs it will be necessary to discard the earlier methods of keeping audiences in suspense and to concentrate instead upon making each reel of the film as complete and self-contained as circumstances will allow.

Unity.

Eisenstein—who appears to have neglected no phase of production technique—himself makes use of this method to the extent that many single reels from his productions can be shown as unified works complete in themselves.

What the amateur must therefore decide is at what point or points he shall divide his production. Naturally, if this can be split up into two or three reels of approximately equal length, so much the better ; but more often than not it will be found impossible to preserve unity in the spools without having some spools larger than the others.

Much of the difficulty can be overcome—where possible—by closing a reel at the end of one particular sequence, which is not referred to again until the end of the film. By the adoption of this procedure, too, single reels of this and any film so treated can be loaned to individuals and societies without any support from the remaining sequences.

Apart from these considerations, there is a certain facility of direction and editing—any film which is planned as a set of more or less complete reels being far easier to view as a project than the same film visualised in its entirety.

But these are extraneous arguments ; although favourable to the suggestion, they do not emphasise the primary importance of intelligent division—which, after all, is to effect the unavoidable breaks between reels in such a way that it is seldom necessary to sacrifice more than the minimum of enjoyment.

In collecting material for building up a film illustrating the life of those who work in the country, every opportunity should be taken of finding backgrounds and surroundings that breathe the spirit of the countryside.

Heighten Your Pictorial Sense

By M. A. LOVELL-BURGESS.

IF you are ever going to make a worthwhile contribution to the production of films you need to develop your visual faculties. There are, roughly, two types of mind—the abstract and the objective. There are the people to whom learning comes more easily by the eye than the ear. They get an instinctive satisfaction from images, form, colour and texture ; from handling and touching. They respond emotionally to pageantry, ritual, symbolism and order. They are stirred by marching, music and flying banners, and could look for hours at a sunset or cloud formation. They are objective in their outlook. The abstract minded are good at detail. They liked mathematics and languages at school, and can be brilliant at bridge.

It is important for you, as an amateur ciné worker, to know in what category nature has placed you, because the quality of your future work entirely depends on it. The people who assimilate ideas more easily by listening than by seeing do their best work on the technical side. And if they are technically minded, and join an amateur ciné club they are sure to get plenty of opportunities to practise their hobby, and to learn all there is to learn about cameras, lighting, projecting, developing and editing. But practice is not so easy for the amateur whose ambition it is to direct a film. Until he feels sufficiently sure of himself to demand his own unit at the club he has to gain experience on his own. Here are a few ways in which this can be done other than by actual filming.

Next time you go to the cinema, and do not like the treatment of the story in a particular film, do not just condemn it and leave it at that. Go home and, with paper and pencil, sketch out how you would have handled this or that scene if you had been directing. Then contrast it with the original scene and give yourself your reasons for your alterations.

If you are sensitive to the magic of poetry try and find out, as you read, what images are evoked in your mind, because the imagination is particularly active under the influence of rhythm. How would you translate, say, the first verse of Gray's famous Elegy into a scenario ? In one four-line verse you get four pictures—the curfew tolling the knell of parting day, the lowing herd, the ploughman plodding wearily homeward, and the oncoming of darkness.

This translation of mental processes into visual images is a process which is always going on to a certain extent, but particularly when one is reading a story. Practice in this, as in everything else, makes for perfection. So when next you read a novel do not be content merely with following the story. Break off occasionally and try and translate the scene you have just read into vivid pictures in your own mind. As a further exercise in imagination deliberately alter the story, using the novelist's settings.

A particularly good exercise in visual imagination is to listen alone to a play on the wireless, particularly if the lights are switched off. Let your imagination see the scene before television does it for you.

In this pictorial thinking do not be over-influenced by talkie technique. Remember you are in training to produce silent films which are more capable of rapid movement because unhampered by sound.

Finally, study good photographs. If you possess back numbers of "The A.P." don't say you haven't any good photographs, because you have a whole gallery of them. We need to familiarise ourselves—we who are brought up on newspapers and books and wireless and conversation—with images, grouping (natural and artificial), and the possibilities of light and shade. Not by the ear but by the eye shall we learn this black-and-white magic we call cinematography.

"The A.P." Monthly Competitions

AWARDS FOR OCTOBER.

THE exhibition season is well exemplified in the number and quality of the prints entered in "The A.P." competitions for October. This applies particularly to the Advanced Workers' class, which again included entries from all over the world. The number of entries in the Beginners' section was also above the normal, and contained some excellent efforts. The awards are as follows :—

ADVANCED WORKERS' SECTION.

First Prize.—"Bronzes," by R. C. Leighton Herdson, Strathallen, 88, Elfindale Road, Herne Hill, London, S.E.24.

Second Prize.—"The World Forgetting . . . ," by Cecil Milner, 40, Merton Hall Road, Wimbledon, London, S.W.19.

Third Prize.—"Talking on the Hillside," by T. Y. Young, 1½ Yin Fen Chiao Loong, Soochow, China.

Mounting Prize.—"Jolesfield Mill, Sussex," by R. W. T. Collins, Woodlyn, Shakespeare Road, Worthing.

Certificates of Merit.—"A Following Wind," by William Jackson, 105, Park Grove, Hull ; "Dawn," by Charles Mason, 33, Bolbec Road, Newcastle-on-Tyne, 4; "Home in the Rain," by A. James Soye, 23, Belvedere Park, Stranmillis, Belfast, N. Ireland.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3 respectively.

Those awarded Honourable Mention are as follows : Yahya Arif (Cairo) ; Rao Sahib V. Aiyar (Calcutta) ; Hubert M. Bond (Woking) ; (3) J. H. Clark (Camberwell, S.E.) ; (2) R. W. T. Collins (Worthing) ; J. F. Cutler (Edgware) ; (2) Mrs. Vera M. Forsdyke (Mill Hill, N.W.) ; (3) James C. Gilchrist (Pitlochry) ; (2) William Jackson (Hull) ; Francis E. Jones (Tyldesley) ; Dr. S. D. Jouhar (Twickenham) ; (2) Mrs. K. M. Parsons (Reading) ; (2) Alan Rowley (Finchley, N.) ; R. T. Ryan (Cape, S. Africa) ; (2) George A. Slight (Forest Hill, S.E.) ; Leslie Towndrow (Great Crosby, Liverpool) ; A. James Soye (Belfast) ; L. Strong (Northumberland) ; G. T. Yang (Soochow, China) ; (2) T. Y. Young (Soochow, China).

INTERMEDIATE SECTION.

First Prize.—"Bidston," by J. I. Stephens, Strathy, Eign Road, Hereford.

Second Prize.—"Still Life : Bowl with Apples," by L. Woolley, Crofton, 165, Newland Park, Hull.

Certificates.—"Shadows on the Wall," by B. R. Ballimoria, 3, Esmond Road, Chiswick, London, W.4 ; "Washing Day, St. Ives," by James Broadbent, Meanwood Hill, Leeds, 6 ; "A Roof-top," by D. Maclean, The College, Wyr, Near Ashford, Kent ; "Over the Hills," by William E. Warner, 40, Rochester Road, Coventry.

BEGINNERS' SECTION.

First Prize.—"Spring," by C. R. Bailey, 3, Essex Road, Gravesend.

Second Prize.—"The Three Adventurers," by The Rev. J. Hughes, Ingleside, Shoreham-by-Sea.

Certificates of Merit.—"The Skylight," by Thomas Bowker, Harewood Hill, Oakworth, Keighley ; "General Post Office, Calcutta," by Miss Phyllis Platel, 2, Corporation Street, Calcutta ; "Loch Awe," by Miss D. M. Willis, 248, Hungerford Road, Crewe, Cheshire ; "Fishing," by K. C. Yong, 11, Selangar Road, Penang, S.S.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, November 25th.

Battersea Men's Inst. C.C. Demonstration of Various Enlargers.
Bayswater and Paddington P.S. "Miniature Camera Work." "Minicam."
Bethnal Green C.C. Portraiture—Demonstration and Practice.
Birkenhead P.A. Studio Night.
Birmingham P.S. (Ciné Sec.). "Negative-Positive and Reversal." G. H. Sewell.
Borough Poly. P.S. "Photography of Interiors." W. H. Boon.
Brighton and Hove C.C. "A Visit to Soviet Russia in 1934." J. W. Ray.
Bristol P.S. Discussions by Members.
Cheltenham C.C. "Amateur Cinematography." W. Fletcher Cooper.
Chorley P.S. "Searching for the Second Sun." W. P. Brotherton.
Coventry P.C. "With Rucksack and Camera in the Alps." A. Hackett.
Croydon C.C. Discussion. Conducted by E. J. Wadham and D. S. Rose.
Dennistoun C.C. "Enlarging." N. K. Dickie.
G.E. Mechanics' Inst. P.S. "Pictorial Photography" (continued).
Hinckley and D.P.S. 1936 Alliance Competition Prints.
Leigh Lit. S. Whist Drive.
L.M.S. (London) P.S. "Novice to Fellow." R. H. Lawton.
Northallerton and D.P. and C.S. Dorothy Wilding's Portfolio. G. Todd.
Northamptonshire N.H.S. "Some Masterpieces of Photography." Dudley Johnston.
Partick C.C. Visit to "Bulletin" Offices.
Phœnix C.C. "Pictorial Work with Modern Roll Film." Kodak, Ltd.
S. Suburban and Catford P.S. Ciné Evening. Outing Films.
Worcestershire C.C. Members' Evening.

Thursday, November 26th.

Accrington C.C. L. and C.P.U. Slides.
Armley and Wortley P.S. "Southern France." W. E. Gundill.
Blyth and D.C.C. Indoor Photography. Members' Night.
Bolton C.C. "A Few Thoughts on Technique." T. Trevor Potts.
Brighouse C.C. "Picture-Making and Worth-while Photography." H. G. Grainger.
Bury P.S. "Algiers and some Cities of Italy." O. Harris.
Camberwell C.C. Monthly Competition.
Cardiff C.C. "Bromoil." Messrs. Kodak, Ltd.
Coatbridge Co-op. C.C. G.D.U. and S.P.F. Colour Slides.
Dennistoun C.C. Whist Drive.
Greenock C.C. "Composition." J. W. Coombe.
Hampshire House P.S. "Some Little Downland Churches." F. R. Williams.
Howard De Walden P.C. "Eyes and No Eyes." C. L. Clarke.
Hull P.S. "Zermatt and the Bernese Oberland." C. J. Chislett.
Isle of Wight C.C. "Bromide Printing." F. W. Beken.
Keighley and D.P.A. Y.P.U. Trophy Prints from 23rd to 27th November.
Kinning Park Co-op. C.C. G.D.U. Portfolio.
Letchworth C.C. "Nature Photography." Ray Palmer.
Liverpool A.P.A. "Flight in Natural History." J. A. Speed.
Loughborough P.S. "Lantern-Slide Making." Fred Green.
Newcastle and D.A.C.A. "From the Processed Film to the Screen." G. Lough.
Newport and Mon. P.S. Exhibition: "Photograms of the Year."
N. Middlesex P.S. N.M.P.S. Annual Film Show. Members of Ciné Section.
Oldham P.S. Portfolio of Prints. Studio Briggs.
Padiham and D.P.S. "Composition." M. O. Dell. Closing date Portrait Competition.
Richmond C.C. "The Kodachrome Process." S. T. Ternouth.
Singer C.C. Cinema Night. B. A. Stevens.
Stourbridge Inst. P.S. "Amateur Photographer" Prize Prints, 1936.
Stretford C.C. "Printing Processes." C. W. Bradley.
Sunderland P.A. "The Dufaycolor Process." S. Baxter.
Urmston and D.P.S. Monthly Competition. Subject, "Portrait."
Watford C.C. "Combination Enlarging." W. E. Ginger.
Wimbledon C.C. "Amateur Photographer" 1935 Prize Slides.

Friday, November 27th.

Royal Photographic Society. Informal Meeting of Kinematographic Group.
Bethnal Green C.C. "Southdown Rambles." Slides by A. H. Page.
Brighton and Hove C.C. Committee Meeting.
Colne C.C. "Hills and Dales of Derbyshire." S. Greenwood.
Dartmouth Lit. and Debating S. (Phot. Sec.). "A.P." Prize Slides, 1936.
Harrogate P.S. "Architectural and Record Photography." Crowther Cox.
King's Heath and D.P.S. Alliance 1936 Competition Slides.
Leigh Lit. S. "Kirkcudbright." T. B. Howell.
Southend-on-Sea and D.P.S. Lantern Lecturette Competition.
St. Helens C.C. Demonstration for Beginners. J. Gorse.
Walkden and D.P.S. Members' Night. Artificial Light Photography.
Wimbledon Ciné C. Films from Sutton Movie Makers.

Saturday, November 28th.

Royal Photographic Society. Opening of Exhibition of Kinematography.
Ashton-under-Lyne P.S. Closing of Annual Exhibition.
Edinburgh P.S. Opening Day of Members' Exhibition.
Hackney P.S. Outing—Limehouse.
Howard De Walden P.C. Criticism of "Photograms."
Manchester A.P.S. Opening of 51st Annual Exhibition.
Manchester A.P.S. "Photography with Faith, Hope and Charity." J. P. Growther.
Wimbledon Ciné C. Associate Members' Meeting.

Sunday, November 29th.

Todmorden P.S. Programme of Ciné Films. R. Berry (Ciné).

Monday, November 30th.

Ashington and Hirst P.C. Enlarging and Printing.
Bexley Heath P.S. "Two Ancient Northern Cities." E. R. Bull.
Blackpool and Fylde P.S. "Colouring and Binding Lantern Slides," A. V. Mellor.
Bournemouth C.C. Colour Slides by the Rev. T. B. Eddrup.
Bradford P.S. "Charcoal Black and Etchadine." Messrs. Geo. H. Potts, Ltd.
City of London and Cripplegate P.S. "Combination Enlarging." A. F. Snell.
Dewsbury P.S. "Wild Life by the Waterside." A. Gilpin.
Erdington and D.P.S. "Film-Pack Development." J. E. Hall.
Finchley A. Ciné S. "Editing Non-theatrical Film." Mr. Pullin.
Glasgow and W. of S.P.A. "Papers and Negatives." G. S. Nicol, Jun.
Ipswich and D.P.S. East Anglian Fed. Portfolio. Bansall Shield Prints.

Monday, November 30th (*contd.*).

Kidderminster and D.P.S. "An Hour with a Naturalist." H. Thompson.
Kingston C.C. "The Ancient Town of Rye." E. W. Light.
Lancaster P.S. "Mood and Composition." E. Rogers.
Leeds C.C. "A Chat on Colour Filters." S. Bridgen.
Leeds University P.S. Enlarging (Demonstration). F. R. A. Armstrong.
Leek P.S. Demonstration. H. Plant.
Liverpool A.P.A. "Intensification and Reduction." Willis Nevitt.
Manchester A.P.S. "Roughing it in Scotland." G. B. Kearey.
Newcastle (Staffs) and D.C.C. Lantern Lecture. R. W. A. Burgess.
Oldham Equitable P.S. "An Effective Finish for your Best Prints." A. E. Petrie.
Oxford P.S. "Round about Oxford, etc." Some Dufaycolor Pictures. R. Rose.
Peterborough P.S. Landscape Competition Closes. Lantern-Slide Competition Closes.
Phœnix C.C. Closing Date Annual Competition.
Preston C.C. Portrait Section.
Southport P.S. "A Talk on Ireland." J. Maxwell Boyd.
S. London P.S. Visit to the Ciné Group's Studio.
St. Helens C.C. Lantern Slide Postal Club Exhibition Slides.
Tunbridge Wells A.P.A. "Amateur Photographer" Prize Slides, 1935.
Wallasey A.P.S. L. and C.P.U. Print Folio.
Walsall P.S. "Elementary Composition." A. J. Watts.
Walthamstow and D.P.S. Modern Aids to Indoor Portraiture. Messrs. Kodak.

Tuesday, December 1st.

Royal Photographic Society. Lecture—Exhibition of Kinematography.
Basingstoke C.C. "Miniature Negative Photography." Messrs. Leitz (London).
Birmingham P.S. "Pictorial Photography and Composition." Fred Green.
Blackpool and Fylde P.S. "Amateur Photographer" Prize Slides, 1936.
Bridge of Allan P.S. "The Highlands North and West of Inverness."
Cambridge P.C. "Portraiture." H. Yolland Moyse.
Doncaster C.C. "Photographic Chemicals." Dr. W. B. Price.
Dunfermline P.A. Hat Night. Ask a Question.
Exeter C.C. Making Lantern Slides. Practical Demonstration.
Grimsby P.S. Y.P.U. Trophy Prints (Pictorial).
Guildford and D.C.C. "Press Button 'B'." G. H. Dannatt.
Hackney P.S. "Further East" (Ladies Invited). K. C. Keymer.
Halifax P.S. Members' Annual House Exhibition.
Hall Green P.S. Alliance Slides.
Harpenden and D.P. and C.S. "Simple Lantern-Slide Making." F. Lord.
Harrow C.C. "Nature and a Camera." J. Elvet Roberts.
Leamington and D.P.S. "More Ciné Experiences." S. B. Carter.
Leeds P.S. "Picturesque Newark-on-Trent." E. Brand.
Leicester and Leics. P.S. Exhibition of Pictures. A. E. L. Vial.
Manchester A.P.S. "Southward Bound" (Dufaycolor and Kodachrome). C. W. Bradley.
Monkland P.S. "Enlarging." Wm. Allan.
Morecambe, Heysham and D.P.S. "5,000 Miles with Two Cameras." F. A. Jordan.
Newcastle and Tyneside P.S. "Children." G. H. M. Graham.
Newport and Mon. P.S. Annual General Meeting.
Norwich and D.P.S. "Development of Negatives." A. J. Seymour.
Norwood C.C. Rummage Sale. C. H. P. Nutter.
Nottingham and Notts P.S. "Church, Craftsman and Camera." Dr. E. L. Ashby.
Palmers Green Ciné S. Members' Films.
Peterborough P.S. Demonstration—Enlarging.
Portsmouth C. and Ciné C. Third Print and Slide Competition. Criticism of Second.
Preston Scientific S. "Milestones on the Road from Snapshotter to Pictorialist." H. Brown.
Rugby and D.P.S. Lecturette Evening.
Sheffield P.S. "How to Finish your Print." Messrs. Gaidford and Lovatt.
Small Heath P.S. "Fjords of Norway." W. Pedley.
South Shields P.S. "Irish Jauntings." Burdus Redford.
Stafford P.S. Competition (Prints and Slides).
St. Bride P.S. "Printing-in Clouds." G. M. Maynard.
Warrington P.S. Social Evening.
Whitehall C.C. "Book Illustrations." H. Batsford.
Willesden P.S. Pictorial Competition.
Windlesham C.C. "The Paget Colour Process." W. E. Eustace.

Wednesday, December 2nd.

Battersea Men's Inst. C.C. "Amateur Photographer" Prize Slides.
Bayswater and Padd. P.S. "Combination Enlarging." G. Crosby.
Bethnal Green C.C. Practical Work.
Birkenhead P.A. "Carbro"—Demonstration. G. J. de la Mare.
Birmingham P.S. (Ciné Sec.). Lecture. S. B. Carter.
Borough Poly. P.S. "Lantern-Slide Making." A. E. Marden.
Bradford P.S. "Contact Lantern-Slide Making." R. Ellis.
Cheltenham C.C. Lecture by G. F. Harris.
Chorley P.S. "Amateur Photographer" Prize Slides.
Coventry P.S. "The Gowar Coast." G. W. Bott.
Croydon C.C. "Rambles in Sussex." E. Yates.
Dennistoun C.C. G.D.U. and S.P.F. Colour Slides.
Ealing P.S. Lantern-Slide Making and Demonstration. A. S. Kirbyshire.
Edinburgh P.S. "Scottish Portrait Painters." S. Cursiter.
G.E. Mechanics' Inst. P.S. "Quips, Oddities and Ramblings." T. D. Nunn.
Hinckley and D.P.S. W. H. Hadley's Portfolio, "Miscellaneous."
Howard De Walden P.C. Lecturettes by Three Members.
L.M.S. (London) P.S. "Photographic Emulsion Making." A. Robinson.
London School of Hygiene P.S. "Photomicrography." E. A. Robins.
Luton and D.C.C. "Bromide Enlarging." Mrs. A. C. Jordan.
Manchester A.P.S. "Fes the Mysterious." James Shaw.
Northallerton and D.P. and P.S. Ciné Evening.
Partick C.C. Demonstration—"Bromoil." J. W. Combe.
Rotherham P.S. "A Chat on Plates and Films." S. Bridgen.
Shropshire C.C. "Ordinary, Chrome and Pan. Photography." Agfa, Ltd.
South Essex C.C. "Rhythm." R. J. Dobinson.
S. Suburban and Catford P.S. "We Go Afloat"—Lantern Lecture. L. C. Boyce.
Worcestershire C.C. "Kodachrome." Messrs. Kodak, Ltd.
York P.S. "Enlarging on Chloro-Bromide for Exhibition." J. C. Cox.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Competitions and Copyright.

I submitted a photograph, which was reproduced for a small fee, to the "————" "Summer Snaps" Competition. Recently a business firm wrote enquiring what paper published the picture. In the event of their using it, shall I be entitled to payment? W. C. B. (Runcorn.)

In competitions of this type the rules sometimes contain a stipulation that in the event of a competitor winning an award, or having his entry reproduced, the copyright in the picture, and in some cases also the original negative, becomes the property of the newspaper. You should read the rules of this competition as you may have inadvertently parted with the copyright in your photograph. In that case, those who have acquired the copyright can do what they like with the print, and make whatever reproductions from it they please, without any reference to you.

Photographs on Silk.

I wish to make some prints on silk fabric. Can you give me a formula by use of which I could sensitise the silk? S. S. D. (India.)

We cannot possibly tell you in the form of a reply how to do the work you want. You will have to refer to a suitable textbook. For example, in the "Dictionary of Photography" the article on printing on silk runs to over a page of close print, and there are references to various other articles as well.

A Shutter Query.

Can you tell me why my focal-plane shutter works perfectly at times, but on occasions, especially after remaining unused for a week or so, comes to rest with the blind partly open? This misbehaviour occurs most often when set to "Time" or one of the slow speeds.
A. C. F. (Wimbledon.)

Your trouble with the shutter, which is probably most marked in cold weather, is not at all uncommon, but provided the shutter is not in need of readjustment it will probably work satisfactorily if you set it and fire it a good many times in succession, starting with fairly high speeds and working down to the slower ones. The reason for your trouble is that the blinds are beginning to get stiff through slow deterioration of the compound used to make them light-proof. In time your shutter will require new blinds.

Focussing Difficulties.

I am thinking of buying a camera with an f/3.5 lens but hesitate on account of probable difficulties in focussing. Does so fast a lens require a coupled range-finder when used at full aperture? Would it be satisfactory to use a separate range-finder and set the focussing scale to the indicated distance? W. P. (Bath.)

You do not mention the size or type of camera you have in mind. An f/3.5 lens for a quarter-plate camera would be extremely difficult to focus without some assistance, whereas an f/3.5 lens on a miniature camera, owing to the very much greater depth of focus, would present no special difficulty. Nor would any difficulty arise with a reflex camera of whatever size. Providing the range-finder and the focussing scale are correctly marked, a separate range-finder is no less accurate than a coupled one, but it is naturally very much slower and less convenient in use.

Unscrewing a Lens.

I wish to remove the front component of my — lens in order to find out whether the back component, used alone, will make a satisfactory lens for portraiture. But I cannot unscrew the front portion, and I hesitate to use force in case I do some damage. Can you help me?
F. W. L. (Birmingham.)

The front of the lens should certainly be detachable. You might shift it by forcing the front down hard on a sheet of rubber and turning the mount. We are not sufficiently acquainted with the construction of the lens you name to say whether the components can be used alone, but when you have removed the front component you will speedily find this out for yourself.

Clear Corners.

Owing to the use of too small a lens hood, several of my negatives show small clear triangular patches in the two top corners. What can I paint on these corners to bring them up to the density of the surrounding parts?
W. J. A. (London.)

We cannot suggest any effective and simple manner of doing what you require, and we think the job is one that even a skilled retoucher would find difficult. You do not say whether you are using the negatives for contact work or for enlarging. In the latter case, a worker with a little experience would find no difficulty in partially shading the corners with a mask during exposure.

Photographing Silverware.

I have to photograph a group of silver cups, and also (separately) a large cut-glass vase. I believe there is some solution with which one can paint them to reduce unwanted reflections. Can you give me details, please?
D. M. B. (Bournemouth.)

Several methods have been suggested for dealing with this problem. The simplest is to fill the cups with ice-cold water just before making the exposure. If they have been arranged and focussed, etc., in a warm room this procedure will cause condensation over the entire surface that temporarily dulls the high polish. Another plan is to dab the brilliant parts gently with a lump of soft putty. This dulling treatment is entirely under control and can be cleaned off after exposure. Photographing by the light reflected from a large white sheet, keeping the main light source shielded from the objects, is another alternative.

Selling Prints.

I shall shortly have an opportunity of taking some photographs that are certain to be accepted by the newspapers for reproduction. Should I send prints to all the papers individually, or can one send them to an agency for distribution?
L. S. (Bexhill-on-Sea.)

You can adopt either of the two courses you suggest. If you can make the right sort of prints yourself we should advise you to send them direct to those papers you think most likely to accept them. We should advise you, however, not to be too certain about their acceptance, as it is very difficult to submit anything that is not already available from other sources.

Converting a Daylight Enlarger.

I have a fixed-focus daylight enlarger giving whole-plate enlargements from $3\frac{1}{4} \times 2\frac{1}{4}$ negatives. I have been trying electric light as illuminant, but find that the filament forms a dark image on the print. Is there any means of eliminating this?
R. W. B. (Shipley.)

We think you had better give up any idea of using electric light for a daylight enlarger. Even with such arrangements as could be made the results are not at all likely to be satisfactory, for by the time you have diffused the light enough to give even illumination so much light will be lost that exposures will be prohibitively long.

Formalin and the Eyes.

I find the formalin used in hardening prints for glazing affects my eyes much as a freshly-cut onion would do. Is this harmful? J. B. (Ireland.)

Since the eyes are exposed to the action of the formalin for so very short a time, we do not think the irritating effect is likely to do any harm.

★ LIMITLESS LIGHTING EFFECTS and— PICTURES of OUTSTANDING MERIT

★ MATÉLUX

42/-
COMPLETE WITH LAMP
Carrying Case 7/6 Extra.

The Lamp that puts LIGHT in de-LIGHT-ful Pictures

GET YOUR LIGHTING RIGHT !

NO matter what type of camera and lens is used, there is available, to both Amateur and Professional Photographers, this wonderfully portable and intensely brilliant source of light, which has completely revolutionised the field of indoor photography.

Remember, if your lighting is right, and correct exposure given, the resulting negative will be perfect.

The "Matélux" is a perfectly balanced outfit, weighing less than 13 oz., whilst the special supercharged 300-watt Lamp has a life of over 100 hours, and suffices for many thousands of beautiful photographs. The "Matélux" Reflector has a Movable-Socket Table Stand—enabling the light to be directed to any angle.

"Matélux" Lighting Equipment is the open door to complete success in the fascinating field of indoor photography. Learn more about this wonderful illuminant.

POST THIS COUPON TO-DAY

To **MODERN TRADERS Ltd.** 26, BROOK MEWS NORTH, CRAVEN RD., LONDON, W.2

I am interested in "Matélux" Photographic Lighting Equipment. Please send me Free illustrated brochure Treatise on Lighting, also Exposure Chart and full particulars.

FACILITY—precise quantities of solution speedily prepared as required.

ACTIVITY—fresh solutions produce regular and uniformly satisfactory results.

ECONOMY—only sufficient solution for immediate requirements need be prepared. Carton containing 22 pairs of products costs 1/6 from your photographic dealer.

BURROUGHS WELLCOME & CO.
SNOW HILL BUILDINGS, LONDON, E.C.1

Pho. 1638 *Copyright*

What's the secret of such quality in your work Jim?

JIM: No secret, I just use Criterion MEZZOTONE Paper, because of its rich warm tones by simple development and its speed that simplifies enlarging. That's part of it only—the rest is their Cri-tona.

TIM: What's that ?

JIM: A wonderful solution! Just put the prints in for a minute or two, when it intensifies every detail and gives amazing depth.

TIM: Yes, I see, an almost stereoscopic effect.

JIM: At the same time it tones. When the tone you require is reached you just take the print out.

TIM: Do you use it for Lantern Slides also ?

JIM: Yes . . . . and the same sparkling image results. Try it with your Criterion Bromide exhibition pictures, Tim, it gives a rich purplish black and seems to clean up the whites as well.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

Here are the first of the *new* **PHOTO-GUIDES**—four little books crammed from cover to cover with the information you know you need. Between them they answer every question that has ever perplexed you and put you on the road to success in photography.

1. **"A GOOD PICTURE EVERY TIME"** explains the rules that govern pictorial composition, tells you how to make every snap an "exhibition" picture.
2. **"SHARP-FOCUS/ACCURATE EXPOSURE"** gives you easily understood and *easily remembered* rules for deciding the correct setting of distance scale, lens aperture and shutter time.
3. **"130 PHOTO-FAULTS"** covers every stage of photography from camera-loading to enlarging, giving the cause and cure for every fault that's ever worried you—or ever likely to.
4. **"TAKING PICTURES AT NIGHT"** will convince you that your camera is capable of incredible achievements, will show you how perfect night pictures can be secured with even the smallest, simplest camera.

Price 1s. 1d. each, or post free 1s. 3d.
The four books, 4/6, post free.

Obtainable at all Photographic Dealers.

DOLLONDS

Dollond & Aitchison Ltd. ESTD.
OPTICIANS TO H.M. GOVERNMENT 1750

. . . it's not far off

In four weeks it will be Christmas! Do you realise how quickly the time will fly?—and there's lots to do—ordering Christmas cards—booking films for your home ciné and talkie entertaining—buying presents for friends and relatives. Why not start doing all this NOW? In a fortnight's time the rush will be on, and it's much nicer to do things in a leisurely and enjoyable way. Call at Bond Street and let us show you our enormous range of cameras and accessories—let us demonstrate the latest talkies and movies so that you can compare them at your leisure, or, if you cannot call, send for a free list appertaining to the particular photographic or ciné gift you have in mind—any list will be sent on receipt of 2d. postage.

FREE MINIATURE CAMERA INSURANCE

Free "All Risks" Insurance on Miniature Cameras value £40 or over, whether bought from us or not.

OUR "MICROLUX" DEVELOPING SERVICE

If you want the finest possible results send us your films for development by our "**Microlux**" and "**Individual**" Systems.
"**Microlux**" yields the finest grain of all, but requires that films be over-exposed.
Films processed in this way receive the most careful handling possible.
Price per 36-exposure strip **4s. 6d.**
18 exposures (35-mm.) **3s. 6d.**

Ask for descriptive MICROLUX leaflet.

NIGHT PHOTOGRAPHY INDOORS

SELO LIGHTING SET

This efficient and inexpensive outfit has an extra large spun aluminium reflector mounted on a solid stand. Provision is made for controlling the throw of the light. Complete with Photoflood Lamp, 3 yards of flex and universal connecting plug. Price **17/6**

Obtainable from all photographic dealers.

Picture-making indoors is proving one of the most popular branches of the modern hobby of night photography. And small wonder, for what better pastime for the long, cold winter evenings is there than the taking of happy homely snapshots and portraits, treasures for the future whose worth will grow as the years pass?

Night photography is simple — as simple as daytime snaps in summer if you use Selo Hypersensitive Panchromatic Roll Film or Ilford Hypersensitive Panchromatic Plates.

The Journal for Everybody with a Camera

Vol. LXXXII. Wednesday, December 2nd, 1936. No. 2508.

For Christmas give a Leica

It is the 'present' with a future—because it will go on giving pleasure for many years. With it you can take indoor snaps of the Christmas party—or exquisite landscapes, whatever the light. These are only two features of Leica photography. Your Leica dealer will explain the full possibilities.

There's the Leica projector and a wide range of Leica accessories which make admirable Christmas gifts to Leica owners.

Ask any good-class photographic dealer for a demonstration or write for descriptive literature to

FURNITURE, CARS—WHY NOT CAMERAS?

While many folk buy *all* their "big stuff" on easy payments, they never think of buying such a small yet pleasure-giving thing as a camera by the same method, they simply go without one and remain oblivious to the joy that an extra few shillings on their total easy payment outlay will bring.

The *wise* spender not only puts so much away each week for gas rent, furniture, etc., but includes his pleasures on the same basis—that's the only logical method of doing away with an "all work and no play" existence.

Even the man of modest income, by careful planning, and with the aid of our very easy payment plan, can become the possessor of a miniature camera—even the much coveted Leica may be his. Should he be an apt photographer he can earn money with his camera, thus the camera will help to pay for itself as well as afford endless enjoyment. The Wallace Heaton terms are on nine equal monthly instalments, and only 5 per cent is added to cash price (or 5/- if under £5). Send 2d. postage for free lists and buy *your* camera this easy way.

YOU CAN GET A £16 : 19 : 0 LEICA AT BOND ST. FOR AS LITTLE AS 39/7 DOWN

pay the balance by a further eight similar monthly instalments while using your purchase.

We have every Leica in stock and offer a host of special free facilities to users. Send for details of them and also a leaflet on our "Microlux" developing service for miniaturists. We are the leading miniature specialists and offer expert unbiased advice free at all times.

FINAL ANNOUNCEMENT...

OF WALLACE HEATON'S 'OPEN' PHOTOGRAPHIC COMPETITION WHICH ENDS ON DEC. 31st, 1936

While we do not ***guarantee*** *to return prints, every endeavour will be made to do so when they are accompanied by suitably stamped envelopes. See that all prints have your name and address on the back, and that each package is stamped with full prepaid postage.*

●

An exhibition of the best prints submitted will be held, at the close of this competition, in our new Galleries at 127, New Bond Street, W.1, prior to the return of prints to their owners

●

COUPON *which must be affixed to the back of each entry.*

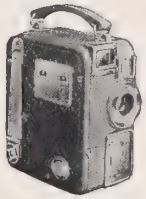
WALLACE HEATON LTD "OPEN COMPETITION"

December 2nd, 1936.

FOR ANY AMATEUR—ANY SUBJECT—WITH ANY CAMERA

If you have not already sent in your effort for this splendid competition, do so at once. Any subject is eligible—trees, landscapes, churches, children at play—close-up or distant pictures of any subject you care to choose. None of the tricks of the fully-fledged worker are allowed to improve his chances of winning—only photographs made straight from untouched negatives are eligible. No retouching, faking or combination printing—just good photography. Simple spotting to remove pinholes, etc., is all that is permitted. Enlargements, of course, are allowed—in fact, we recommend an 8½×6½ enlargement as always looking best. A prize of 21/- will be awarded for the best picture received each week in addition to the first prize of £25, which will be awarded for the best effort received during the competition (October 1st to December 31st). For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

WALLACE HEATON Ltd.



127, NEW BOND STREET, LONDON, W.1

This coupon must be attached to the back of your entry. Next week's coupon will be valid for the current competition IN ADDITION to the Competition commencing January 1st, 1937.

£48:17:6

Nine monthly payments of 114/-.

● ● ● The New 'SPECTO' 9.5-mm. Projector . . . .

'A really magnificent job' . . . . and only **27s. 9d.** down

British Made

Sets an entirely new standard in Ciné Projectors, combining highest standards of workmanship, design and performance with most moderate price.

Note these points :

Framework and base of aluminium and high tensile alloy castings, giving massive strength without undue weight. ● All gearing and driving mechanism runs in oil bath. ● Double-claw movement. ● Ready accessibility of all important parts, for cleaning, inspection, etc. ● Fast, silent and automatic rewind. Motor speed regulator. Mechanical tilting adjustment. Separate lamp switch.

Special compact low voltage high intensity Lamp, giving extraordinarily brilliant illumination, with HIGH-POWER CONDENSER, OPTICALLY WORKED MIRROR, and 35-mm. f/1.7 PROJECTION LENS. SCREEN LUMINOSITY INCREASED 100 per cent. High-efficiency cooling, combining powerful fan and finned lamphouse.

Marked absence of flicker, due to most careful adjustment of film transport and shutter speeds.

PARTICULARLY ECONOMICAL, BOTH IN UPKEEP AND IN FIRST COST.

Price £11:17:6

Nine monthly payments of 27/9

Built-in Transformer or separate Resistance, £1 10s. Write or call for further details.

YOU CAN SEE THE DIFFERENCE 'CELFIX' MAKES

The illustrations here show the marked difference between "Celfix" and ordinary screen surface-projection. "Celfix" is the "Rolls-Royce" of ciné screens. Just as a cheap mass-produced car is worn out and forgotten while the Rolls-Royce is still running perfectly so it is with Celfix and its cheap imitations. Celfix (glass-beaded) brilliant (5½ times greater than ordinary white surfaces) is produced to last—the unique construction of the screen affords permanent surface protection. Get a Celfix now for better movies—it may cost you a little more in the first place, but it will prove a real economy in the end. **Look for the name "Celfix" on the screen and do not be put off with any imitations.**

"Celfix"

REGD. TRADE MARK

SUPER BRILLIANT SCREEN

Fitted with the world's finest Celfix Crystal-Glass-Beaded and Silver Surfaces. Stock sizes: 27×20 in. to 96×72 in. Silver from 70/-. Crystal-Glass-Beaded from 90/-. Sizes up to 13×10 ft. to order.

Patented throughout the world. British Patent Nos. 345,925, 376,385, 416,403.

The reflex with the brilliant image for easy focussing

Both Models I and II of the Ikoflex are equipped with a special collective lens ground on the under side to form the focussing screen. This ensures an extraordinarily brilliant image even at the corners of the picture. This large and plastic image enables even the inexperienced photographer to obtain first-class pictures by permitting him to concentrate on the composition of the picture.

The Ikoflex takes twelve pictures $2\frac{1}{4} \times 2\frac{1}{4}$ in. on the usual $3\frac{1}{4} \times 2\frac{1}{4}$ in. roll-film spool. It is made in two models. Both models are equipped with a special type focussing screen, self-erecting hood, into which is fitted a magnifier for needle-sharp focussing, and automatic depth-of-focus scale.

IKOFLEX

IMPORTANT

All Zeiss Ikon cameras sold by us in Great Britain are equipped with distance and depth-of-focus scales in English feet. Also diaphragm scales are engraved according to the R.P.S. standard.

The Ikoflex II is equipped with the world-famous Zeiss Tessars or Triotars f/3.5, Compur shutters, and is elegantly finished in chromium. The Ikoflex I is equipped with the Zeiss Ikon Novar f/6.3 or f/4.5 anastigmat and Derval or Klio shutters.

Ikoflex II, prices from **£15:12:6**

Ikoflex I, „ „ **£6:12:6**

Ask your dealer to demonstrate the Ikoflex. Name of nearest dealer, together with illustrated prospectus, free on request.

TOPICS of the Week

ALL our readers will be glad to know that the new volume of *Photograms of the Year* is now ready and is on sale this week. It is the 42nd year of publication, a record for any book devoted to pictorial photography and notable because a steadily increasing popularity is shown for it every year. On this occasion the annual again presents a well-balanced selection of fine reproductions of the best of the year's work, and the international character of both the pictures and the contributed articles is strongly emphasised. British workers are, however, well represented and many favourites from the "Salon" and the "Royal" will be welcomed in its pages. The originals of the pictures reproduced will be on view at the Camera Club early in the New Year, and thereafter in different parts of the country. This will give readers every opportunity of seeing what a really fine collection is presented. In the meantime *Photograms of the Year* is obtainable from all booksellers, newsagents, bookstalls and many dealers. Price 5s. paper cover or 7s. 6d. cloth bound, or direct from the publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, S.E.1, at 5s. 6d. and 8s. post free. Copies should be obtained without delay as it will make the ideal gift book for Christmas.

Photography at the Patent Office.

It appears that the Patent Office does a really big business in providing photographic copies of its records. Some particulars of these activities were given by the president of the Institute of Patent Agents in his address from the chair of that body the other day. But complaint was made that two or three days are normally required for the obtaining of a print, and the greater promptitude in this respect of Berlin was emphasised. It was stated that patent agents or inventors who required copies urgently have been known to telegraph their requirements to an establishment in the German capital one forenoon, and have received the desired copies by air mail on the morning of the next day. Having regard to the size of the business it is to be hoped that the Patent Office will be able further to develop it, and even to experiment with other processes of reproduction.

DECEMBER IN TOWN.

A topical rainy day snapshot in the Strand.

Flame.

Dr. Oliver Ellis, in his fascinating lecture at the Royal Photographic Society on the subject of the photography of explosions, added his quota to recent derogatory remarks about the photography of the human subject. He could not understand, when there was such a subject as flame to be photographed, whether a guttering candle or a splendid bonfire, why people should trouble about such trivial things as photographing one another. To photograph the face of anybody, he says, is always open to the danger that you may catch your friend at the point between two characteristic expressions, so that the camera petrifies something that the far-seeing Creator has made essentially transient. The thing to do is to wait for a characteristically recognisable expression and snap that. In flame photography we are not troubled by these considerations, but only with the registration of infinitely rapid movement. Exposures must be short indeed, and 1/1,000th of a second, when one is photographing flame, may well constitute a time exposure.

The R.P.S. Exhibition of Cinematography

THE fourth exhibition of cinematography is now being held at the house of the Royal Photographic Society, 35, Russell Square, W.C.1. Opened on Saturday, November 28th, by the Hon. Anthony Asquith, it presents in a condensed form many phases of professional ciné work and much that will appeal to the amateur cinematographer.

This is particularly the case with the apparatus on view, as in every instance sub-standard cameras and projectors are shown. Practically every firm of note who specialises in these instruments and the accessories for use with them is represented, and the visitor to whom this side of cinematography appeals will have much to interest him.

In the main gallery, and in other rooms of the building, a very considerable display of " stills " is to be seen. These include some hundreds of prints of episodes from well-known films that have been shown at the cinemas and a number of others from amateur films—some of the latter easily bear comparison with the professional productions.

This year, the educational and documentary film is more in evidence than in previous years, while the cartoon film is illustrated in many phases of its remarkable process of construction, the examples of colour cartoon work being particularly fascinating. Amateur colour cinematography is well emphasised in the exhibits, especially in the display by Kodak, Ltd., with Kodachrome, and in that by Ilford Ltd., with Dufaycolor.

The following programme of meetings has been arranged during the course of the exhibition. Lectures and projection of both silent and sound films will be given.

Friday, December 4th, 7 p.m.—Joint Meeting of Ciné Group with Pictorial Group. Speaker, D. McMaster. Saturday, December 5th, 3 p.m.—Projection of Competition Films. Tuesday, December 8th, 7 p.m.—Programme arranged by The Association of Ciné Technicians. Tuesday, December 8th, 7 p.m.—"A Professional Turns Amateur," by Norman McLaren. " Studio Lighting for Cinematography." by Bryan Langley. Friday, December 11th, 7 p.m.—Joint Meeting with Colour Group. Competition Colour Films. Saturday, December 12th, 3 p.m.—Criticism of Competition Films, by Basil Wright. Tuesday, December 15th, 7 p.m.—Presidential Address. " The Present Position of Colour Cinematography." By Dr. D. A. Spencer. Friday, December 18th, 7 p.m.—Joint Meeting with Pictorial Group. " The Slide Film," by Oliver A. Minns. Saturday, December 19th, 3 p.m.—" The Story of the Cartoon Film," by E. Anson Dyer.

The Tuesday meetings are open only to Members of the Society. At all other times the exhibition is open to the public. Admission free on signing visitors' book.

"The Amateur Photographer" EXPOSURE TABLE—*December*

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

Subject.	Ordinary.	Medium.	Rapid.	Extra Rapid.	Ultra Rapid.
Open seascapes and cloud studies	1/20 sec.	1/30 sec.	1/60 sec.	1/80 sec.	1/100 sec.
Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes ..	1/10 ,,	1/15 ,,	1/30 ,,	1/40 ,,	1/50 ,,
Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes	1/4 ,,	1/6 ,,	1/12 ,,	1/15 ,,	1/20 ,,
Landscapes in fog or mist, or with strong foreground, well-lighted street scenes ..	1/3 ,,	1/4 ,,	1/10 ,,	1/12 ,,	1/15 ,,
Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage	3/4 ,,	1/2 ,,	1/4 ,,	1/5 ,,	1/6 ,,
Portraits or groups taken out of doors, not too much shut in by buildings	2 secs.	1½ ,,	1 ,,	1/2 ,,	1/3 ,,
Portraits in well-lighted room, light surroundings, big window, white reflector ..	6 ,,	5 secs.	3 secs.	2 secs.	1½ ,,

As a further guide we append a list of some of the best-known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hypersensitive panchromatic plates and films require less exposure than the ultra-rapid.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Points on Negative-Making by ARTIFICIAL LIGHT

In this article various points bearing upon successful negative-making by artificial lighting are discussed. The choice of material and some notes upon development are given.

AT the present time of the year many photographers are turning their attention to the possibility of taking pictures by artificial light. There are numerous subjects which offer possibilities, by the use of high-speed plates or films, although the photographer's apparatus may be of the simplest.

Some years ago a mild sensation was created by an article in "The A.P." illustrated by prints from negatives exposed by candle-light. The subjects were still-life groups, and the long exposures were of no consequence. To-day, the possessor of a camera fitted with a large-aperture lens is able to take snapshots in the streets, or in the theatre, while the photographer with less speedy apparatus can secure good negatives in the case of well-lighted subjects with an exposure of a second or two.

The Plate or Film and the Light.

In the not very distant past, photographers were concerned with colour sensitiveness in their materials, with regard to subjects in colour, when it was necessary to render the colours in their true tonal values. There is now another use for this property. The plate or film that is sensitive to all light rays, and through its increased sensitiveness to the red rays, allows of very short exposures being made to the light source which is rich in red.

Half-watt lighting contains a large proportion of red rays, and the fact that panchromatic plates and films are red-sensitive results in an increase in speed. This is the reason why a panchromatic plate or film may be marked at 2,500 H. & D. to daylight, but at 8,000 H. & D. to artificial light (half-watt).

If, instead of the normal type of electric lighting, one of the photo-flood bulbs is employed, which during its short but brilliant life produces a light of great intensity, it is possible to make snapshot exposures successfully indoors.

Pan. or Ortho ?

There are still many photographers who, on account of fancied difficulties, refrain from the use of panchromatic material. This is chiefly because they fear to manipulate highly sensitive material in the dark-room, and in the case of many plate-users, who have no tank for development, panchromatics are avoided. This need not be the case, especially as the use of a desensitiser makes development quite simple.

If the photographer feels that panchromatic material is beyond him, it does not by any means ban photography by artificial lighting for making exposures. The highest speed orthochromatic plates and films are fast enough for many subjects where extreme rapidity and very short exposures are not necessary.

Portraits Indoors.

It is possible when using this material to take portrait photographs indoors, using the domestic lighting. As a rough guide to exposure, portraits can be taken in an ordinary room lighted by two 100-watt bulbs, and fully-exposed negatives secured with three seconds' exposure at f/6.3. If photoflood lamps are used, the exposures can be shorter still.

While orthochromatic material is not as fast to artificial lighting as panchromatic, there is sufficient speed for all practical needs. Professional photographers are not all in favour of panchromatics, and many still depend upon orthochromatic material for studio exposures by electric light.

For out-of-door exposures at night orthochromatic material provides sufficient speed, and for those subjects which do not include moving objects, or for other reasons do not require very short exposures, quite satisfactory results will be obtained.

Exposure.

Correct exposure is a matter for experiment, and one or two trials will soon indicate what is necessary. In the case of exposures in the home the conditions are more or less standardised, and after one or two trials correct exposure becomes easy. The photo-electric meter is a guide, but is not always practicable under weak lighting conditions.

A good plan is to experiment with still-life subjects and the best lighting available.

Development.

Development of exposures made by artificial lighting calls for care. The contrasts of the subject are strong, and this is especially the case with exposures made out of doors. Care must be taken not to carry development too far. Over-development is the most common fault, the high-lights being too dense to print well. Home portraits are frequently taken by strong lighting without a diffuser, and this results in harsh contrasts, especially if the negatives are over-developed. It is a good plan for this work to use plates or films of the soft-gradation type.

The water-bath method of development is also helpful in preventing excess of density in the high-lights. There are several ways of employing the method, but the following will be found very successful.

"Water Bath" Developing.

In the case of high-speed panchromatics desensitising is a necessary preliminary. Development is watched, and after the high-lights are clearly seen as the negative lies in the dish, the plate is lifted out and gently lowered into a dish of clean water. It is left thus for two minutes, and then replaced in the developer for another minute, then into the water for two minutes, and so until development is complete. Care must be taken to lower the plate into the water so that the developer is not washed from the film, and the dish should not be rocked.

The principle of "water bath" development is that the plate leaves the developer impregnated with the solution. In the water bath the developer in the shadow parts of the subject continues its action. That in the high-lights, having done its work, is partially exhausted, and the action goes no farther. In this way the density of the high-lights and shadow becomes equalised.

Finally, the quality of any negative made under the conditions considered in this article should not be judged until a print is made.

LET SM

By ERNEST CARVER.

A characteristic pose.

IT is a strange thing that so few amateurs appear to think of photographing their friends in natural positions with cigarette or pipe between fingers or lips. A smoker is ill at ease without something to smoke, and, conversely, most natural and characteristic when smoking.

I have myself experimented a good deal with " smoking " sitters, chiefly indoors, and have derived the greatest possible pleasure from the work, besides getting excellent portraits. I use a Contax camera and panchromatic film, and my pictures are practically snapshots, taken either during actual conversation or with but a very brief warning before exposure. Any other small or miniature camera could, of course, be used for the work, the essentials for which are a fast lens and fast films.

First of all I arrange the lighting, generally by means of two flood-lamps. The background is easy, as can be seen from the illustrations. Merely a flat grey, or plain dark cloth hung up with as few folds as possible. The lighting is the really important thing. Have a strong main light at close quarters, and a more distant secondary one, but take care not to have them competing for equality in strength or the modelling of the faces will suffer.

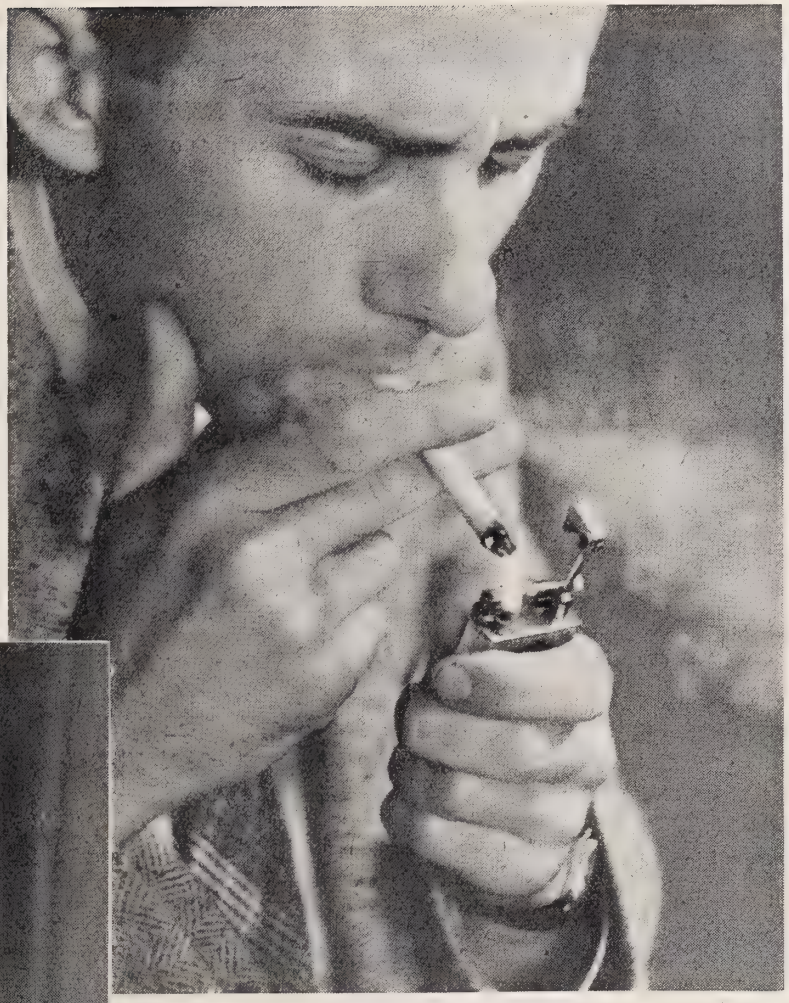
A large aperture in the lens is essential for rapid exposures, and I focus the nearest feature of the face sharply with the range-finder. It is to the actual pose that most thinking

Visions in the air.

should be devoted. If you know the sitters well, and have already studied them carefully, it is easy to watch for characteristic gestures in each case. Do not tell them of these gestures, but get them to talk with a confederate until the right action comes along, then snap at once, and if possible take two or three of each gesture.

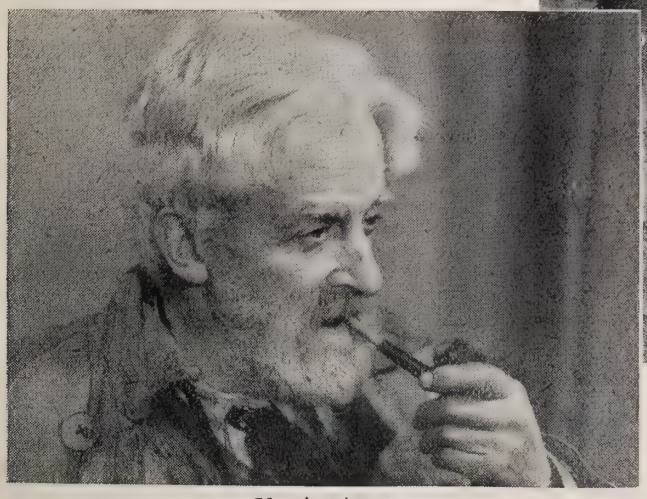
With the two flood-lamps and the fastest pan. film, exposures of 1/10th sec. at f/2.9 should give well-exposed negatives. Under certain circumstances of lighting half this exposure may be given at the same aperture or at f/2. With smaller apertures, longer exposures will be necessary,

" By the way —— "



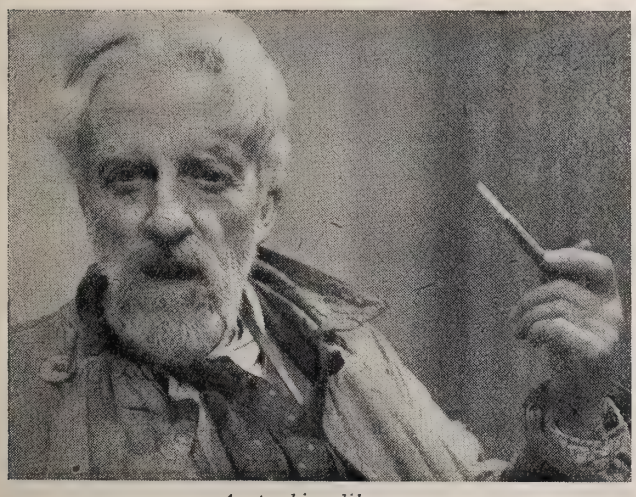
OKERS SMOKE

but even ½ sec. will not seem long if the camera is held on a firm base.



I rarely take a picture with the smoke actually rising past the face, though this is sometimes very intriguing. It is also fascinating in that it causes very characteristic expressions on the face of the smoker. Watching for opportunities when the sitter removes or replaces a pipe or cigarette, or relights it, also provides an interesting exercise for the photographer.

The negatives should be developed for softness and freedom from grain. I enlarge to 10×8 as a rule, and require the negatives to be as sharp and grainless as possible.



Only the fringe of this subject has yet been touched by the amateur, and it is one that the professional world would do well to exploit I say this because my sitters, who are, of course, friends who have merely dropped in, express themselves delighted with the results, and would, if I were to consider the proposition, ask me to make dozens of prints and enlargements for them. Friends of my sitters, too, who are usually the people who are most fiercely critical of portraits, are enthusiastic, and beg for experiments on themselves. Indeed, I have seriously considered looking for a commission from the tobacco manufacturers! No harm in looking!

The lighter that worked.

Chewing it over.

A speaking likeness.

Even a sugar cigarette helps.

Readers' Hints, Tips and Gadgets

A USEFUL HEATER FOR SOLUTIONS.

DURING the cold weather considerable difficulty is often experienced in keeping the developer and other solutions in use at the correct temperature.

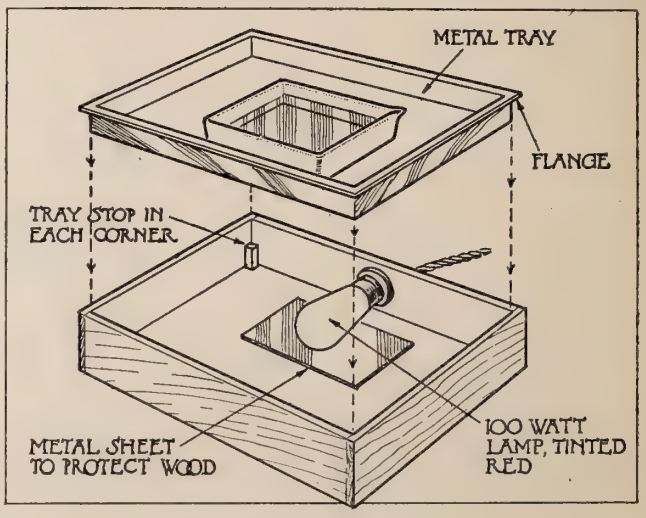
The device described here will entirely overcome this difficulty and can be very easily and cheaply made.

The apparatus consists of a wooden tray in which an electric light bulb is fixed, as illustrated. A tin tray placed into the opening, leaving the edges overlapping, will complete the outfit.

The wooden tray should be just deep enough to accommodate the bulb when it is laid sideways—3 in. will be ample—and of the same length and width as the tin tray.

The bulb should be about 100 watts, and preferably red in colour in order to overcome any risk of fogging of the sensitised material caused by stray light.

As the bulb will be near to the bottom of the wooden tray a small piece of metal should be screwed on to the bottom to safeguard against the heat affecting the wood.



The tray can accommodate the various dishes of solutions and the necessary heat can be obtained from the bulb.

Porcelain and enamelled steel dishes are ideal for this purpose, but bakelite dishes are unsuitable on account of their non-conducting of heat.

After a while the temperature of the solutions may rise to a higher temperature than that required, in which case it is only necessary to switch the light off.

By this method the various solutions can be easily kept at the correct temperature and assist in obtaining consistent and good results.

LEONARD G. HONE.

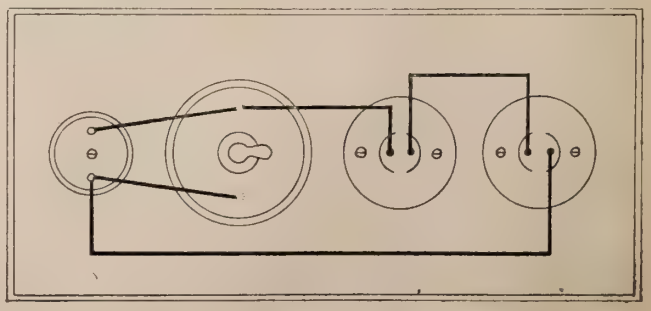
IMPROVING A DIFFUSED-LIGHT ENLARGER.

SOMETIMES it is very difficult to focus a dense, fully-exposed negative, especially of the miniature variety, with a diffused-light enlarger, even at f/4.5, owing to poor illumination. Many people get round this difficulty by focussing with a thin negative first and then replacing it by the dense one; but there is always the risk of a small displacement and an out-of-focus result.

The finished resistance unit.

The only real cure is a brighter light, and this can be obtained very successfully with the help of a small photoflood lamp. Now the life of this lamp at full brilliance is only about two hours, which from the enlarging point of view is uneconomical; and in any case it would be too hot for continuous use in the lamphouse of most instruments.

But there is absolutely no reason why it should not be used at full brilliance for a few moments when focussing, and then reduced to the power of an ordinary 100-watt lamp for exposing purposes; thus reducing the heat and very considerably increasing the life of the bulb. All that is needed is a simple resistance unit such as described here.



The unit consists of a wooden base, recessed on the underside for the wire connections; two lampholders; one switch; one 5 or 10 amp. two-pin socket, whichever is the most suitable; and a heavy-duty resistance. For this any electric fitting such as a bowl-fire, an electric iron, a kettle or toasting rack which is rated at about 600 watts for 200-250 volt mains will serve perfectly. This wattage rating is not critical, but a 600-watt fitting will dim a small Osram photoflood to about the same level as an ordinary 100-watt lamp.

The unit is wired as shown in the diagram; the two connections from the outside lampholder go to the second holder, one direct and the other via the two-pin socket. The switch is also wired to the socket so that when it is in the "on" position, the socket is short-circuited.

When ready for use, put a small type photoflood lamp in the enlarger and mount the resistance unit in a convenient position. Then connect the electric supply to the outside lampholder and the enlarger to the second holder. The resistance (bowl-fire, electric iron, etc.) is plugged into the two-pin socket and then placed under the table out of the way. It will get hot but not red hot when in use; in fact an ingenious worker might arrange it to warm his solutions during the winter. The switch puts the resistance in or out of circuit, and controls bright or dim illumination.

And do not think that because you have plugged in a 600-watt fire or other fitting, that you are consuming this amount of current. The electric fitting is in series with the photoflood lamp, and in the dim or working position of the switch the two combined will not take more than 150 watts; but at full brilliance, of course, the lamp takes more than this.

F. GANDON.

Electrical connections of the unit.

PHOTOGRAMS OF THE YEAR

ON SALE EVERYWHERE

The Annual Review *of the* World's Pictorial Photographic Work

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"PHOTOGRAMS OF THE YEAR," now making the 42nd annual appearance, maintains the high standard of artistic achievement which has characterised it from the first number.

This year's subjects range from everyday scenes and still-life studies to landscapes, portraits and architecture. Beauty, art and technical skill are blended to produce an outstanding volume of photographic excellence.

Keen photographers everywhere will find pleasurable occupation in making a careful study of these splendid examples of the art of the camera, and of noting the latest developments in technique.

FOR THE BEGINNER

HORIZONTAL MAGNAPRINTS

Enable anyone to start the very fascinating practice of enlarging with sound and efficient apparatus at a very moderate cost.

Model H/O. For all miniature negatives **£2 17 6**

H/I. For $3\frac{1}{4}\times2\frac{1}{4}$ and all smaller negatives **£5 5 0**

Ensign Magnaprint Enlargers give you super-speed without loss of quality, due to the perfect system of illumination, whereby the light diffused at its source, and requiring no adjustment, is concentrated on the lens by a powerful double condenser.

By this means, every ray of light coming from the illuminating source is used for the purpose of exposure.

Grain, scratches and imperfections in the negative are reduced to a minimum and at the same time excessive contrast is controlled.

Model AV/O

STANDARD MODELS.

Model V/O. For all miniature negatives, enlarges up to 15×10, with Ensar f/6.3 Enlarging Anastigmat **£4 15 0**

Model V/OM. As above, with Magnar f/4.5 Enlarging Anastigmat **£6 10 0**

Model V/OL. For use with Leica lenses. As above, but without lens. Including special carrier for Leica or Contax negatives .. **£4 10 0**

NEW MODELS—With Friction Drive Raising Mechanism.

Model V/10. For all sizes up to $2\frac{1}{4}\times2\frac{1}{4}$, enlarges up to 15×15, with Ensar f/6.3 Enlarging Anastigmat **£7 15 0**

Model V/10M. As above, but with Magnar f/4.5 Enlarging Anastigmat **£9 10 0**

THE CHOICE OF A MINIATURE CAMERA

Once more the problem of Christmas presents looms large. Where photographic apparatus comes under consideration—especially the question of picking out a miniature camera—we suggest turning the work over to us. If there is one thing on which we really pride ourselves, it is the ability and the willingness to give frank advice on such questions as these. Those who have previously had dealings with us will know that we are quite ready at any time to act against our own immediate financial interests by recommending inexpensive apparatus in preference to expensive apparatus where we happen to know (as is often the case) that the cheaper article is likely to give more satisfaction, or at any rate, is more suitable for a certain purpose. In the long run this policy is better from all points of view, because we realise that an enthusiastic customer is worth pounds spent on advertising.

If any doubt exists concerning the choice of a suitable camera, or for that matter, lens, enlarger, exposure meter, filter, etc., why not write to us ? Address the envelope to Mr. Lewis personally, who will then be pleased to attend to the matter himself.

THE CONTAX CAMERA

A large proportion of the well-known professional workers who formerly employed several cameras of different sizes and types, and who are now relying exclusively on the Contax and its remarkable range of accessories to do all their work, were introduced by us to this amazing camera.

The Contax is *the* universal camera and we are *the* Contax experts. Years of working experience have familiarised us with every one of the many special purposes for which the Contax may be employed. We shall be delighted to pass on to those amateurs or professional workers who are considering the acquisition of a Contax such special information regarding the comparative merits of the various lenses, etc., that we have accumulated both from extensive use of the apparatus itself and from the reports of the many customers to whom we have supplied Contax cameras.

We have a number of interesting booklets dealing with Contax photography which we shall be pleased to send on request. The Contax ranges in price from £31 to £78 5s.

A NEW RANGE PARAPHENYLENE-DIAMINE DEVELOPERS BY R. G. LEWIS.

We now prepare four types of paraphenylene-diamine developers. These are: *Sease No.* 1 (straight paraphenylene), *Sease No.* 3, *Sease No.* 3 *Modified*, and *Paraphenylene - diamine - metol*. The last of these formulæ is without doubt the best all-round developer for winter photography in general. It is particularly useful where photographs are taken under poor lighting conditions; for stage, action and candid photography in general. This is on account of the action of the metol constituent which brings up the latent detail in the shadows. Paraphenylene-diamine-metol developer produces remarkable shadow detail, gradation and contrast combined with exceptionally fine grain in cases where only minimum exposures are possible. In contrast with most other types of paraphenylene developers, it has little or no retardation effect on the speed of the film and therefore does not require previous "over-exposure." The prices for our three Sease formulæ are 1s. 2d. per tin. Paraphenylene-diamine-metol costs 1s. 9d. per tin. Postage 3d. for one tin, 4d. for two tins, three or more tins post free.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

A Few exceptional Cameras with Extra-Wide Aperture Lenses. Specially recommended for Winter and Artificial Light Photography in general.

Contax Model II, f/1.5 Sonnar lens. As new £52 10 0
Leica Model IIIa, f/1.9 Hektor lens. As new £45 0 0
Exakta Multispeeds Model B (latest lever-wind type), fitted improved Dallmeyer f/1.9 Super-Six lens and case. Indistinguishable from new.....£26 10 0
Contax Model I, latest 1936 model, guaranteed very slightly window-soiled only, f/1.5 Sonnar lens, with carton and instructions booklet.....£42 10 0
Another, as above, but second-hand. Condition as new £39 10 0

CONTAXES :

Contax Model III, f/2 Sonnar lens, ever-ready case. As new.....£55 0 0
Contax Model I, latest type range-finder, f/2 Sonnar lens. As new.....£29 10 0
Contax Model I, slow-speeds shutter, f/2.8 Tessar. Practically as new.....£19 10 0
Contax Model I, slow-speeds shutter, f/3.5 Tessar. Practically as new.....£17 10 0
Plate Back for Model I Contax, £2 10s. Extra Slides to fit any model Contax plate back, 5s. 6d. each.

LEICAS :

Leica Model IIIa, f/2 Summar lens, ever-ready case. As new in every way.....£35 10 0
Leica Model III, chromium, f/2 Summar lens. As new £31 10 0
Leica Model III, black, f/2 Summar lens. Practically as new £29 17 6
Leica Model III, chromium, f/3.5 Elmar lens. As new £24 15 0
Leica Model II, chromium, f/3.5 Elmar lens. As new £21 10 0
Leica Model II, black, fitted special magnification for range-finder, f/3.5 Elmar lens. Ex. condition £19 10 0
Leica Model I, non-interchangeable, f/3.5 Elmar, case. Good condition £7 15 0
Leitz 5-cm. f/2 Summar, non-collapsible.....£9 17 6
Leitz 9-cm. f/4 Elmar. As new.....£8 17 0
Leitz 13.5-cm. f/4.5 Elmar, coupled. Practically as new £10 7 6
Leitz 13.5-cm. f/4.5 Hektor, coupled (chromium). As new £14 10 0
Universal Finder, black, as new, £3; Chromium Angular Finder, as new, 32s. 6d.; Negative Viewer with opal plate, 32s. 6d.; Flashlight Attachment, £3 7 6

Other Miniature Cameras fitted with coupled range-finders :

Nettax (only a few weeks old), 2 filters, ever-ready case. As new. Cost £34 10s.....£26 10 0
Super Nettel, f 2.8 Tessar, case. As new ..£17 10 0
Dollina II, f/2.8 Tessar. As new.....£13 17 6
Voigtlander Super Bessa, f/4.5 Helomar lens, filter, Compur Rapid. As new.....£12 10 0
Super Ikonta 530/16, f/2.8 Tessar. As new..£20 0 0
Super Ikonta 530/2, f/3.8 Tessar, Rapid Compur, ever-ready case. As new.....£17 17 6
Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, case. As new.....£13 18 6
Super Ikonta 530/2, f/4.5 Tessar, normal Compur, case. As new.....£13 0 0
Plaubel Roll-Op, fitted f/2.8 Anticomar lens. As new £15 15 0

MINIATURE REFLEXES :

Welta Superfekta, f/2.8 Tessar. As new.....£18 10 0
Primarflex, f/3.5 Tessar. As new.....£27 10 0
Exakta Model C, latest lever wind, f/2.8 Tessar, 3 slides and focussing screen. As new.....£24 10 0
Exakta Model B, latest lever wind, f/2.8 Tessar, case. As new.....£22 10 0
Exakta Model B, latest lever wind, f/3.5 Exaktar lens. As new.....£15 15 0
Exakta Model B, f/1.9 Dallmeyer Super-Six, case. Practically as new.....£25 10 0
Exakta Model A, latest lever wind, f/1.9 Dallmeyer Super-Six. As new.....£21 10 0

MINIATURE REFLEXES (contd.) :

Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6
Exakta Model A, f/2.9 Xenar. Excellent condition £13 17 6
Exakta Junior Model, f/4.5 Trioplan. Excellent condition.....£7 10 0
6-in. f/5.6 Dallon Telephoto for Exakta. As new £6 10 0
6-in. f/5.5 Hugo Meyer Tele-Megor for Exakta. As new.....£8 10 0
Sashalite Synchronised Flash Attachment for Exakta 30s. 0d.
Voigtlander Brilliant, f/4.5 Skopar, Compur. As new £3 19 6
Reflex-Korelle, latest type, f/2.8 Tessar. As new £15 10 0
Pilot, f/3.5 Tessar, Compur. Excellent condition £11 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur Rapid, ever-ready case. As new.....£19 17 6
Automatic Rolleiflex 6×6, f/3.8 Tessar, Compur, ever-ready case. Excellent condition.....£15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new.....£19 17 6
Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6
Rolleicord II, f/4.5 Triotar, case. As new..£11 15 0
Rolleicord II, f/3.5 Triotar, case. As new..£13 17 6
Noviflex, f/2.9 Trioplan, filter, case. As new..£9 17 6
Voigtlander Superb, f/3.5 Heliar, ever-ready case. As new.....£13 17 6
Weltur Superfekta, f/2.8 Tessar, 2 filters. As new £18 15 0
Rubyette Model II, revolving back, f/4.5 Dallmeyer lens, 3 slides. As new.....£8 17 6

MISCELLANEOUS :

Baby Ikonta, f/3.5 Tessar, Rapid Compur, 3 filters. As new.....£8 5 0
Plaubel Makina, Model II, f/2.9 Anticomar lens, coupled range-finder, 3 slides and F.P.A.....£25 0 0
Tele-Makinar Lens, for Makina. As new..£7 15 0
Planovista, only a few weeks old, f/2.7 Plasmat, Rapid Compur, case. As new.....£11 15 0
Planovista, f/3.5 Trioplan. As new.....£8 10 0
Dollina I, f/2.9 Radionar, Compur shutter. As new £6 17 6
Kodak Retina, f/3.5 Xenar, filter, case.....£6 19 6
Kodak 620 Duo, f/4.5 lens, 6-speed shutter. As new £4 0 0
Kodak 620 Duo, f/4.5 lens, Compur shutter. As new £6 18 6
Kodak 620 Duo, f/3.5 lens, Compur shutter, case. As new.....£7 17 6

ELECTRIC EXPOSURE METERS :

All guaranteed to be as new.

Photoskop in case (cost £5 5s.), £1 5s.; New Model Avo, £2; Zeiss Helios, £3 5s.; Weston Model 627 (latest but one), Universal, £3; Leicameter, £3; Sixtus, £3 18s. 6d.; Prinsen, £2; Largodrem, 17s. 6d.

ENLARGERS :

Valoy. As new.....£7 15 0
Leitz Fylad, to take Leica lens.....£6 5 0
Filmarex O, latest model, fitted f/4.5 lens with diaphragm, condenser and special negative carrier. As new £8 17 6
Praxidos Automatic, 6×6, No. 506, with tall lamp-house and double condenser. Cost £21 13s. 6d. As new £15 15 0
Ensign Automatic Miniature Magnaprint. As new £6 5 0
Miniature Magnaprint, f/4.5 Dallmeyer lens. As new £4 17 6
Miraphot Automatic Model for 6×6 negatives, f/3.5 Tessar lens.....£7 15 0
Write for our special booklet ("Miniature Enlargers") in which all types of instruments are fully described and discussed.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

The Miniature Camera *in a* Printing Works

By
BERNARD ALFIERI, Jun.

SERIES of pictures illustrating work in factories—intimate photographs taken in the heart of industry—are as instructive as they are often difficult to obtain. Much of the interesting work and machinery is located in dark places, and although it is often possible to obtain permission to visit particular factories, it is quite another thing to expect to hold up production, or make elaborate lighting arrangements whilst work is in progress, while to try to stage a picture when the works are closed down is to obtain the shell without the life and atmosphere of the subject.

Fig. 1. Linotype Machines in action.

The miniature camera is often permitted when bigger apparatus would be out of the question, and, due to the large lens apertures combined with great depth of focus, the maximum can be achieved with the minimum amount of light.

Printing a Newspaper.

The accompanying photographs were taken by courtesy of Messrs. Knapp Drewett & Sons, Ltd., during the printing of the *Surrey Comet*, and are part of a complete set showing the various operations in the production of a newspaper.

They were taken at night whilst the work was in progress. Light, in addition to the ordinary lighting in the works which in most cases was of very little help, was provided by a 500-watt bulb of the photographic type held in a hand reflector unit.

Fig. 1 shows the backs of a battery of linotype machines, taken at 1/60th sec., f/2. It will be seen that the shutter speed was not sufficient to arrest the movement of the rapidly rotating wheels in the foreground, but the general effect of the machines is one of action, and the 5-cm. Summar lens offers enormous depth of focus even at this very large stop.

Fig. 2 shows a sheet of special material (dry flong) being placed over type. This will be passed through the press seen in the picture, and will retain an impression which will be used as a mould to cast the stereo plate. In this picture a very bright lamp was hanging in such a position that it offered a good general flood, and the photographic lamp was used on the left-hand side to produce the modelling.

For Rotary Printing.

Fig. 3 shows the curved casting being taken out of the stereo press, and was lit from the top right. In this case the lens was stopped down to about f/4.5 and the exposure was 1/20th sec. Fig. 4 is a view through a big rotary printing machine; the plates can be seen mounted on the cylinder which works against the inking rollers on the right-hand side.

The set of negatives were taken on very rapid panchromatic film, the fastest available, and although more grain must be expected under these conditions than would have been obtained had a slower fine-grain film been used, they will all enlarge up to 15 × 12 without showing an excess of grain.

Fig. 2. Making a Mould of the type in Dry Flong.

Specially difficult pictures can sometimes be obtained with a synchronised flash-bulb, whilst subjects where quick exposures are not required are often best if taken with the ordinary lighting available. The human element puts added interest into pictures of this type, and often the inclusion of steam, or directly back lighting part of a subject, will add to the atmosphere and general interest in the photograph. Wherever possible it is a wise precaution to use the camera on a tripod, or rest it against something whilst making the exposure, although if there is any vibration it is sometimes easier to hold the instrument in the hand. Most of these pictures depend for their success in having some part of the subject absolutely sharp, not only sharp as we often define it, but so crisp that the detail can be almost felt. This is dependent not only on critical focussing, where the miniature camera is specially helpful, but also on the lighting arrangements. The soft diffused light, nicely balanced as in portraiture, would be useless here. The hard type of lighting that is best under these conditions can be obtained by a general flood often already found on the spot, combined with a really brilliant single source of light used at an angle of roughly 45 degrees. This will not only give roundness and modelling, but if used as far away as possible it will produce those crisp and hard shadows that are usually associated with mechanical precision in any form.

Fig. 3. Taking the Casting from the Stereo Press.

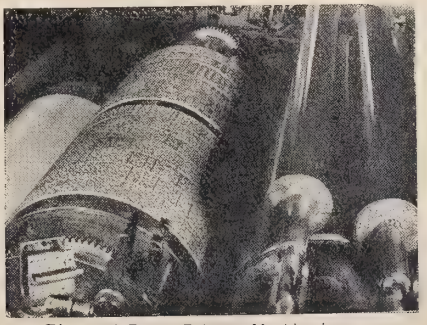

Fig. 4. A Rotary Printing Machine in action.

Independent Winding of the Leica Shutter

By JOHN WINNERY.

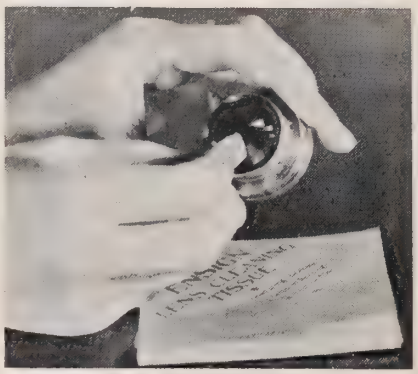
Winding the Leica shutter without moving on the film.

THE focal-plane shutter of a Leica is coupled with the film transmission, and, like other shutters of a similar construction, it depends for its action on the compression of a spring. Although neglect will probably not cause any great harm, it is not wise to leave the shutter in a wound position for very long periods, and after use it is as well to cap the lens and make an additional exposure if the film is not exhausted. In this way the shutter spring is not left under tension, but most users of the camera would complain that one frame has been wasted in achieving this.

It is not generally known that the shutter can be wound again without moving on the film. To do this the release button should be depressed, and the shutter speed knob rotated in an anti-clockwise direction until a faint click is heard, when the button is released. By this method the blind will be wound without moving on the film, and the shutter will be set to the same speed as before the blank exposure was made. In the set position, the shutter speed can be altered in the usual manner if desired before making the new exposure.

Recourse can be had to this method where double exposures or "ghost effects" are required. Amusing photographs can be obtained in this manner, where a setting or background is exposed first, and then the shutter rewound without moving on the film. Figures are next photographed in appropriate positions in front of a black background, which when developed on the same negative will appear transparent. Also such little dodges as photographing battleships sailing through a busy shopping centre will create amusement, even if they are not accepted by the serious pictorial worker.

TAKING CARE OF THE LENS



By ARTHUR FREEMAN.

ONE of the most essential virtues of the miniature camera is its exceptional crispness of focus, and the definition which will allow enormous enlargements to be made from such small negatives—in other words, the excellence of the lens. It therefore behoves us to take great care of this component and treat it with the respect due to fine craftsmanship.

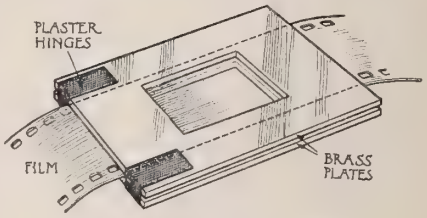
Whilst it is essential to keep the lens free from dirt or film, great care must be taken not to spoil the high optical polish. One of the safest ways is to remove the lens from the camera at regular intervals, brush both sides carefully with a camel-hair brush, breathe upon the glass, and gently rub it with a wad of Japanese tissue. This specially soft material can be purchased from most camera dealers in book form for a few pence, and a book carried in the back of the camera case is a useful precaution against lens scum or film.

Where a lens shutter is employed, it is safe to remove the cells in order to clean both sides, but in the case of some cameras, such as the Leica, it is sufficient to unscrew the lens as a whole and just clean both surfaces.

Particularly in the winter months, when the instrument may undergo severe changes of temperature by being brought from a cold atmosphere into a hot room, the lens is likely to steam over. It then collects in the moisture

Using lens-cleaning tissue.

particles of dirt, which dry into a thin scum difficult to remove unless the lens is carefully wiped before it dries.



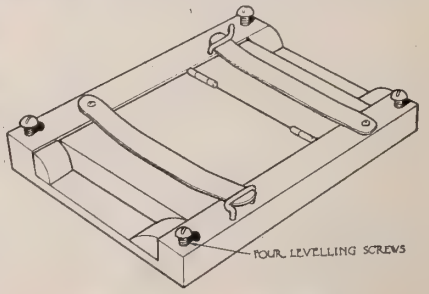
Most of these remarks can be applied to the lens of a miniature enlarger. When enlarging from damp negatives, the heat of the lamp will sometimes cause slight steam to condense on the inside surface, whilst heat from the hand during focussing can produce the same effect on the outside glass. For this reason it is a convenience to hang up a book of Japanese tissue near the enlarger to checkmate one's natural tendency to employ a pocket handkerchief to avoid the effort of hunting for better material.

Two Enlarging Hints

By W. M. RICHARDSON.

Avoiding Dust on the Negative.

READERS who enlarge their miniature negatives probably find it difficult to keep the negative carrier free from particles of dust, fine hairs, etc. I have overcome this difficulty by dispensing with the glass altogether, and if the existing carrier does



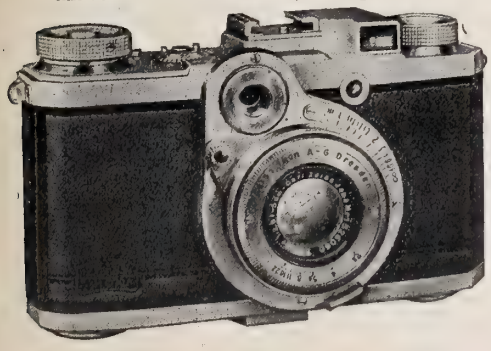
A Glass-less Film Carrier.

not lend itself to this alteration, a new carrier is easily constructed. Two pieces of brass, the size of the old carrier, are obtained, and the necessary opening cut in both pieces, the size of which is determined by the negative. Finish off with emery cloth and metal polish, and see that there are no sharp edges anywhere. A very simple hinge, which will be found quite durable, can be made with two pieces of adhesive plaster. It will be found that the film can easily be slid along for each succeeding exposure without the slightest risk of damage; it will hold the film perfectly flat, and I have had one in constant use for nearly two years.

A Good Use for a Printing Frame.

Another useful tip when enlarging a number of negatives from miniature size in a vertical enlarger, to, say, quarter-plate or postcard, is to place the bromide paper in a printing frame of the chosen size, first making certain that the frame will not wobble when placed in this

A Simple Paper-holder and Mask.



position. Four wood screws, one in each corner, will ensure this. In this way, a perfect border for the enlargement is obtained, and the frame can be moved about to include the correct portion of the negative required. The enlarger, of course, should be focussed with the printing frame in position.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Modern Miniature Cameras

THE "NETTAX"

THE latest addition to the Zeiss Ikon family of miniature cameras is the "Nettax." This little instrument is first cousin to both the Contax and the Super Nettel series. It takes 35-mm. ciné film in standard cassettes, cartridges or Contax

spools, and the negatives produced are 24 × 36 mm. It is slightly smaller in bulk than the Contax, and is definitely pleasant and easy to handle.

Its optical equipment and lens adjustment are similar to the Contax. The lens is fitted in a collapsible tubular mount which is pulled out and with a slight turn locked in position for use. Focussing is then effected by movement of a lever that is part of the lens mount. Rotating this focusses the lens and operates the built-in short-base range-finder which forms part of the camera body.

The distance meter is so constructed to be mechanically coupled with any of the lenses that are interchangeable on the camera. These are the Tessar f/2.8 or Tessar f/3.5 of 2-in. focal length, either of which is fitted as standard, or the Tessar f/8 of 1⅛-in. focal length for wide-angle work, or the Triotar f/5.6 4½-in. focal length for distance work. All are fitted with bayonet joint attachment.

The body of the "Nettax" is similar in detail to that of the Super Nettel II. The metal focal-plane shutter has speeds 1/5th second to 1/1,000th second and "time." Setting the shutter automatically changes the film for the next exposure—which is registered on a counting disc. The shutter release is conveniently placed for the finger.

The back of the camera is detachable for easy insertion of the film spools and for cleaning, etc. The back may be replaced if required by a plate adapter back, and the special shoe by the finder on the top will take a number of accessories, such as the Albada sports view-finder, the Contameter, exposure meters, or the oblique viewer for "round-the-corner" photography. The finish is black and chromium.

The "Nettax" is an example of fine construction and attention to detail that is associated with the firm of Zeiss Ikon, and it is another notable addition to their series of precision miniature cameras. The prices are :—

With Zeiss Tessar f/3.5, 2 in., £29 5s.
With Zeiss Tessar f/2.8, 2 in., £32 10s.
Ever-ready case, £1 19s. extra.

Further particulars of the "Nettax" and all accessories will be supplied on application to Zeiss Ikon Ltd., Mortimer House, 37–41, Mortimer Street, London, W.1.

In buying bromide paper, remember that it is more useful to have three packets of different grades of contrast than to have three packets of different surfaces. Unless you are prepared to carry large stocks, choose a surface acceptable for all-round use, and stick to it except for special purposes.

When enlarging, make sure that negative, condenser and film-carrier are all free from dust. It is better to spend half a minute in dusting than half an hour in spotting the final prints.

Miniature Camera Gossip

By LANCELOT VINING.

Bergner Premiére.

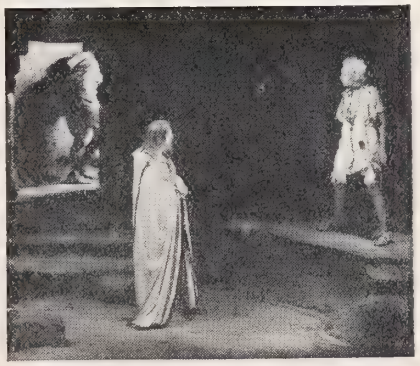
MY Contax was taxed to the limit during my visit to Edinburgh for the oft-postponed production of Sir James Barrie's "The Boy David." On arrival I found that I had been allotted standing-room in the circle, and when in the theatre I found that the lighting, though artistic, was not at all bright. So I was up against a real photographic problem.

Miniature camera shutters seemed to be clicking in all quarters and I must own to being rather nervous of the ones in the stalls, which is the spot I would have chosen had I been able to. But an inspection of the Monday's daily papers gave me a very happy feeling—the kind you get when you find you have been able to solve a problem, whilst the majority of your rivals had failed.

That Scoop Picture.

On my way north I planned a picture of the type Art Editors grab with both hands. I would get Elisabeth Bergner to mount the ass, at its head I would place the author, Sir James Barrie, and somewhere in the region of the tail would be a very broad smile behind which would be found Mr. C. B. Cochran.

Upon arrival I put my proposal



Through the hoop at Gamages Circus.

before the great C. B. C. with all the enthusiasm I could muster. His reply was very terse. Sir James was in bed with severe lumbago, Elisabeth would throw a fit at the sight of a camera and refuse to appear. He said that even the ass would kick at the suggestion (I do not know how he found this out), so I had to be satisfied with the broad smile.

When I got back to town I was feeling very depressed, so that I was more than glad when I ran into an anti-cyclone in the shape of James Jarché. In the course of a long and comfortable conversation, conducted in the largest armchairs we could find in the hotel lounge, I gleaned from him two items of news which may interest you.

New Developers.

Kodak have a new fine-grain developer, and their research department sent him a very liberal quantity of it to try. He is very enthusiastic about it, has written for more and is begging them to put it on the market. My letter asking for a

Elisabeth Bergner as "The Boy David," Sonnar 3½-in. lens, at f/2.

sample is in the post, and when I have given it a good trial you shall hear all about it.

The other news is that another research firm are experimenting with treacle in the developer to reduce grain. This is an old idea, revived by "The A.P." a few weeks ago ("Topics of the Week," November 4th). At the "Royal" dinner recently the President said "Photography has passed from the messy stage, etc., etc."; but it seems to me that if in the future we are to start mixing treacle with our developers, we shall certainly be returning to the messy stage again. And what is going to happen if my dark-room assistant has a sweet tooth?

Seasonable Subjects.

Nearly all the big stores at the present time are providing countless subjects for some real "human interest" studies, which are to be found where shoppers are selecting their Christmas gifts. You will find the light is always good, and well suited to the fast pan. film; I quite expect that in the future many of these new subjects will appear in the exhibitions and meet with a fair share of success.

At Gamages you will find a miniature circus. What better subject could there be for a "try-out" in preparation for the full-size one which opens at Olympia at Christmas?

In taking portraits, do not forget that film is cheap and sitters hard to please. Make plenty of exposures, then, and when offering proofs be tactful enough to suppress the more libellous ones.

Depth of Focus and *Speed*

WHERE THE MINIATURE SCORES.

THE most usually claimed advantage of the miniature camera is the increased depth of focus given by the short-focus lens, but it is not always realised what a very important advantage this increased depth really is.

The matter can be looked at in either of two ways. First, let us make a comparison between two photographs of a figure with the bushes, trees, and other surroundings of a garden as background. The figure—human or animal—is standing on the lawn. All we really want is a sharp picture of the figure, for which even a ¼-plate camera would have depth of focus enough.

The Line of Sharp Focus.

So far, so good—but what of the surroundings? The quarter-plate camera shows the grass as a blur, except at the exact distance of the figure, which stands on a clearly-marked and very noticeable line of sharply defined grass that runs across the picture from left to right. This is specially marked in a photograph taken, as one of a cat or dog might be, from a low viewpoint. Does that hard line of sharp focus, so prominent in the print, really exist in the original subject as the eye sees it? Of course not—the human eye is itself a miniature camera, and has far too much depth of focus ever to see a lawn in such a way.

And the background? With this quarter-plate camera, its lens used at f/4.5 or larger, the trees or bushes behind the figure are so completely out of focus that they become a series of round blobs of light and dark, overlapping and interlacing. Is *that* natural? Look at such a subject, and while keeping your eyes firmly on the figure allow the attention to wander to the background and notice how it appears. It will be a little ill-defined—but no human eye has ever seen the queer futuristic pattern of bright blobs, utterly unrecognisable as trees or bushes, that the quarter-plate negative serves up as a "reproduction" of the background.

Compare the photograph we have been describing—with, perhaps, a little exaggeration to make our point clear—with that taken by a miniature camera at the same lens-aperture. The hard line of sharp focus across the lawn has vanished; as before, it is sharp where the figure is standing, and unsharp elsewhere, but the apparently sudden transition from sharp to fuzzy is no longer there. The background, too, is no longer a series of meaningless crazy blobs, but is just what it should be—a tree and some bushes softly defined, but still unmistakably tree and bushes. Even now it is not quite what the eye sees, but at least it is much closer to reality than the picture taken with the larger camera.

Small Size, High Speed.

It is quite true that this camera could have been made to give the same result as the small by stopping down the lens to increase the depth of focus. That brings us to the second aspect of the value of depth—its value in terms of *speed*.

Suppose that the photograph that so pleased us when taken with the miniature camera was taken at 1/50th sec. at f/4.5, using the usual 2-in. lens of the true miniature. To get the same angle of view on a quarter-plate a lens of 6½-in. focal length would be used; for the same depth of focus as the miniature lens at f/6.3 this would have to be stopped down to about f/14, and the exposure required, instead of 1/50th sec., would be 1/5th sec.

A miniature camera using a 5-cm. lens is thus *ten times as fast as a quarter-plate camera* when the latter is so used as to get an identical result.

In "Facts and Formulæ," on page 574 of this issue, will be found a comparison of the relative speeds of cameras of all sizes from half-plate to 24 × 36 mm.

A. L. M. S.

***Fine-Grain Developers* (5).**

MORE METOL-HYDROQUINONE-BORAX FORMULÆ.

OF the following developers two belong to the modern high sulphite-concentration class, but the first, which was first published some years ago, contains much less sulphite and much more borax than the usual fine-grain developer. It is in consequence fast-working, but probably does not give the finest attainable grain. With fine-grain films, however, it might be a very successful developer. The remaining two formulæ belong to the modern type of fine-grain developer of high sulphite concentration. Owing to its higher proportion of metol, we should expect G.D. 206 to permit slightly shorter exposures than G.D. 205.

Wellington M.Q. Borax Formula.

Metol	18 grs.	(2 grm.)
Sodium sulphite (anhydrous)	90 grs.	(10 grm.)
Hydroquinone	18 grs.	(2 grm.)
Borax	180 grs.	(20 grm.)
Water	20 oz.	(1,000 c.c.)

Development time is from 3 to 5 minutes at 65 degrees Fahr.

The composition of this developer is such as to suggest that the fineness of grain will hardly suffer if it is diluted for tank use.

Gevaert Soft-Working Fine-Grain Tank Developer G.D. 206.

Metol	35 grs.	(4 grm.)
Sodium sulphite (anhydrous)	2 oz.	(105 grm.)
Hydroquinone	18 grs.	(2 grm.)
Borax	18 grs.	(2 grm.)
Water	20 oz.	(1,000 c.c.)

This developer is intended to be diluted with three times its own volume of water for use in a tank, in which case the time of development required will be about 30 minutes at 65 degrees Fahr.

The composition of this developer, however, suggests that it might give finer grain if used at full strength, developing for from 6 to 8 minutes at 65 degrees Fahr.

Gevaert Fine-Grain Formula G.D. 205.

Metol	18 grs.	(2 grm.)
Sodium sulphite (anhydrous)	600 grs.	(70 grm.)
Hydroquinone	50 grs.	(6 grm.)
Borax	18 grs.	(2 grm.)
Water	20 oz.	(1,000 c.c.)

Development time, about 20 minutes at 65 degrees Fahr.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

BUYING 35-mm. FILM.

I have just bought a ciné-film miniature. I notice that films for it can be bought in cassettes, in cut lengths ready for insertion in the camera's own chargers, or in rolls of 15 or 50 ft. What are the advantages and disadvantages of these various methods of buying film? A. N. (*Cork.*)

There is only one disadvantage in the cassette, and that is that you have to buy a new one with every film. Cut lengths, ready trimmed for the camera's own chargers, are considerably cheaper. At standard prices, film in the length is practically identical in price with the cut lengths, but it does offer the advantage that if you so desire you can fill your chargers with short lengths for six, twelve or any other number of exposures that you may happen to need. Advertisers occasionally offer 35-mm. ciné film, possibly derived from professional "movie" studios, at quite low prices, and you might like to be in a position to use this, if only for experimental purposes.

MAKER'S NAME WANTED.

Can you give me the name and address of the makers of the "Beira" miniature camera? F. C. (Brighton.)

The "Beira" camera, which belongs to the class of ciné-film miniatures taking photographs 36 × 24 mm. in size, is made abroad. The English agents, from whom you can obtain all information about the camera, are Messrs. Luminos, Ltd., of 22, Bartlett's Buildings, Holborn Circus, London, E.C.4.

STOPS IN ENLARGING.

My miniature vertical enlarger uses the lens from the camera which, of course, has an iris diaphragm. Should I stop down when enlarging, or should I expect the lens to give perfect definition at full aperture? E. S. (*Sidcup.*)

If your focussing is correct, stopping down will not improve the definition when using a first-grade lens, but it is often difficult to see when a negative is focussed exactly. In order to ensure perfect sharpness, it is a good plan to focus at full aperture and then stop the lens down a little.

When making small enlargements from thin negatives you may find that the exposure required is only a second or so at full aperture. It is then convenient to stop down so as to bring the exposure up to about five seconds, which is very much easier to time with accuracy. But when making big enlargements, especially from dense negatives, one would focus with every care and not stop down, so keeping the exposure reasonably short. Further use of the stops is in connection with shading, which is difficult to do with an exposure much under 15 or 30 seconds. Where you have tilted the easel in order to correct converging verticals, you may find that the smallest stop of your lens is required for all-over sharpness.

NEWTON'S RINGS.

A few of my enlargements are disfigured with a series of rather faint concentric rings, alternately lighter and darker than their surroundings. Sometimes these rings are nearly circular—more often distorted, but they remain more or less concentric. To what are they due, and how can I avoid them? They are not visible on the negative. J. M. (*Exeter.*)

These rings are known as Newton's rings, since it was he who first discovered them. They owe their origin to interference between the direct ray of light and a ray reflected twice at the surface where film and glass meet. Where film and glass are in perfect vertical contact the interference does not occur, but appears when there is a separation equal to about quarter of a wave-length of light.

The rings often appear where the film and the glass are held apart by a tiny speck of dust, though they may equally occur where the pressure of the springs fail to drive the film into complete contact with the glass owing to the stiffness of the film.

This description of their origin makes it clear that the rings can be avoided either by forcing the film into perfect optical contact with the glass, or by preventing them from touching at all. The latter method is usually the most practical, and a mask of thick celluloid or other convenient material between film and glass is generally a cure.

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXII.

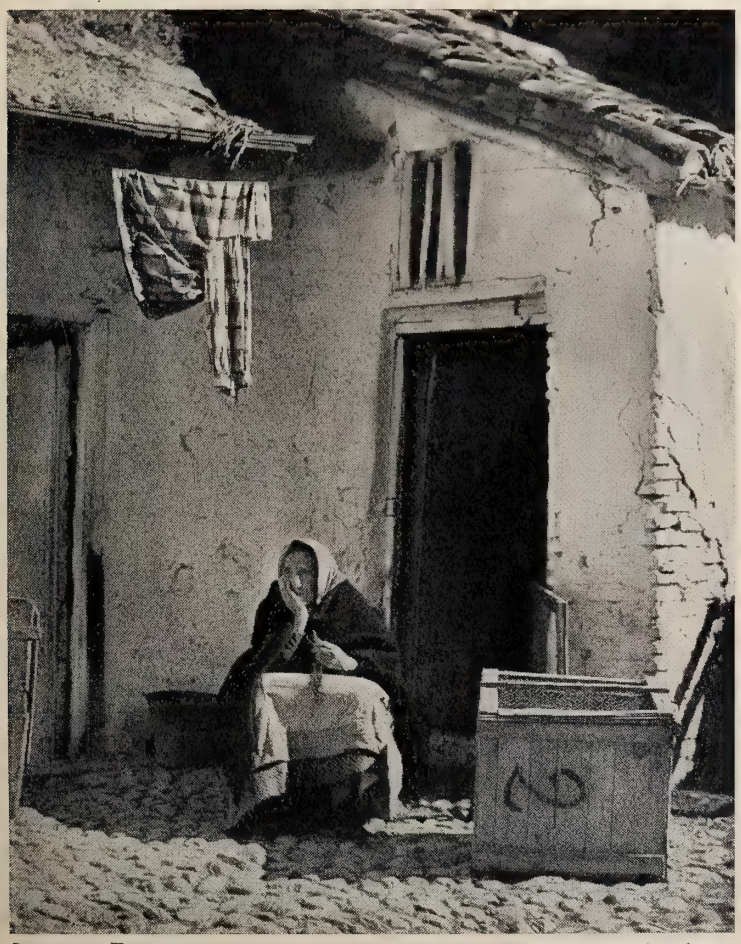
Lt.-Col. H. F. COLLINGRIDGE

From information communicated to our Special Representative.

"IT is difficult to follow in the footsteps of so many workers of the first rank who have contributed to this series, but I hope that in these notes some may be of interest. I use a $3\frac{1}{2} \times 2\frac{1}{2}$ or 9×12 cm. reflex, and nothing but panchromatic plates except for enlarging negatives or copying. I aim at fairly plucky negatives, as they seem to suit my condenser enlarger fitted with a strong but well-diffused light.

"I always desensitise in order to see and control the negative. With subjects that have possibilities of an exhibition picture I prefer individual development by inspection, and often employ the water-bath method with certain subjects. It is most useful, as it prevents the highlights running away, and brings out shadow detail.

"If three or four plates are developed together in a tank I desensitise first in the tank, and transfer them to a large dish when development has progressed about half-way. This combined tank and dish method makes individual control possible. Using a bright green Ilford safe-light, I keep the dish covered except when I quickly examine a plate.



"Most of my enlarging is on bromide paper, and for this I use a bright yellow safe-light. In the case of the test strip development is watched carefully, but for the large print the dish is covered up with a piece of three-ply wood, and the print is examined for the first time at the end of a minute, shown by the dark-room clock. Development is continued for as long as three minutes, using the exact strength the makers recommend. The prints do not stain provided the developer is fresh, and being covered up they show no sign of fog.

"The reason for doing this is to bring out the whole range of tones the paper is capable of producing. If development is complete in about two minutes I consider the exposure has been too long. Exposure is done by counting seconds, which obviates straining one's eyes looking at a clock, and allows one to concentrate on local shading, extra exposure, etc. Details of grade of paper, aperture, exposure and any local control are tabulated in a book, so that further prints can be made without repeating a test strip.

"If a landscape has not got a good sky in the negative I put one in from a different negative. As regards finishing, very few prints are not improved either by emphasising important highlights with ferricyanide, or by subduing unwanted ones by oil reinforcement or charcoal and stump.

"I have found it a great help in producing exhibition prints to make prints also for various competitions. 'In Quiet Waters' is an example, this being a prize-winner in the *Weekly Illustrated*, and is reproduced by courtesy of the *Daily Herald*. I should also like to say how much I owe to *The Amateur Photographer*. It has helped me enormously, and though I have taken it in for a great many years there is always something new to learn."

(A further example of Lt.-Col. H. F. Collingridge's work is reproduced on one of the centre Art pages.)

SPANISH TRAGEDY. *H. F. Collingridge.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"CATALAN FISHERMAN," *by Leo A. Leigh.*

BESIDES forming an excellent study of a type, this subject is also notable in that it conveys a fine impression of sunlight and the open air, while the representation of action is interesting and lends a considerable attraction to the literary content.

It is by no means an easy subject to handle. It is necessary, in order that the nature of the work upon which the figure is engaged may be clearly disclosed, that the lobster-pot—if that is what the basket-work structure is—should be well in evidence, and, on account of its bulk, the placing of the figure, which is, of course, the more important element, demands a considerable amount of judgment. It must be sufficiently "in" the picture to prevent its priority being impaired, but, because of the lobster-pot, it must be placed much more to the right and nearer the edge than usual.

In the ordinary way, such a position would involve some loss of significance, but, in this instance, any such loss has been retrieved by two factors, the first of which is the placing of the head on a diagonal, and the second is the extension of the arms and legs toward the opposite side. If the top right and bottom left-hand corners be joined up, the connecting line will pass through the head. The same line passes through two of the intersections formed by divisions of thirds vertically and horizontally, the points in question being sufficiently off the centre to avoid a feeling of symmetry, and far enough from the edge to counter any suggestion of weakness. They therefore provide suitable positions for the centre of interest, and, in fact, are usually referred to as the "strong points" of a picture. It is not necessary, however, that the centre of interest should be precisely placed on one of these points. It is quite sufficient if it is in the near vicinity, but, when it happens to fall on a diagonal, a sort of imaginary connection seems to be implied and permits the centre of attraction to be placed farther from one of the points of intersection than would otherwise be the case.

Whether knowingly or simply through an instinctive feeling of rightness, such a position has been chosen in this instance, and it is mainly on this ground that the placing of the figure is justified. The second factor—the extension of the limbs towards the centre—acts in a similar way in that they also suggest a connection—actual in this case—between the figure and the upper and lower points of intersection on the right-hand side.

But it might be said that the basket-work does cover the opposite two points on the left-hand side and is therefore more strongly placed than the figure. If placing were everything, this would be true enough, but the factor of chiaroscuro—or the arrangement of light and shade—also has an influence that is very considerable. All the weight of tone rests with the figure. In a scheme that is mainly half-tone, the darks contained within his outline far outweigh any tone elsewhere, and the most brilliant lights are those of his shirt. These lights have also an attraction that, if anything, is greater than that of the darks, and the contrast of extremes of tone in the same outline causes both attractions to be united. The concentration of interest so created is most powerful, and, in view of the lack of any similar attraction in the lobster-pot, the supremacy of the figure is unquestionable.

The lobster-pot simply does not count in comparison, and its placing is therefore immaterial. Besides all this, the figure has the advantage of human interest, which, in the natural order of things, confers an attraction vastly in excess of that of any inanimate element. At the same time, and although the composition is quite successful as it stands, there is just a hint of restriction in the small amount of space allotted to the setting, and if there are no undesirable features just outside that would be introduced by the adjustment, it would be as well, if the negative permits, if something like half an inch were added to the top and right-hand side.

The alteration would have the effect of bringing the figure more in the picture, would avoid the suggestion of restraint, and would retain the better features of the present relationship of elements, without disadvantage.

Technically, the rendering is particularly interesting on account of its presentation of shadow detail—as disclosed in the darker tones of the face—and in the way the light and shade on the shirt is recorded in comparison with the deeper tones of the sky. The exposure must have been calculated with precision, and printing must have received equivalent attention.

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

STREET scenes are extremely fascinating subjects. There is always a chance of suitable figures turning up; the various effects of sunlight upon the buildings are most attractive; and the chasing of possibilities and the satisfaction that follows upon the seizing of an offered opportunity lends the pursuit an extraordinary charm.

Chance and Opportunity.

Of the examples reproduced on the opposite page, No. 8, "Sunshine in a Back Street," by C. E. Edgar, displays what is, perhaps, the best combination. The figure, despite a back view, is exceedingly well caught, and its scale is such as to represent a well-judged mean between over-assertion and insignificance.

It is just about the right size in relation to the rest of the material, and, while it is placed a trifle too near the centre, it does serve its purpose in providing an efficient centre of interest as well as lending point to the effect of sunshine.

The placing could be corrected by trimming about three-sixteenths of an inch from the left, and, if the tone of the sky were also lowered a little, a pleasing picture would result. Its success, however, chiefly rests upon the choice of a suitable figure at the right distance, and of a tone that contrasts well with the setting against which it is shown. The lines of the cottages, too, fall together very well, and, on the whole, it is an excellent example of its class.

In No. 2, "Balconies, Las Palmas," by C. H. Bartlett, the scale of the two central figures is not so important and those elsewhere are inclined to detract from their interest. If the two were alone the arrangement would seem better designed, and, while sunshine is present, it scarcely gets across with the same effect as No. 8.

Mood and the Subject.

The sunshine should be evident as a mood or effect of nature in order to confer a measure of pictorial appeal upon the work, but, as its main light comes against the sky, which is of practically the same tone, its chance of making itself felt is almost negligible. If it were rendered as it would appear—a distinct shade or so the brighter—the case would be different, and that such a rendering could have been achieved can be confirmed by reference to the reproduction of "Catalan Fisherman," which is the subject of our pictorial analysis this week.

The sunlight on the shirt in that case is noticeably brighter than the sky, and, in dealing with buildings of equal brilliance against a blue sky, a like distinction ought to be recorded.

A light filter suitably adjusted to the sensitive material is an aid in this direction. The angle of lighting also has an influence, but, if the distinction is visible, there should be no great difficulty in obtaining a perfectly true rendering. Still, the print is not devoid of sky tone, which is so much to the good, and, in that respect, it shows up favourably in comparison with some of the others on the page.

Brilliance by Contrast.

A measure of sky tone is just perceptible in No. 1, "Mermaid Street, Rye," by Miss P. Storey, but more is desirable. Nevertheless, the print does manage to attain a degree of brilliance, although this is provided rather by immediate contrast of tone than by comparison with the sky.

The dark timber-work of the cottage fronts forces up the lights on the adjoining plaster, and both gain in significance by the juxtaposition. It is well contrived, and the subject contains sufficient interest in itself to enable it to dispense with a figure or figures in embellishment. All the same, they would, if they could have been found, add a touch of life that would enhance the pictorial appeal, and, if the subject can be repeated, it might be as well to see what can be done in this direction.

No. 3, "Looking through the Arches," by Miss M. E. Shimmin, is pleasantly sunny, but seems to need a figure even more. The exclusion of the sky, no doubt, was well advised, but it is questionable if quite so much foreground is really necessary. In fact, it would seem that a better arrangement would be provided if the whole of the patch of sunlight in the immediate foreground had been omitted and an equivalent amount added to the top. The removal of the light at the base, besides conferring a greater measure of stability, would have the effect, also, of stressing the value of the remaining sunlight patches by power of restriction.

Restraint and Effect.

The effect would be enhanced by the restraint with which it would be employed, a fact which is well demonstrated by a comparison with No. 7, "A Somerset Cottage," by W. H. Bone.

In the latter, the area in sunshine is considerably greater than in No. 3, yet, despite the fact that it is helped by the foreground shadow at the base, the print does not convey the same feeling of sunshine. It is true that its somewhat harsh contrasts do not properly represent the mellow suggestion of sunlight as it ought to be recorded, and that its value, as it stands, is very much diminished by the aggressiveness of the sky; but, even if these faults were corrected, it is doubtful if the revised result would equal the attraction of the adjusted form of No. 3, simply because the area of sunlight is too great and not sufficiently balanced by an adequate amount of shadow tone.

"Tudor House" (No. 6), by J. L. Charlton, goes to the opposite extreme, and except for the sky, which is a good bit too bright for the rest, tends towards a flatness which seems to indicate the presence of underexposure. Moreover, there appears to be little reason for the long stretch of foreground, from which three-quarters of an inch could be trimmed with advantage.

Technique and the Print.

Nos. 4 and 5, "Castle Combe," by H. E. Paul, and "The Mill, Marlow," by E. D. Sheppard, are much better disposed and, as far as technique is concerned, do not offer any occasion for criticism.

They might, perhaps, be all the better for a bit more tone in the sky—the need for a filter seems indicated—but they are not entirely lacking in this direction, and, at any rate, they do convey something of a feeling of sunshine. Neither, however, can properly be described as street scenes and the question of the inclusion or omission of figures does not therefore arise.

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

PROFESSIONAL D. AND P. WORK.

THERE has been some interesting correspondence on the quality of D. and P. work, and I should like to chirp a bit to the same tune myself, as it is a matter of considerable importance to the beginner, especially at the very start. In spite of anything I may say here, I shall still advise anyone using a camera for the first time to have his negatives and prints done for him, provided that he takes every possible precaution to find someone who can be relied upon to do the work properly.

Making a Start.

It seems to me to be a wise course for the beginner to give all his attention to learning how to use his camera, how to select good subjects, and how to give exposures that will come within the margins of reasonable correctness, and to leave developing and printing to others. The results will show that he has made certain errors in handling his camera; that some of his subjects were ill-chosen; that many of his exposures were very wide of the mark. When he has got over these troubles and gets a good average of satisfactory results, then he should set to work and master developing and printing. Till he does this he cannot be a *photographer*.

I am not disposed to agree with a correspondent who claimed that D. and P. work abroad was better than in this country. In my opinion, if we take the whole of such work done at home, abroad, or on cruises, we shall in all cases find the same variations from excellent to hopelessly bad.

How it Began.

Let me go back a bit. When I started photography as a hobby I was one of a large number of amateurs all working on similar general lines. We used plates more than films, and developed them ourselves; and from the negatives we made our own prints, enlargements and lantern slides. We were entirely independent and self-reliant.

We may have been geese, some of us, but we kept the dealers well supplied with quite substantial golden eggs, and it is the fault of the dealers that as time went on that supply dwindled, and that the eggs were much smaller and only of brass. Many things the old-time amateur bought in large quantities have vanished entirely from the dealer's store. He still collects golden eggs, but from a very different source.

By degrees the practice grew up of handing over all developing and printing to be done by others, until to-day there is a vast system of mass production. In practically all forms of mass production there are certain advantages, but always drawbacks; and in this particular case I think the drawbacks are very serious. In the case of the best and highest forms of photography mass production is, of course, out of the question; but even in the mere turning out of haphazard snapshots by indifferent novices it is often unreliable and ineffective.

We should not expect anything else.

Just consider a few points in connection with this D. and P. work. To begin with it is very markedly seasonal. We who do our own work may carry on more or less steadily all the year round; but those who farm their work out are like the summer week-enders and holiday-makers.

If you went into a central developing and printing works on a Monday, after a fine week-end in the summer, you would be astounded at the avalanche of spools pouring in from the branches and collecting stations. However many thousands there may be, finished negatives and prints are expected back, whence they came, next day! I contend that it is absurd to expect that mass of work to be done properly, however perfect the plant and organisation, and however numerous and capable the staff.

Some Difficulties.

Good photography, even of the most straightforward kind, demands knowledge, experience and skill. We cannot expect these from girls who are taken on for a month or so in the summer, taught just enough to give them a chance to do a job mechanically and sent about their business when the rush is over. Yet this is exactly what happens in many establishments, and it is difficult to see any alternative.

I have just paused to refer to the first time and temperature table that came to hand. With the same fresh developer, used at 65° Fahr., I find three development times given for securing the same degree of contrast, namely 13, 19½ and 26 minutes. The difference is due to the varying development speeds of the films treated.

Very well; go back to that avalanche of spools. Are they sorted out according to development speed? Do they go into a tank of fresh developer? Does anyone time them to the half-minute? Does anyone know how long a film ought to be in a tank containing a solution of doubtful activity? Is it any wonder that a large proportion of the films are under- or over-developed?

I say that the very best of factories cannot do the best possible with the delicate operations of photography, under conditions of frantic haste, and with a large percentage of the "hands" semi-skilled or unskilled.

Good and Bad.

We must expect far less from inferior establishments. More than once I have been consulted by someone who proposes to start a D. and P. business, and asks what equipment is absolutely necessary, and what developer he ought to use. What sort of work is *he* likely to turn out? No wonder I see spools of panchromatic film turned into foggy positives by being put through the same treatment as ordinary films. There are some people doing photographic work, and charging for it, who would be better employed sorting rags and bones.

On several occasions, to obtain first-hand knowledge, I have had developing and printing done for me without disclosing my identity. To put it mildly the results have

been "mixed." The only wise thing to do with some of them was to destroy them.

On the other hand I have had special and difficult jobs done for me by persons and firms I have known, and the results have far transcended anything I could possibly achieve myself. But in such cases I have not rushed the experts for time, nor restricted them for price. This makes, and should make, all the difference.

Much of the unsatisfactory nature of some D. and P. work is due to the fact that dealers have pandered to the impatience of ignoramuses and have cut prices to an extent quite incompatible with skilful and honest workmanship. If the task of dealing with that spool avalanche were spread over a week, and two or three times the price charged for the results, we might fairly expect something better—and would almost certainly get it.

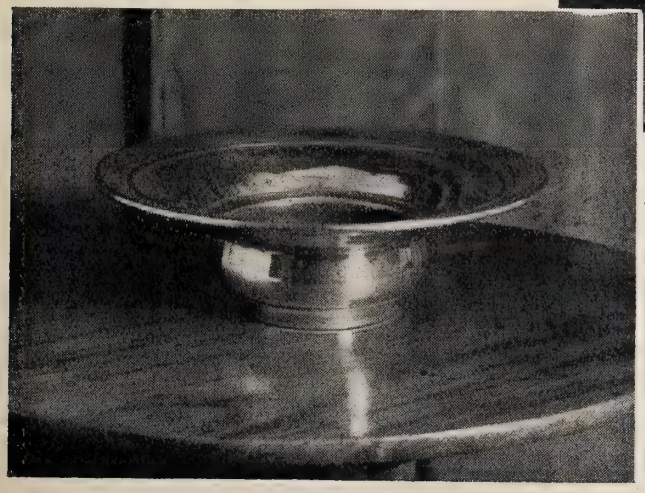
Once again my advice to the beginner is this. At the beginning, if you so choose, find a *good* D. and P. firm—for there *are* some—and take advantage of its services. Then, and as soon as possible, do everything yourself. Learn how to make a good negative, thoroughly fixed and washed, and free from defects caused by clumsy and ignorant handling. Don't rely on a tired girl at a printing machine to choose the best grade of paper and the right size and shape of the mask, and to give that little touch of shading or extra exposure that makes all the difference. Why should she learn to do all that, and why should she actually do it, for some minute fraction of a penny?

Speaking for myself, and quite bluntly, I regard the greater part of the D. and P. work done as a makeshift for the idle and indifferent, who have no right or title to the name of photographers, unless they use this sort of crutch merely as an aid to their first tottering steps. And if some people regard the work done as unreliable and poor at times, I fail to see, in present circumstances and conditions, how they can expect anything else. The marvel to me is that on the whole the results can be as good as they undoubtedly are.

W. L. F. W.

COPPER *and* BRASS

By MARTIN GRANT.



THERE are few households that do not treasure some antiques of metal, and at the present time there is a decided vogue for old copper and brass. Many of the articles that are now given an honoured place and receive the regular attentions of their owners (to keep them free from tarnish) were at one time common utensils for everyday use.

In most cases these old copper and brass articles—bowls, jugs, trays, warming pans, candlesticks, lanterns, etc.—are things of beauty, not only in their proportions but in their lustre and colour. This surface quality, in spite of their battered condition, responds in the most attractive fashion to the cleaning and polishing to which their new state in retirement entitles them.

To photograph these objects is a task presented at times to the amateur photographer, and, strangely enough, it is less difficult than many other "still-life" or "table-top" subjects; definitely easier than polished silver ware or glass. Both of these, unless their high-lights are dulled by some application of putty or other means, reflect far too much brilliant light and, mirror-like, may cause fog or halation. Not so with copper. Here is the ideal subject for treatment with a panchromatic plate, either by daylight or artificial light. The polished surfaces reflect back a red glow that photographs perfectly without a filter, and in a lesser degree the same applies to brass. Ordinary room lighting serves for these objects, but preferably brought as near as convenient to accentuate a high-light, using a sheet of white paper to light up the shadow side.

(1) *Old copper bowl and brass trays.*

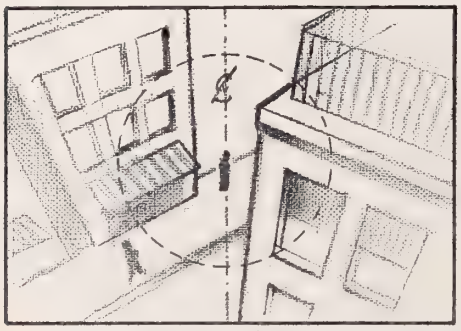
(2) *Antique brass bowl.*

If photographed alone or in groups, copper and brass articles will be seen to best advantage with a plain dark background.

Exposures are entirely a matter of experiment, as the factors of stop, light and film may vary considerably. The data for the accompanying illustrations will, however, serve as an approximate guide.

1.—100-watt reading lamp with reflector, hypersensitive pan. plate, f/11, 4 secs. exposure.

2.—Two 60-watt lamps, one high and one low, hypersensitive pan. plate, f/11, 3 secs.

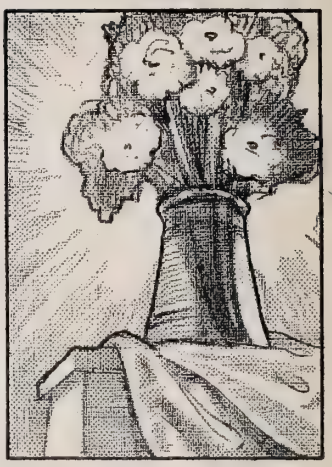


3.—Two 60-watt lamps, level, S.S. pan. film, f/11, 4 secs.

(3) *Two historic ship's lanterns. Copper.*

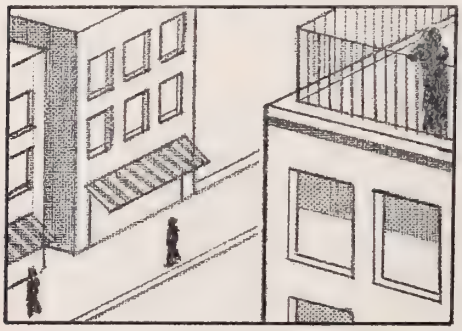
Picture Points

No. 28 (New Series) *by RICARDO*

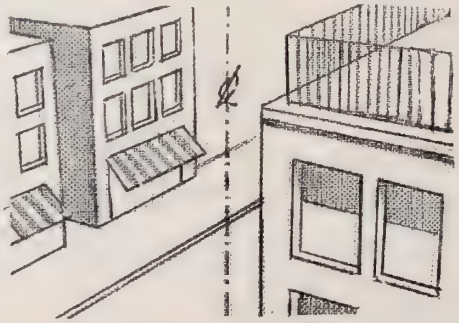


Perspective

—contd.

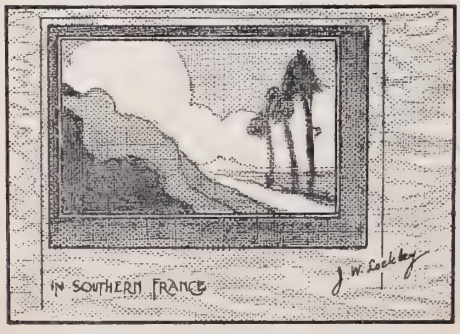


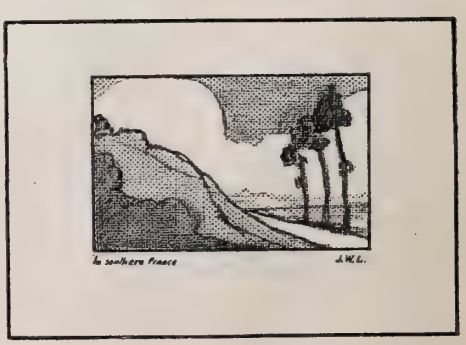
IN last week's series of "Picture Points" we discussed the first principles of perspective and showed how the horizontal and vertical lines all converge towards their respective common vanishing points.



It was also shown that the "verticals" in the high viewpoint of the buildings, although strictly correct in the angle of convergence, are by no means pleasant to look at on a print, because as soon as it is reproduced on a flat plane the eye can wander all over the surface and the nearer to the sides of the print the eye goes, so do the sloping lines become more unnatural. When the eye wanders sideways while looking at the original subject matter every upright is vertical because as soon as it is *seen* it is automatically in the centre line of the vision and therefore appears upright. A similar sketch appears at the top and it has been improved by showing that while the eye remains in a fixed point on the figure, the lines nearest that point are sharply defined and as they approach the outside they become less sharp. But photographic purists say that unless all verticals in the picture space *are* vertical, like the lower sketch, it is bad technique. What are we to do? Shall we portray our verticals as the eye sees them in one position only (No. 1) or in dozens of different positions (No. 2) which looks as unnatural, just because it is to be reproduced on a print, a flat surface? It is impossible to say. The ideal would be to compromise and show something like the third sketch where we have a slight convergence and all tell-tale borders to the print are removed. But this is not practical. It is better to decide whether the print is to be impressionistic like No. 1, or to be conventional like No. 2, and conform to each.

Tilting the camera is not always a bad fault. We have seen that it is only too obvious when *straight* verticals are included, but when we have irregular verticals like a tree trunk or vase, etc., then it doesn't matter so much. A change from the conventional is always refreshing and gives us new ideas, the only road to progress in pictorial photography.





On Mounting the Print

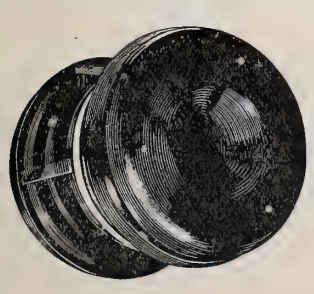
WHEN the print has been trimmed ready for mounting there is a big temptation for the beginner to use an unusual type of mount and sub-mounts, and to adopt a freakish mode of placing it, thinking perhaps that this will improve the appearance of the print and give it a more impressive effect. Nothing could be farther from the truth.

The print should always be regarded as complete in itself and be capable of being judged alone without a mount. The mount then serves partly as a support for the print, as a surround to keep the print aloof from neighbouring prints and, perhaps most important of all, that the attention will be undivided when looking at the print, the mount borders serving to keep out all distracting details.

So it will be seen that the quieter the mount and an orthodox position for the print will give *greater* emphasis to the print. Use only light-toned mounts. Very seldom is a dark tone necessary, even for night subjects. If a sub-mount is to be used allow only a narrow border to show and its colour should harmonise with both print and mount. Discreet titling and initialling should also be observed. Letters one-eighth of an inch high are sufficient for most prints up to 10×8 in. The two comparative sketches show how a print can be spoilt by freakish mounting.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.



Messrs. Kodak Ltd. have recently issued an interesting booklet, free on request, entitled "Picture Taking Indoors." It gives much useful information in connection with the use and arrangement of Photoflood lamps and Sashalite bulbs, together with suggested exposures when using Kodak film. This little book should be of considerable interest to all who wish to take indoor portraits or figure studies.

Messrs. Ensign, Ltd., of 88–89, High Holborn, W.C.1, announce a new folder, free on request, entitled "Aids to Better Home Movies," which contains particulars of their range of accessories for film-makers. These are available for the first time in the 8-mm. and 9.5-mm. sizes.

A ciné department has now been opened by Mr. R. G. Lewis at 202, High Holborn, London, W.C.1. This new venture is staffed entirely by those who have specialised in sub-standard ciné and talkie work, and will be quite distinct in personnel from the Miniature Camera department. A well-furnished theatre has been installed where callers may compare performances of every type of modern sub-standard projectors and talkies, the stock of which is unusually complete.

The General Electric Co., Ltd. announces a reduction in the price of Sashalite photo-flash bulbs. These are reduced to 1s. 3d. large size, and 8d. baby size.

The "Vent-Axia Silent Six" Air Extractor is worth the serious attention of all photographers requiring an efficient and silent ventilating fan for the dark-room, and with the additional advantage of being entirely light-tight. The "Vent-Axia" is a well-designed piece of apparatus, made entirely of bakelite, including the blades of the fan, and it can be fitted easily to the window, door or wall of any room. It is actuated by plugging into a wall plug or lamp socket. The "Vent-Axia" is taken apart for fitting, one half being adjusted to the outside of the room and the other to the inside, and is fitted through a hole made in a convenient wall or door. If the structure is too thick, the two halves can be fitted to a steel plate, and the steel plate is then fitted to a suitably-made aperture through the door or wall. The rotor is designed on the most modern principles, is perfectly balanced for smooth running, and the entire apparatus is very light. The motor is supplied in all voltages, A.C. and D.C., is perfectly silent and vibrationless, and consumes only 10 watts. The measurements of the outside casing are $9\frac{1}{2}$ in. diameter; when fixed the over-all depth is $7\frac{1}{2}$ in. The price of the special dark-room model, which is completely light-proof, is £5 5s. The "Vent-Axia" is made by Utilities (London), Ltd., Walton House, 1, Newman Street, London, W.1, and is obtainable from The Camera Co., of 52, Cheapside, London, E.C., who have been appointed distributors for the apparatus.

A new photographic society is in course of formation at Clapton. Those who are interested should communicate with Mrs. Betty Stephens, at 25, Warwick Road, Upper Clapton, E.5.

Photographers from all parts of the world are invited to enter exhibits for the forthcoming 29th Scottish National Salon, which is to open in the Art Gallery and Museum, Perth, on February 20th, 1937. Entries for the exhibition are to be in by January 23rd, the latest date for receiving pictures being January 26th. Mr. J. Campbell Harper, Edinburgh, and Mr. Alex. Keighley comprise the board of selectors. A section of the Salon will, as usual, be confined to Scottish workers. There will also be a lantern-slide section, and a section devoted to scientific, technical and record prints or slides. The Salon Secretary is Mr. John J. Robertson, Perth, to whom application should be made for further information and for entry forms.

Open to all.—The Clapton Miniature Camera Club are organising a "Night Ramble" round London on Friday, December 4th, meeting at Charing Cross Underground Station at 8.45 p.m. All miniature camera users are invited, but non-members of the club are expected to contribute 1s. towards organisation expenses. Further details, both of the Club and of the Ramble, can be had from the Organising Secretary, 7, Alcester Crescent, E.5.

Mr. E. Harrison, of 40, Mayville Avenue, Scarborough, has been awarded 21s. for the prize-winning print in the latest Wallace Heaton Open Competition. Full particulars regarding this weekly competition appear regularly in our advertisement pages.

Users of the Pathéscope "Ace" Projector for 9.5-mm. films will be interested to learn that the makers have introduced a "Super Attachment" enabling them to exhibit films up to 300 ft. in length. The attachment is priced at 10s. 6d.

We are advised that the new Secretary of the Stretford Camera Club is Mr. J. Taylor, 43, Ruskin Avenue, Moss Side, Manchester. The membership list is open, and all interested in photography and any amateurs in the neighbourhood may have full particulars from the secretary at the above address.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is $5\frac{1}{2}\times3\frac{1}{2}\times3$ and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d. post free.

52. RELATIVE EXPOSURES WITH CAMERAS OF DIFFERENT SIZES

TO maintain the same angle of view over a series of cameras of different sizes, the focal length of the lens must bear the same relation to the dimensions of the picture in each camera of the series.

Since the shapes of the various pictures may be different, the diagonal of the picture is taken as the measure of its size in this connection.

The smaller the camera, therefore, the shorter the focal length of the lens.

The shorter the focal length of a lens the greater its depth of focus, or, alternatively, the less it needs to be stopped down to attain the depth necessary for any particular subject. On the smaller camera, then, apertures may be much wider. So long as the large aperture is available, it follows that for comparable results *the smaller the camera the faster it is.*

The table shows the relative apertures and exposures required for cameras of different sizes, it being assumed that the angle of view, the depth of focus, and the ultimate sharpness of the negatives are such that an enlargement made from any negative is indistinguishable from an enlargement of equal size made from the $3\frac{1}{4}\times2\frac{1}{4}$ film taken as standard.

Size of Plate or Film.	Relative Exposure.	Relative Stop.
$6\frac{1}{2}\times4\frac{3}{4}$ ($\frac{1}{2}$-pl.) ..	1/6th	f/16
5×4 or $5\frac{1}{2}\times3\frac{1}{2}$ (P.C.)	1/10th	f/13
$4\frac{1}{4}\times3\frac{1}{4}$ ($\frac{1}{4}$-pl.) ..	1/14th	f/11
$3\frac{1}{2}\times2\frac{1}{2}$	1/20th	f/8.8
$3\frac{1}{4}\times2\frac{1}{4}$	**1/25th**	**f/8**
$2\frac{1}{4}\times2\frac{1}{4}$ (6×6 cm.) (12 on $3\frac{1}{4}\times2\frac{1}{4}$ film)	1/35th	f/6.3
$2\frac{1}{4}\times1\frac{3}{4}$ (4.5×6 cm.) (16 on $3\frac{1}{4}\times2\frac{1}{4}$ film)	1/50th	f/5.6
4×4 cm. (12 on V.P.)	1/80th	f/4.5
4×3 cm. (16 on V.P.)	1/100th	f/4
24×36 mm. (35-mm. ciné film)	1/135th	f/3.5

Some further aspects of depth of focus in conjunction with camera size are discussed in an article on page 563 of this issue.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

D. & P. WORK.

SIR,—I have followed with some interest the correspondence in your columns on D. & P. service. The bulk (quite 80 per cent) of the work offered, particularly that turned out by many large firms, is definitely rubbishy. Some firms seem to favour over-developed films printed on super vigorous paper, others, "grassy" or muddy effects in the prints, while if a pan. film is handed in one can confidently expect to have it returned together with a generously rich coating of fog.

As a worker in the photographic trade I am of the opinion that the root cause of all this bad, indifferent and outrageously mucky work is not lack of knowledge or indifference on the part of firms concerned, but the grossly overworked and underpaid conditions under which the employees of the majority of such firms speed and sweat. As an instance, a friend of mine, an expert bromide enlarger, was this summer working for one of the large London firms. He was making enlargements of varying sizes from miniature negatives, his hours were 8 a.m. to 9 p.m., six days a week, and his (weekly) "reward" averaged a few shillings over three pounds. The average expert lady gaslight printer thinks herself lucky if she gets more than 45s. for a week, the working hours of each day touching the upper and lower limits (8 a.m. to 8 p.m.) permitted by the Factory Acts. Another friend of mine, working this summer for a northern firm, put in a seven-day week, worked on occasion till midnight, and received £3 per week.

I think that the point I am endeavouring to make is sufficiently clear, and further encroachment on your valuable space unnecessary.—Yours, etc., MAURICE BAKER.

SIR,—In connection with the recent correspondence concerning the relative merits of English and Continental D. & P. work, the following experience may perhaps throw a little light on the matter.

At a French seaside resort last summer I got into conversation with an Englishman who was running a library, teashop, etc., for English visitors. He told me that he had given up taking D. & P. work (which he farmed out) because of the impossibility of finding in France a firm who would do the work well enough to please the German visitors.

He told me that while his English and French customers would accept over-contrasty prints with finger-marks, scratches and other blemishes, and make no complaints, any German offered an imperfect print rejected it with scorn, while if a German's negative was damaged his indignation and fury knew no bounds.

If some of your correspondents have been having their D. & P. work done in Germany, where the standard would appear to be very much higher than in England, their dissatisfaction with English processing is very easily explained.—Yours, etc., HENRY BLAIR.

WHAT IS A MINIATURE CAMERA?

SIR,—I have read the correspondence on this subject with great interest, as an answer to the question is long overdue.

To me, the most extraordinary letter was that from Mr. Schauffelberger, in which he erected an elaborate but rickety scaffold, and then instantly kicked it down. He proceeded thus:—

(a) The whole question depends on the focal length of the normal lens used on the camera.

(b) The normal focus for 6×6 cm. film is 9 cm.

(c) Therefore 9 cm. is the maximum focal length allowed on miniature cameras.

(d) But if instead of the maximum 9-cm. lens we use a 15-cm. lens this does not matter, because the film is still 6×6 cm.

Then why in the name of all that is illogical drag in the focal length of the lens at all? It has no more to do with the case than the cost of the camera or the birthplace of the photographer's mother-in-law.

I put it that the first step is to decide on a maximum area, which we may call x square inches. Then a miniature camera is one which has given a negative a *contact print* from *the whole* of which does not exceed x square inches.

Who is to decide the value of x?

I suggest that if this were done by the new Miniature Group of the R.P.S. their ruling would be adopted by most of those interested.

If x were 5, this would include $2\frac{1}{4} \times 2\frac{1}{4}$ negatives, as the actual print would not exceed 5 square inches.

A friend asked me what would be the ruling if he exposed a ¼-plate with a $2\frac{1}{4} \times 2\frac{1}{4}$ mask in front of it. My answer was that it would still be a miniature negative, as the contact print would not exceed 5 square inches. The waste margins are no more negative than they are positive.

Then he asked why he could not expose the whole of the quarter-plate, and print from a $2\frac{1}{4} \times 2\frac{1}{4}$ part of it. My answer was that a contact print from the whole negative would exceed 5 square inches. If we were allowed to select a "miniature" area from a larger negative it would give us an almost unlimited variety of selection. Hence the definition I have suggested.

Mr. Schauffelberger agrees with me, although he may not admit it.—Yours, etc., W. L. F. WASTELL.

TROUBLE WITH SPOOLS.

SIR,—Your correspondent "The Nomad" evidently got spools of film intended for cameras such as the Kodak Six-20, which takes smaller spools than the standard. The Kodak film for this camera is clearly marked 620 while for the regular Kodak it is 120. If "The Nomad" would take greater care in purchasing his spools he would not experience any trouble. In the Selo series of films these special spools are indicated by the prefix letter Z before the number—thus, Z20 is No. 20 film on small spool. Films numbered 20 are on the standard spooling and will easily fit his camera.—Yours, etc.,

"ONCE BITTEN."

ELECTRIC DANGERS.

SIR,—I refer to the contribution by Mr. D. Aldwyn James on page 228 of the issue dated 2nd September, 1936, and would point out that the arrangement shown contravenes the I.E.E. Regulations.

On page 18 of the 10th edition, paragraph 207A states:

"In a two-wire installation all non-linked single pole switches shall be fitted in the same conductor throughout, which shall be the conductor connected to an outer or phase conductor, or the non-earthed conductor of the supply."

Mr. James refers to the switches as being double pole. They are, of course, single pole (one way and two way, respectively), controlling only one side of the supply—which should be the live side.

With the switches as shown a man standing on a stone floor making an adjustment to one of the lamp-holders with the switch A in the off position, could easily obtain a fatal shock.

Reverse the connections to the mains, putting the switches in the live conductor and then the switch A cuts off the current and leaves the system connected to earth and therefore safe to handle.—Yours, etc., WM. R. CROOKES.

THE OPTOCHROM TANK.

SIR,—May I be allowed to corroborate the remarks of Mr. H. W. Armstrong in a recent issue *re* the "Optochrom" tank? I have used one of these for about two years, and with every success, *provided* the makers' instructions are strictly adhered to, i.e., the backing paper *must* be drawn out *very slowly*. Occasionally, I have experienced trouble in not being able to separate the paper from the film at the end, but if I tear off at the slot, push the end back with a thin knife-blade and turn the funnel to the right the end usually enters the tank all right. I have once or twice had uneven development, but this has been my own fault in not agitating the developer frequently. Now all the time the film is in the tank I either frequently turn the funnel from right to left, or move it up and down. I also occasionally gently rock the tank. If these actions are all strictly carried out the tank is perfectly satisfactory.—Yours, etc., (MISS) G. COOKE.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Acting and Amateur Films

By S. E. L. M.

THERE are several reasons why the majority of cinematographers choose to make films in which acting is entirely or almost entirely dispensed with. Perhaps the most significant is that the older story material of most acted productions is out of touch with the realities of life—and yet lacks the saving grace of deliberate fantasy. Then the players in both these and other films have not always been directed with sufficient skill to bring out the best of which they are capable.

However, it is possible that—with the rapid development of the new "fiction" film—most lingering tendencies of amateurs to waste good stock on rubbishy stories will dwindle away through lack of interest and support. As a recent contributor truthfully observed in these columns, "Our job as amateur cinematographers is to see life steadily and see it whole."

But the task of getting the best out of film actors is one that cannot be dismissed in so few words. It is one that tremendously concerns amateur directors and cameramen alike—since there is not the slightest doubt that the film performance of any given player depends as much upon their understanding as upon his own ability.

Camera-consciousness.

Much of this understanding must be used to relieve camera-consciousness—which is not a nervous disorder affecting only a small proportion of amateur film players. It troubles nearly all people whose fate it is to act pantomime before the ciné camera. And it embarrasses practised players in the professional studios as well as those less experienced actors upon whose services most amateurs must perforce rely.

Nor is this entirely surprising, for there is something in the very explaining of an actor's part which makes him think about it—and nothing is more prone to destroy the natural effect of a perfectly simple act than to create a consciousness of it. For most simple acts are subconsciously performed, and only a subconscious performance can yield the optimum effect.

So the first duty of a director is to strive for sub-conscious performance. In many cases, this may be secured by taking the shot before the player is aware of the fact. In a great many others, where such a procedure is obviously impossible, the director must be prepared to carry out persistent rehearsals. Three or four rehearsals (which frequently constitute the limit to which directorial patience will endure) are usually insufficient to establish a natural performance. Rehearsals must go on and on, patiently and without despair, until all traces of camera-consciousness have disappeared.

Then may the camera be brought into play, though here again it is not always desirable to acquaint the actors until the difficult "take" has been secured.

Types and Players.

In film planning, much has been considered about the primary suitability of "types" as opposed to experienced players. Certainly, films like "Man of Aran" and "The General Line" set up a sound case for the argument; but it must also be admitted that the "type" is often extremely camera-conscious, needs more fundamental rehearsal, and cannot so easily keep his eyes from wandering in the direction of the recording instrument.

Nevertheless, untrained characters are frequently desirable for "character" parts—for which it is difficult to obtain experienced players. Classic examples of the "type" are Eisenstein's "Martha," and Flaherty's "Tiger King."

Camera Work.

Naturally, much of the screen value in a player's work must depend upon the manner in which it is recorded. Viewpoints in full keeping with the dramatic purport of his action are essential—and must be worked out to precision before the commencement of filming. Even in cases where this may appear to be optional, viewpoints may still be used to accentuate certain of an actor's features (as Jack Hulbert's chin and Mr. Durante's nose, to mention only comedy).

Lighting also plays an important part, and again it remains for the cameraman to consider the effect this aspect of his work will have on the performance as a whole.

Finally, the key to success in all camera work is perseverance—and particularly in photoplay production is the truth of this to be appreciated.

The river, London's busy thoroughfare, is almost certain to find a place in any film dealing with London life. In December murk and August sun alike, scenes combining life and movement with pictorial beauty can be found everywhere up and down the riverside.

Hints on Projecting Colour and a Suggestion for a New Screen Material

By J. C. GREEN.

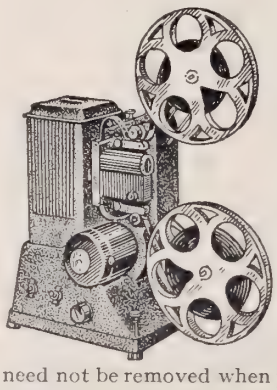
"A.P." readers who have tried out Kodachrome or Dufaycolor films during the holiday season will have a number of spools ready for projection during the winter evenings.

To do them justice, care should be taken in the projection, and the choice of a suitable screen deserves consideration. Generally regarded as the Rolls-Royce of screens, the crystal-beaded type suffers from one disadvantage, where a large audience is concerned. Seen from the side, a loss of brilliance is noticeable, compared with a view from behind the projector, and with colour the *quality* also suffers to a marked degree. The popular silver screen, so useful with modest powered projectors, has a similar tendency. There is no doubt, where the finest reproduction of colours is desired, a white screen is best.

Many recipes for making a white screen have been given, but I have yet to find anything to approach a material known as Jaconet. It is a proofed fabric, with a brilliant white eggshell surface, and, like Blank's Patent Pills, is "sold by all chemists" as a surgical dressing. The quality known as "B.P.C." costs about half-a-crown a yard, 44 in. wide.

It should be tightly stretched on a wooden frame, when any creases will disappear in a few days. It can then be used, on the frame, or fixed to rollers for portability.

An advantage is that it can be cleaned with a damp sponge, and retains its whiteness splendidly; mine has seen several years' use and is as good as ever.



A very important point is to run the projector at the correct voltage. The *quality* of the light affects the colour rendering to a marked degree, and varies with the voltage applied to the lamp.

Scenes in colour can be viewed longer than those in monochrome, without becoming tiresome, and it is useful to know that colour films bear projection at a slower speed than black-and-white, without showing flicker. Shots in which there is little movement can advantageously be slowed up a little, when it is desired to prolong them.

A final hint. Show your black-and-white films first, keeping the colour until the end of the show. They will not then spoil the former by comparison.

The "Specto" Projector for 9.5-mm. Films

THE new "Specto" 9.5-mm. projector is an English-made instrument that will appeal to many amateur cinematographers who work this size as a sturdy piece of apparatus, effective in use and sold at a reasonable price. It is attractive in appearance and easy to use. The body is cast of aluminium alloy, and has a green crackle finish. It uses a special 30-volt projection lamp, the necessary transformer for which is enclosed in the base of the instrument. The gearing is contained in a metal box, and runs in an oil bath. The shutter has two blades, one large and one small, and makes three revolutions per frame. The projector has a double-claw mechanism, engaging with two perforations at a time, which tends to lessen the chance of damaging the film. The gate is readily detached for cleaning. The rewind is motor driven and is put into operation by a clutch. It is advisable to remove the belt from the take-up spool while rewinding. The belts need not be removed when putting the instrument away, as the spool arms fold in such a way as to keep them at approximately constant tension. The motor cannot be stopped without switching off the lamp, thereby protecting the film from over-heating. The lens, which is a 35-mm. f/1.7 projection lens of British make, throws a well-defined and brilliant picture, and the instrument is reasonably silent and flickerless. The 9.5 cinematographers who are contemplating the purchase of a new projector for Christmas will be interested in the "Specto." The projector costs £11 17s. 6d., and is obtainable from The Camera Co., of Vauxhall Bridge Road, S.W.1, who inform us that they are the sole agents until Christmas, after which the instrument will be released to the trade generally.

Exhibitions and Competitions

CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of November 25.

Wallace Heaton "Open Competition." Cash prizes every week. Open to readers of *The Amateur Photographer* only. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Borough of Ealing Public Libraries Photographic Exhibition and Competition.—December 9–10. Open to all residents in the Borough. (M. L. Hodges Librarian, Hanwell Public Library, London, W.7.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Open November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Entries, December 15; open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition of Pictorial Photography.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Western Eighth Annual Salon of International Photography.—Entries, February 1; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire

Birmingham P.S. 46th Annual Exhibition.—Entries, February 6; open, February 27–March 13. (E. H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.

City of London and Cripplegate P.S. Thirty-second Annual Photographic Exhibition.—Entries, Monday, February 8; open, March 8–13, 1937. (R. C. Dye, Reservoir View, New Mill, Tring, Herts.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9; exhibits, March 1; open, March 3–6. (Walter Selfe, 24, Pembury Road, Clapton, London, E.5.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.)

St. Petersburg C.C. Second Annual Pictorial Salon of Photography.—Entries, February 26; open, March 3–17. (R. Kendal Williams, 602, Snell Building, St. Petersburg, Florida, U.S.A.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Eighth International Salon of Photographic Art (Brussels).—Open daily (except Fridays) from April 3–18. (M. Devaivre, 152, rue Markelbach, Brussels, 3, Belgium.)
